Subject: Intellectual Dishonesty

To be clear, I am against the refusal to allow pharmacies in Alaska to fill orders for Ivermectin and the Chloroquine drugs and the outright refusal of hospitals to administer these drugs, if ordered by a doctor, to patients infected with the Covid virus if they chose these remedies.

I am a Professional Engineer, licensed in this state to practice just like you. I am not unfamiliar with public comment and the regulations for licensure. I am fully familiar with practices of science. I have seen the rhetoric going around and the letter from Merijeane Moore knocking the folks looking for ways to promote preventative treatment for Covid. Maybe you are like her and think that the only way for prevention is the non-FDA approved treatments the government is prescribing. But I would try to appeal to your sense of intellectual honesty and consider that there may be treatments other than non-FDA approved treatments that might actually help against Covid. I hear the terms follow the science all the time. But for my 30 years in Engineering I have never considered that my way was the ONLY way. When you do that you actually are going against science. I won't venture to try to dissuade you from listening to Merijeane, but I would also urge you not to ignore other bright people that might have another solution to the problem. Let the free market work. If people want to get the vaccine and think that will ultimately help them, that is their decision. If there are people like me that think there are other better ways, you should not bet against us, if you are intellectually honest with yourselves. If people chose to try alternative medications that are actually FDA approved for use in humans over those that are not, that should be their decision. And actually, as doctors, per your Hippocratic Oath that should be your default stance. And if this Board rules against anything other than that choice of your patients, then God help you in the coming days.

Michael Willmon, my PE License # is AELE-10405 and I will be watching for your response to the upcoming Board Meeting.

primum non nocere

Subject: Support for Early Treatment of COVID-19

Dear Sir/Madam of the Alaska State Medical Board,

I am writing in support of the effectiveness of early treatment for COVID-19. I have been a beneficiary of early treatment protocols. Most significant to me, is that my father, who is currently undergoing chemo treatments and has been battling cancer most of this pandemic, tested positive for COVID-19. This had been a concern for our family, of how his body would handle it, would he be able to fight it off? I am so grateful to a doctor who immediately got him started on ivermectin, monoclonal antibodies, and several other supplements, that within 10 days he was fully recovering. This is not the narrative being reported, or heard, but his body had every reason to not respond well.

It pains me to think that the hospitalized and death count would be even higher, had so many in this city not had early treatment intervention, or hadn't been already supporting their immune systems, to be stronger and fighting off any viruses that would come their way.

These doctors coming under trial should be looked at as a resource for treatments, if the metric is to keep Alaskans out of the hospital, and from dying, they are leading the way. These doctors prescribing early treatment options are working for the benefit of the patients that they have taken an oath to care for.

Thank you,

Brandy Payne

Subject: Covid Early Treatment

Dear Alaska Medical Board Members,

I am writing in support of Alaskan doctors who prescribe early treatment meds, including hydroxychloroquine and ivermectin, for their Covid patients. It is awful to think that doctors who prescribe early Covid treatment based on well known protocols may be censored or punished for treating their patients. These brave doctors are already facing an uphill battle just for their patients to actually be able to get the meds they prescribe from local pharmacies, now they have to fight the medical fascism of other doctors not agreeing with them? It's very normal for doctors to have different approaches, it's pretty abnormal I'd say for doctors on one side of an issue to try to shut down doctors on the other side by lobbying the state medical board to pull their licenses. This is abusive and wrong.

I would like to point out that patients are choosing early treatment, no one is mandating or forcing it on them, in fact, patients may have trouble finding early treatment even if they want it because of Doctors like Dr. Leslie Gonsette threatening to go after the licenses of doctors who prescribe according to early treatment protocols. I personally sought early treatment when I had Covid. I, like many others, am far more comfortable using drugs with known safety records off label than taking an experimental vaccine, or waiting it out at home until I can't breathe (thank GOD some doctors are willing to try something). Doctors prescribing early treatment have earned the right to practice, just as much as those with a different approach, please continue to let them treat

patients. We have every reason to try to keep people out of the hospitals- by the time covid patients are sick enough to be hospitalized their chances of survival are not good. Please respect individual medical freedom rights for patients to seek early treatment, as well as a doctor's right to treat his or her patients as they see fit.

Thank you for your consideration in this matter,

Kelly Pendley, RN

Subject: Dr. Farr hearing

To whom it may concern-

If this state board is trying to dictate a prescribed treatment and limiting the opinions of doctors or peoples ability to receive prescribed drugs, it is a terrible travesty.

People need free choice over their body's. I do not pay taxes or support any government position that limits freedom.

If in your arrogance you think it is your job to dictate to people what to do with their body you are just another form of dictator and will eventually be put down by the people. If not in this generation then the next.

"I will not be ashamed to say "I know not," nor will I fail to call in my colleagues when the skills of another are needed for a patient's recovery"

"I will remember that I remain a member of society, with special obligations to all my fellow human beings, those sound of mind and body as well as the infirm."

In all integrity,
Brandon Sandstrom

Subject: Public testimony for November 19, 2021

Hello, My name is Michelle Hotchkiss.

I am writing in support of Dr. Farr and Dr. Nolte and they're early treatment protocol for. Covid-19.

I am incredibly thankful these dedicated drs are willing to help people who are suffering when other medical professionals have denied them early treatment for covid. This has resulted in LESS complications and hospitalizations. This is something we all want, correct?

I personally have experience with a different local Dr my family has gone to for years, who outright lied to us when all we wanted was true information to help sort out fact from fiction. This Dr said the ivermectin was only for horses, in a very derogatory manner.

It took me about 30 seconds for me to do an internet search for the history of ivermectin, which clearly showed the history of HUMAN Ivermectin, and then came the crushing reality that our Dr flat out lied to our face.

Instead of being honest with us and explaining why human ivermectin should or should not be used for treating covid-19, politics have infiltrated this Dr and how she practices medicine.

It also showed us loud and clear she cannot be trusted to give true and honest medical advice or treatment.

So now I must decide who to trust. As it turns out, I trust my real-world experience. I have been in the midst of active covid-19 infections several times while helping care for sick family members, and have not become infected. No masks, but general things like hand washing. I have not had covid-19. What I have had is hydroxychloroquine for the last 2 years for rheumatoid arthritis, as well as the most common daily vitamins.

Either Covid-19 isn't as infectious as the medical profession makes it out to be, or hydroxychloroquine has some level of protection against it. Which is true? Well, I do believe it is pretty contagious, and hydroxychloroquine is the only difference between myself and the Covid-19 sick family members.

I have more real-world experiences that include consecutive stays at 3 different hospitals, for different levels of care ranging from ICU, to the next lower level of care, to extended speciality hospital care, and to skilled nursing home for the last 1 1/2 years. During most of this time, there was no vaccine. The medical and hospital staff were all exemplary in their careful protection from Covid-19 without the vaccines.

As for the vaccine, I've noticed all the claims of safety seem to omit any statements about it's long term safety. Will you go on record and make a clear and truthful statement on the long-term (2 1/2 years, 5 years, etc) safety of all the Covid-19 vaccines? Please do, I'd love to hear it. Also include how the vaccines long term is established when it hasn't existed for the long term?

We also all know that vaccine break-through cases are increasing, and the vaccinated are being hospitalized. Be honest about the breakthrough cases and also that the vaccinated can still be contagious and spread Covid-19.

Since the number of break through cases requiring hospitalization is increasing, why not give them the opportunity for early treatment so they don't end up critically ill?

How can it be ethical to force the vaccine yet deny other treatments with meds that have already passed the test of time and attack drs who prescribe those medications?

It is completely wrong, unethical and frankly horrific, to see the medical community withholding medications and treatments in order to force people to get the vaccine. We all know fewer people would choose the vaccine if they had other choices.

Please do not punish these drs for giving people a choice.

This outright attack on drs for providing care that is different than the "politically correct", yet is safe, effective and meets the goals of keeping people out of the hospital is outright wrong.

Drs politicizing a patient's medical treatment and lying to them is wrong.

Pharmacies denying drs prescriptions is wrong.

Denying early treatment with human ivermectin/hydroxychloroquine is wrong.

Denying critically ill patients in the hospital the opportunity to try ivermectin is wrong.

Denying proven safe and inexpensive medications to people are crimes against humanity.

If it wasn't for politics, none of this would be an issue. Please remove politics from our healthcare.

Thank you, Michelle Hotchkiss

Subject: Meeting Nov. 19,2021

To whom it may concern,

I am astounded at the utter ridiculousness of Anchorage psychiatrist Merijeanne Moore as well as any and all who continue to fight against and even go as far as to refuse, proven treatments for Covid-19! There have been so many doctors SUCCESSFULLY treat Covid-19 and SAVE Millions of LIVES, often times with simple vitamins and mineral supplements! As far as Ivermectin and hydroxychloroquine go, these medications have been around for a good long time and have proven to be successful in saving lives of covid-19 patients. And yet hospitals are REFUSING these drugs as well as vitamins and minerals??!! You can't get much more absurd than that!! And for what? The almighty dollar or power? Natural cures can't be patented and money made off of them and so they are the refused? This is so sad, doctors that actually strive to make people healthy are ridiculed and even threatened! This needs to stop! I plead with you, don't allow greed to be the force that rules, allow these good doctors to do their jobs! Don't take their freedom to prescribe what they've proven time and time again, heals! Don't let people suffer and or die while claiming that these new vaccines, which don't even prevent covid-19 or the transmission of it, are the only option! Millions of people have beat covid naturally with our own, God given immune systems, aided by vitamins & supplements, that really make a huge difference! To ignore natural immunity and claim that anyone who goes against "the narrative" is spreading "misinformation" while pushing an experimental vaccine IS MISINFORMATION in and of itself! The science of natural immunity didn't suddenly change. The science of getting enough vitamins, as well as the patient outcomes of these good doctors, can't be ignored simply because it doesn't fit well, make enough money, or control people. When doctors have success, meaning save lives and keep people from being admitted that is SUCCESS!! After HELPING & HEALING is what doctors are supposed to do!! And some ACTUALLY WANT TO!! Taking individuals medical choice away goes 100% against basic human rights.

In addition, **Article 7 of the International Covenant on Civil and Political Rights, which was adopted by the United Nations, PROHIBITS experiments conducted without the "FREE CONSENT to medical or scientific experimentation" of the subject.** Please see the common sense and logic and do what is truly right and don't stop these doctors from helping and healing their patients who have choices. Please don't be part of this society that is striving so hard to take all that is good, right and free from Americans.

Thank you for your time and please consider these things.
On behalf of myself and my family,
Kathie Dorland

Re: Early Treatment of Covid-19

November 16, 2021

To the Medical Board of the State of Alaska:

I am writing in regards to the current discussion about early treatment of Covid-19 and the proposal to revoke licenses of local doctors that have been practicing early treatment.

1. In all my 70+ years, it has been the norm to suggest that once you've gotten one medical professional's opinion, you were free to seek a second, third, or as many additional opinions as you wished. Then you could choose to follow the prescribed treatment plan of whichever one you chose. It could be assumed there would likely be differences of opinion. This current situation is beyond comprehension; that a physician would face having a license revoked for having a different opinion and treating their patient accordingly.
2. Currently, through both the refusal of pharmacists to fill prescriptions for medications for early treatment (regardless of their published status as an "essential" drug and safe use world-wide) and the refusal of hospitals to administer these medications prescribed by attending physicians, patients are being denied their right to make an informed health-care choice. The physician / patient relationship is completely undermined, with treatment being pre-determined by policy with no regard to the patient or the physician.
3. Hospitals and other providers that refuse to administer Ivermectin prescribed or requested for the treatment of Covid-19 are ignoring the fact that the NIH lists Ivermectin as a possible treatment for Covid-19. See: <https://www.covid19treatmentguidelines.nih.gov/tables/table-2e/> They are also in violation of the "Right to Try" law which applies to any and all medical procedures prescribed by the physician.
4. For every other disease known to man, early treatment has been the standard of care. We've been urged to do multiple early screenings for early detection for many diseases and then to get early treatment, with the belief that recovery will be more likely and much quicker. But with Covid-19, we are advised to go home, do nothing and wait until we need hospitalization before any treatment is begun. At that point and with current treatment protocols, recovery is much less likely. It defies logic that the experience of tens of thousands of doctors around the world engaging in early treatment (including brave local physicians) is ignored and discounted as "mis-information" when actual statistics from real doctors treating real people indicate the efficacy of early treatment.
5. The fact that the US, arguably the nation with the highest standard of health care, with only 4.5% of the population of the world, has had 25% of the Covid-19 deaths worldwide should cause an immediate re-evaluation of the CDC's prescribed protocol. They are obviously more successful elsewhere in the world, following different protocols (most including Ivermectin and Hydroxychloroquin). India, home to 1.38 billion people, has a death count of 464K while the US, with its population of 329.5 million (23.8% of India's), has a death count of 763K (164.4% of India's with only 23.8% of the population). WHY?

6. The fact that the CDC's prescribed protocol is incentivized with a 20% bonus for ignoring all other treatments and prescribing the exponentially more expensive Remdesivir is an outrage. See: <https://www.cms.gov/medicare/covid-19/new-covid-19-treatments-add-payment-nctap>

7. See the article linked published by the NIH in August, 2021 entitled "Ivermectin: a multifaceted drug of Nobel prize-honored distinction with indicated efficacy against a new global scourge, COVID-19". The conclusion states "We believe that the evidence to date supports the worldwide extension of IVM (Ivermectin) treatments for COVID-19, complementary to immunizations." <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8383101/>

8. Dr. Peter McCullough, editor of two major medical journals, most peer-reviewed, published Dr. in the world in his field (Cardiology & Nephrology) joined with world physicians early in the pandemic to explore treatments for Covid-19. August 8, 2020 they collectively published "Pathophysiological Basis and Rationale for Early Outpatient Treatment of SARS-CoV-2 (Covid-19) Infection". He, along with many others, contends that with early treatment using appropriately prescribed off-label conventional medicines, hospitalization for Covid-19 can be cut by 85%. He has 47 peer-reviewed publications about the infection and has testified in the US Senate Committee on Homeland Security and Governmental affairs, the Texas Senate Committee on Health and Human Services, Colorado General Assembly, New Hampshire Senate, and South Carolina Senate. Within two days of his March 10 testimony to the Texas Senate, legislation was introduced mandating that information on early treatment be provided to every positive Covid-19 patient. His March 10 testimony can be viewed here: <https://youtu.be/QAHi3IX3oGM>

9. "A man who has an argument is always at the mercy of a man who has an experience." I have several personal friends (Alaskans) who were quite ill with Covid-19. Once they were able to get prescriptions filled for the early treatment "cocktail" of drugs, they reported marked improvement within hours and a quick, full recovery.

10. Dr. Robert Jackson, a good friend and practicing physician for 40+ years, addressed the South Carolina State Medical Affairs Subcommittee on September 23, 2021 advocating for fellow physicians. He is an intelligent, well-spoken, ultra-gentle physician who cares deeply for his patients. He is facing the loss of his position because he dares to treat his patients with Ivermectin and to speak out as an advocate. This board would do themselves, Alaska's physicians and the people of the state of Alaska a great service to listen to his comments and apply them to this situation. https://rumble.com/vmvgwz-dr.-robert-jackson-rips-those-trying-to-control-his-covid-treatments.html?fbclid=IwAR1iSO0_eknfrPTosnSXv6NSQZmzsJehTeZJrsx8YyX4jv2vQs0SPRScxws

In summary, it is in the best interest of the people of the State of Alaska and in keeping with our American ideals that our Alaskan physicians be allowed to practice medicine using every treatment means available. Early treatment should be at the forefront of our response to Covid-19 and information about it published to every person receiving a positive test. The preponderance of data shows these treatments cannot be withheld, in good conscience. Imagine if we'd instituted early treatment at the beginning and hospitalizations / death were decreased by the projected 85%. Instead of the 815 deaths recorded as of today, it would have been closer to 122. And we know that at least some of those 815 or their families begged for these treatments and were denied.

And along with active early treatment, the integrity of the physician / patient relationship must be renewed and our systems of cooperation between physicians, pharmacists, and treatment facilities restored.

Thank you for your time and commitment to our great State of Alaska.

Sincerely,

Kathleen A Conn

Subject: Physicians Medical Licenses

I support Dr. Farr and Dr. Nolte in their efforts to inform the public concerning medical options for Covid-19. They should not be facing lose of there Medical Licenses, just for informing the public that there are medical options that are available other then what are considered Best Practices by other Physicians.

When I was born I was given only one year to live, I am 67 years old today. I was a guinea pig for many medical procedures that are used every day. Should those Physicians have lost there Medical License for what they did? I can guarantee you that the procedures I had were not Best Practices, but are now consider Best Practices today.

I would hope that pharmacies in Alaska would fill a Physician order for Ivermectin and Choroquine if I choose this medical treatment after discussing all Covid-19 options. If I have to be in the hospital I would expect the hospital to follow my Physician order for Ivermectin or Choroquine, these medications are my choose to treat Covid-19. As I am one person that cannot take the vaccines due to allergies I should not have to worry about what would happen to me if I need hospitalization. Each and everyone of use have the right to choose what medications are used on treating illness and the medical community should respect the patients decision regarding their health care.

When is it that one treatment for all is the Best Practice? The medical community is to do no harm, if you are a person like myself, the Best Practice, is not the Best Practice for me.

I would hope the Physicians would realize that there are many different medical treatments for all illness. The Alaska Medical Board should understands and acknowledge that patients have choices when it comes to medical treatments and Physician should follow the patients wishes. Why are other Physicians so upset regarding other Covid-19 Treatments? Dr. Farr and Dr. Nolte should not lose their Medical Licenses, for helping the general public understand there medical options or prescribing medications that have helped patients and countries with Covid-19.

Subject: Anchorage doctors saving lives

Anchorage medical board,

I am sending this email as a citizen in Alaska who believes in not censoring and creating villains out of doctors that use repropounded drugs like ivermectin and HCQ to help with this SARS COV2 virus. There is actual scientific data and not just newspaper articles and main stream narratives that prove this is effective. When have we ever previously treated medical professionals this way on this scale. There are 100 thousand doctors and nurses who clearly have shown they are censored and the truth on alternative treatments is being hidden.

The question that really needs to be asked and looked at is why are most people who do not go to the hospital not doing of SARS COV2 and it's when you go to the hospital very sick because they don't even prescribe preventative medicine that you die. When is someone going to say the government forced NIH protocol at the hospitals is not working because we are killing people that come in but people that don't stay alive.

On science. SARS COV2 is so bad in anchorage but not in Wasilla? You need a mask to walk through the restaurant but then sitting down it isn't there? Same with office work. People can just look around and you do not see sick people and when in history have asymptotic people been contagious and treated like sick people. This is a huge crime on humanity and please do not be if it's not too late part of the organizations and people that will no longer be respected or trusted by the people you are supposed to help and protest from your oath to do so.

Unfortunately I'm sure I can research almost everyone on this panel, hospital main management the government officials including Dr.Zinc and just follow the money. Alaska with its last frontier and robust mind set should be one of the states leading this effort. In the end it will all become transparent Andy the truth will be down. Please defend and look more so into the protocols being forced by a government agency instead of critical thinking doctors and scientific data.

Thank you,

Shawn Tolman

Subject: Doctors Being Vilified For Prescribing Ivermectin for Covid

Hello,

It has come to my attention that you have been asked to investigate doctors for early treatment protocols for Covid-19 which include prescribing Ivermectin.

There is overwhelming evidence that Ivermectin is safe and effective in the prevention and early treatment of Covid-19. (see attachments) If you do not trust the attached sources, please look at the actual studies included in the attachments.

Overdosing and poisoning is the result of people taking Ivermectin without a doctor's supervision. Doctor's need to be able to prescribe Ivermectin and pharmacies need to be able to fill the prescription without being vilified. If people cannot get a prescription, they will take animal formulations or get it off the internet which seriously increases the chances of overdosing and poisoning.

Early treatment protocols, including Ivermectin, could be instrumental in reducing the effects of Covid-19 in Alaska. They have worked very well in places like Uttar Pradesh, India.

The Alaska Medical Board should consider establishing early treatment protocols for the prevention and early treatment of Covid-19.

Thank You,

Brian F Bates

Subject: Testimony

Medical Board of Alaska,

I am writing today in support of Doctors in Alaska who are/have been providing early treatment for COVID-19. They are effectively reducing the number of would-be-hospital patients because of early treatment protocol.

On a personal note, I had COVID-19 at the end of September/early October of this year. I had read several early treatment protocols. I hoped that rest and a combination of vitamins/supplements would be enough to kick it off. My condition worsened and I thought I may need to go to the hospital. My oxygen level kept dipping into the mid 80's. On day 12, I finally received ivermectin. After one day of treatment the 12 day high fever (off and on) went away and I started feeling better. Day 2 of Ivermectin, I could finally move more than a few steps, and the cough was subsiding. Every day I saw improvement. I am in my 50's, physically active, and generally very healthy. I am not on any maintenance medications and have no health issues, so it was a shock to me to be hit so hard with the virus. I am thankful to the doctor who prescribed ivermectin and to the pharmacy willing to fill the prescription. I believe it was a lifesaver.

It is important the Medical Board remembers that 20% of outpatient prescriptions are written off label. For instance, beta blockers are prescribed for migraines. It's been this way for many, many years. It's not unusual for a drug meant for the treatment of a specific ailment to also benefit the treatment of a different ailment.

Lastly, it would behoove the Medical Board to remember that patients have a personal right to early, effective treatment - whether or not the treatment is "proven." Residents of Alaska have a right to choose what kind of treatment we receive, as well as what we may choose to refuse.

My prayer is that the Medical Board of Alaska will be inundated with letters of support for Doctors offering early treatment for COVID-19, and that the board comes to the decision that it will help Alaskans thrive by allowing Doctors the freedom to truly care for their patients.

Sincerely and Very Respectfully,

Lisa K Hydock

--

Lisa K. Hydock

Subject: Ivermectin and hydroxloroquin

Hello

I fell ill with Covid and after seven days ended up with Covid pneumonia and the local Fairbanks doctor here put me on prednisone Aretha myosin and albuterol.

At the same time my family member heard that about my condition, concerned, and a friend of there's brought me ivermectin and hydroxycloquin. And, said albuterol is not strong enough and put me on Pulmicort instead.

I was very sick. But when I started this cocktail of medicines within 24 hours I was feeling much, much better. And was healed by the time my doses were done.

If I hadn't taken these medicines I would've ended up in the hospital! How do you believe what main stream medical is doing, I believe what is working, and now I am in example of that.

You know, it used to be that doctors could use whatever worked. And now licenses are being pulled for trying medicines that work. Doesn't that say something to you? It goes against everything I've ever known of the medical field. And that smells like a rat.

India gave their entire population ivermectin and they are Covid free. Doesn't that say something to you? And you can't tell me that wasn't true because I saw it on oneAmerican news and it was confirmed by a friend of mine from India.

Please, DON'T pull licenses of doctors who treat their patients so that they have a fighting chance. This is all about money and depopulation and your fight against your own who have signed the hypocratic oath

and is indication of implication of something sinister, not something in our best interest. The vaccine causes autoimmunity, inflammatory disease and a host of other horrible things including death.

I do not ascribe to the mainstream medical agenda because of the idiocy of its track record based on family and friends testimonies of their horrendous experiences and outcomes that have not been favorable, even to life altering side affects of approved treatments to even death.

So having my experience and hearing others (friends and families) testimonies; those are much more reliable to me than your word. Your word has become untrustworthy to me and apparently many, many others.

Why are you hellbent on punishing doctors who are looking at the history in the here and now and using what works. And since when in the past did doctors ever get censored, restricted and punished for treating their patients how they see fit? Again, this is wrong and it's unprecedented.

I'm asking you to please wake up and remember why you signed the hypocratic oath and separate yourselves from the sinister development of what's happening in Alaska and in America ; the greed of big pharma, and depopulation of America in the attempts to control us and destroy free America. This is not just about a virus. It's much bigger than that and you all have sold out on things I don't think you understand accept what your being told. Do your research. Just because your doctors, doesn't mean you have all the answers.

Sincerely, Traci Marrs

Subject: Preventative treatment awareness

My husband and I recently had Covid in September. It was tough and tough but nothing we couldn't handle and unfortunately there are so many people who needed medical treatment. I wasn't hit as hard as my husband with the struggles he had. On day 10 of being sick he called a friend and was recommended ivermectin. It was a matter of less than 24 hours and he made an appt and was able to get this treatment. It saved him from going to a harder path. Within a day of starting this treatment he was so so much better. I had come home from work and my husband had cleaned the entire house to a typical clean house that he likes to have but hasn't been able to do for 10 days since he was sick and I still lacked energy from having Covid prior to him. You can't deny the impact ivermectin is doing. I seriously press the issue this medicine works so please let's those that want to treat patients with it do so and those that don't don't have to.

Thanks

Aubrey

Subject: Covid treatment

Hello,

I am an Alaskan and I would like to voice my concern regarding the refusal to allow pharmacies in Alaska to fill orders for Ivermectin and the Chloroquine drugs and the outright refusal of hospitals to administer these drugs if ordered by a doctor, to patients with the covid virus. Additionally, cannot stand by and allow any establishment to stack the deck with testimony only supporting this refusal of hospitals to treat early intervention with proven drugs and not allowing patients their right to choose.

It is not exceptable to have social distancing, masking, and vaccination that is not 100% effective as the only means of early intervention. When patients are expose and begin to experience covid they go to a hospital only to be turned away if they fail to need oxygen and are sent home to quarantine. Alaska is failing those patients tremendously. These are the patients who later return so sick that they now need intubation and multi organ support as natural compensatory responses are failing because medicine turned them away!

We should be helping them early with proven interventions such as ivermectin should the patient and medical doctor feel the patient will benefit from this. Also, I have never in my life seen a medical professional so against vitamins and their helpfulness in supporting the bodies natural responses in times of illness until this virus came out and I fail to see how this is the only time they would not be helpful. For any medical board stating this I would shame you, as it is well known nutrition and supporting the bodies natural responses to occur are extremely beneficial to recovery processes.

Subject: In support of medical freedom

To the Alaska Medical Board,

I urge you to send a clear message to the entire state of Alaska and support Dr. Farr and Drs. Nolte and the medical freedom that they have offered to Alaskans. Their success in treating COVID patients is a testimony of their adherence to the physician's oath, unlike the hundreds of doctors that have withheld Ivermectin and Hydroxychloroquine and as a result have sacrificed so many Alaskans on the alter of big pharma. It is also a grave injustice that local pharmacies in Alaska are refusing to fill orders for Ivermectin and Hydroxychloroquine and the outright refusal of hospitals to administer these drugs, if ordered by a doctor. Alaskans urge you to not allow the big pharma controlled establishment to stack the deck with testimony supporting the refusal of hospitals to treat early intervention with proven drugs and not allowing patients their right to choose.

Respectfully,

Debraly Gamache

Subject:

Alaska Medical Board

I am writing in regards to the upcoming public meeting this Friday to address providers that participated in the Early Treatment Summit.

I do not recall a time in history when many were so eager to shut down the dissenting opinions of others to the point one would threaten the livelihood of another provider. Especially, when it comes to early intervention.

As a Christian, I ask if there is one who would stand up to mob rule. God, put you in your position for such a time as this.

As I understand, Alaska is a "Right to Try" state. There is no proof of physical harm for which these accusers can produce. They can only argue theory and ideology, which each provider should be entitled to. How many times have you yourselves been desperate to help a patient, and incorporated any tool available. Is it not generally accepted that early treatment and prevention is preferred? These providers claim they can offer proof of favorable outcomes for their existing patients.

I find the refusal to allow pharmacies in Alaska to fill orders for Ivermectin and the Chloroquine drugs and the outright refusal of hospitals to administer these drugs, if ordered by a doctor, to patients infected with the Covid virus to be asinine.

I would also like to bring your attention overall provider shortages in our nation, Alaskan's being very pronounced. Your decisions will likely have great effect in maintaining status quo or exacerbating that issue. Alaska has great difficulty attracting providers and already has a limited resource. If you go after these providers, how many more will you be forced to eliminate? How many will leave the state in favor of states that are more supportive to Physicians autonomy? How heavy will the burden be on the remaining providers and already depleted health care staff? How many more will leave because the burdens are becoming too heavy? I suspect there would be a great increase in poor outcomes for the health of the population as a whole due to the ridiculous division within our health care community that is leaving one group attacking another in order to shut down differing opinions rather than engaging in open and respectful discussions.

I thank you for your dedication to the position of authority that you hold during a particularly difficult time.

Respectfully,

Lisa Bouyea-Francies APRN

Subject: Early treatment

My question to everyone is; why aren't doctors treating people who have Covid with some medication? I and my husband have both had COVID and not one doctor or nurse gave us any advice for treatment. Even when you have the flu a doctor will tell you the best method of treatment. I am 71 years old and I believe people have been fed such a dose of fear that they have forgotten that doctors are supposed to treat a illness before you get to the hospital stage. The good doctors that the "100" are complaining about have been the only doctors to treat the virus before the person gets to the hospital. Maybe if the "100" had treated people before they got to the hospital stage more people would have lived.

Subject: Re: Drs. Nolte and Dr. Farr

Alaska Medical Board:

Respectfully,

I request careful consideration for physicians who treat covid patients with alternative methods. Alaskans are free thinkers and deserve to be treated professionally and privately according to their needs as discussed with their physicians.

As medical leaders you are tasked with oversight but do not and should not put restraints in place for doctors because they treat their own patients differently from medical norms.

The unknowns of Covid 19 should give latitude to physicians just as the State of Alaska allows choice for vaccinations the medical board should allow choice for doctors to treat patients as determined in joint consultation.

Stripping an Alaskan physicians license should be as a last resort for negligence and malpractice.

I implore you, the SOA medical board to allow doctors to treat covid 19 with restraint to their methods.

Please DO NOT sanction the professionals in our community but allow them to practice with solutions that work.

Thank you for your consideration.

Subject: Dr. Farr & Drs. Nolte

Dear Medical Board of Alaska:

I can not believe what is happening in our world - and now our own state of Alaska.

Dr. Farr, whom I had an appointment with recently, and Dr. Nolte are some of the very best of the best doctors we have in this great state.

They have taken an oath to "do no harm" - and they have remained faithful to this oath, to their own detriment, and have, furthermore, stood strong against the rising tide of persecution of truth.

We live(d) in a free country where we once celebrated differing opinions, challenging each other's ideas, and presenting tried and true evidence, as truth emerged from the midst of it all.

Today, however, truth can not be found.

Somewhere in the midst of this plague, one, unchallenged doctor, fueled by politics and agendas - speaks out, and dictates protocol, and all must now bow. What is happening?!?

The truth is, their protocol is not working and, for many, has become very dangerous and - this oath of do no harm - has been trampled upon.

We, the public, are begging for truth and evidence to be allowed a voice in our midst once again.

These are the doctors who are fearlessly standing up for truth, and the freedom of truth that has been sabotaged by the giant in the land of "big pharma," and those selling their souls to her.

It is evident that people begging for drugs that help, are denied. Pharmacies are denying the right to have prescriptions filled. And doctors who know that these drugs have indeed helped thousands of people, are hailed as quacks and are pursued and hunted down so as not to offer any evidence and hope of the healing truth.

The question we must really ask ourselves, is why????

Dr. Farr and Drs. Nolte have stayed true to the oath they vowed. They have done - no - harm - to anyone, except maybe the agendas forced down our throats by the rising socialistic agendas where our CHOICES are being stolen from us every - single - day.

As a citizen of Anchorage, for 52 years now, I'm calling upon this board to have the courage to stand against the agenda in the land- and allow truth to prevail. Follow the evidence. Hear our voices.

I, for one, believe that we should be allowed to have the drugs, especially in very life-threatening circumstances, that we want.

These poor people that have cried out for ivermectin, on their death beds, and were denied their dying wishes - should be heard now. What a crime against them!!!

What did Providence Hospital, or any other medical institution, have to lose, by allowing them their drug of choice on their death beds?!?! NOTHING!!

The street people of Anchorage are allowed their "drug of choice" on the streets, and given clean needles!

Yet a dying man, in a hospital, that touts itself as Catholic, god-fearing, refuses treatment - that has helped so many people. How can this be happening in this America!?? God help us all!!!

I'm begging you to allow these wonderful doctors the freedoms we once knew, to continue to help me, and thousands of others, as they are truly doing no harm, but only helping, and saving lives.

Thank you for this freedom of speech, and your time. We must now trust these great doctors, their medical licenses and their very lives in your hands, and beg you to do the right thing, for all of our sakes.

Respectfully,

Carol McKinney

Subject: Medical Freedom

Alaska Medical Board,

I write in support of Dr. Farr and Dr. Nolte and others like them who advocate for early intervention for Covid-19. I urge you to listen to their testimonies and see their outcomes and consider how many people they have helped in the last 2 years of this pandemic.

The doctors who are bringing Dr. Farr and Dr. Nolte and others like them before you no doubt **think** that they are doing the right thing. They have been deceived. They are distracted and blinded by the "protocol" and are refusing treatment that will help their patients until it is too late. It is a sad day when any doctor who prescribes anything other than a vaccine would have their medical ethics called into question. It is a shame that Dr. Farr or Dr. Nolte would be called before you. Their mission is to help. They are heroes of this pandemic and have worked long hours and have gone above and beyond to advocate for their patients.

These doctors have taken their oath to "do no harm" seriously. They are fighting a good fight to treat covid as early as possible, which has been proven to have the best possible outcome for overcoming covid and not ending up on a ventilator. These doctors are intelligent people who are doing what is best for their patients. DO NOT let them be silenced or disciplined because they choose life-saving treatment.

I strongly urge you to SUPPORT these doctors. They are standing up for Alaskans who are unable to receive a vaccine or who know that a vaccine is not the only answer. They are helping so many people. They are a voice for people who do not want their medical freedom taken from them. Listen to them. Advocate for them and protect their freedom to practice medicine to the best of their abilities. They are a fighting a good fight for Alaskans!!

Sincerely,
Lacey Pastorek

Subject: November Board Meeting Public Testimony

Hi,

We are Alaskans who are VERY concerned about the way COVID treatment is being handled. We fully support early intervention treatment. We both had COVID and got early treatment and saw a huge improvement with the treatment. Unfortunately we were denied Ivermectin and couldn't get it. What are the side affects of ivermectin that make it so dangerous that it should be withheld as a treatment? Is it actually science or is this politically driven? It doesn't sound like ivermectin is a dangerous treatment. It seems like some of the members of the board are politically motivated in this decision. We have heard about local doctors being threatened that they will lose their license if they prescribe it. This is outrageous that you would threaten them. As if you know what works and what doesn't?? These doctors have had huge success with early intervention treatment and we have seen it first hand. We hope you will listen to reason and support these doctors right to prescribe what they believe helps. People that I know are actually stocking up on horse dewormer because they are desperate. Why not allow people to have the correct medicine that has very little risk? We will be watching the meeting and hope to see some reasonable action taken.

Thank you,
Jacob & Heather Klapak

Subject: Medical Freedom for Doctors

To Whom it May Concern:

Doctors need to be able to try different things for different people and that should include being able to prescribe off label uses of medications. One size doesn't fit all. I have seen and experienced the effectiveness of off label use of medications. Pharmacists should not be allowed to stop the use of these meds as well unless there is a issue with interaction from other meds and then it should be consulted with the prescribing doctor. Again-- do not hinder a doctor from prescribing off label use of medications for treatments of their patients. I'm not referring to narcotics (that is something I'm unaware of at this time). During this pandemic I have read about pharmacists and medical boards harassing, denying, and discrediting doctors who have prescribed a variety of medicines in an attempt to treat covid 19 patients. Yet- these doctors are having a positive outcome. I've read about it with cancer as well. Stop harming us by disallowing our doctors from doing their job. Make insurance companies support a doctor's effort and a patient's choice.

If any of your attacks are with Dr Farr -- know that she has been several of my family members' doctor and I would trust her with my own medical treatment. Let her practice without harassment or hindering her ability to use off label medications to treat covid 19 or other illnesses such as cancer.

Sincerely,
Hiedi E. Miller

Subject: Covid

Hello,

It is not ok for some doctors to take their opinion of what is "best practice" and force it on other doctors. It is not ok how hospitals are refusing to treat Covid with Ivermectin and Hydroxychloroquine. I personally took Ivermectin while I had Covid and it greatly helped me. If a patient is prescribed one of these medications it is not ok for the hospital to refuse it. It's a prescription with doctors orders. For any person or any facility to refuse it clearly shows it is no longer about helping the patients.

Come on Alaska Medical Board, where did your morals go? When did you stop caring for your patients. If a prescribing doctor thinks one of these meds could help, why would you go out of your way to refuse to administer it to patients.

Sickening.

Subject: Early Treatment for Covid

Dear Medical Board,

It is a tragedy that so many Alaskans are left without early treatment for Covid when there is clear and abundant evidence that early treatments are safe and effective.

My husband and I have just recently recovered from COVID-19. We tried to seek early treatment but the pharmacists in our area refused to fill our prescriptions for early, safe treatments. We find this deplorable. We ended up having to have a pharmacy mail them to us. The prescriptions will arrive later today, now that we are essentially recovered. Thankfully, my husband and I have been supplementing with Vit D and other immune boosting supplements and we are young enough that we were able to recover without early safe prescription treatments but had we been in a high risk group, the outcome may have been different.

In a country that should have the best available treatments, the medical experts in authority are simply ignoring the availability of lifesaving re-purposed drugs and actually the use of these lifesaving treatments is actively being blocked. How many people will our medical system deny treatments to? How many people have to die unnecessarily? This will only change when public health officials embrace the scientific evidence of the many options for early, safe, effective treatments.

Please make policies that help to save lives. Early treatments are essential and have been proven to work.

Sincerely,

Brandy Nelson

Subject: Public comment for upcoming meeting

Greetings,

This attachment is in regard to the recently circulating "Action Against Provider Misinformation."

Thank you for your time and consideration.

Frank

Dear Alaska State Medical Board:

This is in response to the circulating physician letter regarding "Action against Provider Misinformation."

I am a small-town, born-and-raised Alaskan. I am an ICU nurse. I've worked in an Anchorage ICU taking care of Covid patients since the start of this pandemic.

The public appeal for fellow physicians to sign this letter and send criticism to the State Medical Board, along with the continued creation of a media circus, perpetuates public mistrust in healthcare and further leads to the division of co-workers, friends, family and community.

A fellow nurse recently told me that if they had two patients, and one was vaccinated and one was not, they would go in the vaccinated room first. Appalling.

Healthcare is a job that is done without judgment or prejudice. We don't choose who we treat first or better. Our care does not depend on whether the patient is a drug addict, an alcoholic, morbidly obese, or simply non-compliant with their care plan. They have that CHOICE.

Whether we like to admit it or not, this a politicized process. What happened to getting second opinions in healthcare? What has happened when we think there is only one way to do things?

We all do our best to provide evidence-based medicine, but we are living in a real-time pandemic. Our "science" has been fluid since the beginning. We have insufficient time for real evidence-based practice. What we are doing for patients in the hospital is not working. We have no idea why some people are asymptomatic and some people get sick and die, vaccinated or not. We are not helping people in the hospital other than providing them with supportive care. We don't know how to turn these patients around.

Covid care is a fluid science. When a physician develops a medical plan for a patient, he/she weighs risks and benefits, reviews available evidence, draws from past experience, and takes into account patient preference. For instance, in assessing a patient with cancer, one doctor might recommend aggressive care with chemotherapy, while another might recommend hospice. Neither are necessarily wrong. It's not an exact science and there is no one-size-fits-all solution.

That is why we ask for second opinions and not second facts. When using evidence-based medicine in treating patients, the medical team relies on different levels of evidence and grades of recommendation. Frequently, care is based on multiple levels of filtered evidence.

Now, are physicians going to have to consider the current political climate of the particular hospital they work at for fear of putting their livelihood in jeopardy or having their reputation slandered? This echoes of political persecution and we fail the community with this division.

The audacity of a fellow physician to tell another physician scientist that they will be written up or lose privileges because they have a different set of beliefs is appalling. Please, take a stand and do not allow this division to occur.

Subject: response to Dr. Gonsette's complaint

To Whom it May Concern:

I read with some concern and sadness the ADN article that wrongly accused Dr. Ilona Farr of spreading misinformation about the Covid vaccine, thus asserting that Dr. Farr is putting her patients' lives at risk.

I'm a retired grade 3/4 teacher, so I don't know a lot about medicine, but there are some things I do know.

Dr. Farr has been my family's doctor for over 15 years. During that time she has successfully treated my broken ribs, numerous bouts of strep throat, multiple blood clots in my leg, out of place SI joint and a variety of other ailments too numerous to mention.

When I visit Dr. Farr's office, I always feel very cared for by Dr. Farr and the staff that she has assembled around her. Her care for her patients goes beyond what I've experienced with any other doctor.

Like I said, I do not know a lot about medicine, but I do know this. My wife was diagnosed with Covid in late September. Dr. Farr prescribed hydroxychloroquine and ivermectin and within a week, my wife was able to successfully teach her online class. Dr. Farr's prescription worked.

When my family has had medical problems, Dr. Farr has always known the right thing to do for us and has treated us in a kind, compassionate way.

That is what I know.

Alaska Medical Board

re: censorship of vaccine/virus facts/opinions

11.15.21

Dear Sirs:

I spent a lot of time last evening thinking about your proposal to strip an Alaskan doctor of her medical license. What has she said?

1. Natural immunity is better than vaccinated immunity. Fact.
2. Early treatment is better than late hospitalization. Fact.
3. Informed consent is not being made available to people getting the jab. Fact.
4. The vaccinated are more likely to incubate more hostile variants than unvaccinated. Fact.
5. Biden, Fauci, the FCA, the CDC the Press, the Social Media all have lied repeatedly, or withheld data, and are operating more as politicians, than for the health of the nation. Opinion.
6. The mandate calls for vaccinating those with natural immunity and healthy young people whose risk/reward dictates that they should not be vaccinated. Opinion.

You are looking at taking away her medical license. Are you willing to get up from behind your Medical Board, and step into the light and accept a debate format to defend your positions? IF you cannot, then you must resign from this board. If you will not defend your decisions in public, then you cannot take her medical license from her. Its that simple.

Sincerely,

David Cuddy

Subject: Medical right to try

Dear Medical Board,

It has come to my attention that “best practices” is defined as the guidelines put forth by one institution, the CDC. Unfortunately the CDC has failed to provide protocols for early outpatient treatment of COVID-19 and has lost substantial credibility by making frequently contradicting changes in their policies. It is my belief that especially during this COVID-19 pandemic, “best practices” should be based on evidence from various sources including institutional, worldwide and expert opinion. Furthermore under guidance from qualified healthcare professionals, use of repurposed FDA approved medications for treatment of COVID-19 should be considered.

It has come to my attention that your scheduled meeting will explore the possibility of revoking Alaskan doctors’ licenses who practice early treatment of COVID-19. The Alaska Legislature passed legislation which gave Alaskans the “Right to Try.” This was not exclusive to cancer patients, but includes any medical treatments your doctor prescribes. This medical board is not above the law.

Subject: Support for Doctors Farr and Nolte

To the Medical Board of AK,

1. It is my understanding that the board will be meeting this week.
2. I am offering my sincere and strong support for Doctors Farr and Nolte.
3. There is an transparent attempt to censure and/or punish these doctors (and others who treat C19) for practicing sound medicine according to their clinical discretion. There is also an attempt to silence any dissent among health care providers regarding the early management of C19.
4. There is strong evidence for effective and early management with off label and extremely safe medications. These agents are inexpensive and have shown a high degree of efficacy in treating this disease and minimization of morbidity and mortality.
5. Now is not the time to bend the knee to political pressure when lives and suffering can be reduced predictably with the early diagnosis and management of C19 and all its future iterations.
6. I strongly urge you to resist the temptation to go along with those who want to see health care dictated by politicians. This vindictive and malinformed effort will cost more Alaskan lives.

Subject: Dr. Farr ad Nolte

To whom it may concern,

I'd like to express my support to brave American doctors for doing what's right and saving hundreds of lives by going against corrupt FDA and CDC.

For the past year and a half, corrupt media has been silencing all medical opinions and alternative treatments for recent outbreak of seasonal Coronavirus. Medical freedom of choice has been briefly taken away from the people and now is being restored. With your help and support let's bring America back to its glory and restore constitutional rights of the people.

Please support your doctors, as not many have left out there with dignity and decency to do good!

Thank you for your time and hopefully you'll do right for everyone's sake. Our children's future is at stake.

Regards,

Taras Shpyrka

Subject: medical hearings Dr Farr, Drs nolte

Medical board, Pharmacy board, Medical providers, Governor Dunleavy and Residents of Alaska, Recent challenges to the medical community with the Covid pandemic have resulted in numerous opinions about how to help and what NOT to do for people in need of treatment.

I have had the benefit of guidance from Alternative Medical doctors for over two decades, including receiving medical advice in the event that we become ill with Covid

Recent events have prompted the Medical Board and certain pharmacies to challenge the treatment recommendations of certain medical personnel. Dr. Farr and Drs. Nolte have been subject to unusual scrutiny in their medical practices seemingly because they don't conform to recommended, standard, normal medical protocols.

Do we/ you, really want to force these medical providers into a standardized box of medical practice?? OR worse yet, remove their license to practice medicine?? These two docs are willing to try methods to

save lives, save lives, save lives. They may be using treatment methods that you do not agree with!!
They think outside the box of standardized medical protocols to save lives.

Consider this: If medical providers never thought outside the box or never tried treatments besides what was learned in medical school.... We might still be thinking that the cause of deformities and diseases are the result of, sin, offences against our maker, God.

If we never thought outside the box, we might still be placing leeches and bleeding patients to heal them.

If no one ever thought about things differently we might still be thinking that the sun revolves around the earth.

If we thought that mercury/ amalgam dental fillings are a great material to repair broken down teeth, most dentists would still be placing a known neurotoxin into teeth

Doing things the same way all the time and expecting different results is redundant, fruitless and insane. Thinking of different ways to solve problems, treat diseases and invent new devices are ways to change and progress.

Consider all the innovations that have happened from one goal i.e. President Kennedys challenge to place men on the moon

Consider all the possibilities that science fiction writers have presented i.e. Devices, products and treatments in the Star Trek series. Some are already a reality I,e satellite phones, full body scanners. Scientists that propose new theories and inventors think outside the box.

From time to time we need to consider other possibilities, I,e think outside the box. The options to try alternative treatments should be for everyone, not just cancer patients

Are we so stiff necked that we expect everybody to conform to the norm, same or standard method of thinking?

Please do not persecute these medical providers that think differently.

Walk Worthy and teach others,
Dr. Greg Bragiel- Anchorage, Alaska

Subject: Allow doctors to do their job!

Medical Board,

It has come to my Attention that our doctors are under attack for prescribing ivermectin and /or hydrochloroquine. These drugs have 100s of peer reviewed studies that show safety and efficacy. You and I both know this is a political fight. I urge you to allow doctors to do their jobs. Pulling people's license for political gain completely goes against the Hippocratic oath.

I am very concerned about the doctors, pharmacists, and hospitals that are refusing this treatment and allowing people to die. Please urge pharmacists to fill the doctors prescriptions! And protect our doctors who are making decisions based on science and prescribing ivermectin and hydrochloroquine.

Thank you,

Holly

Subject: Board Meeting Nov 19th - Early Treatment

Medical Board,

I work closely with a primary care doctors office with multiple doctors.

Alaska shot to the top of the COVID 19 Hospital Admissions in the nation **roughly two weeks after this board informed doctors not to use ivermectin.**

I strongly urge the board to issue a reversal of the earlier letter concerning ivermectin and encourage doctors to use every available tool to solve this pandemic.

Every available tool includes vaccinations AND the early treatment of SARS COV-2.

Also, pharmacists are refusing to fill scripts for the treatment of the disease and have stated to doctors they are reporting them because the doctors wrote scripts for Hydroxychloroquine.

This is crazy! Both Ivermectin and Hydroxychloroquine have better safety profiles than Acetaminophen.

Sincerely,
Bill Lemmons,

Subject: Treatments for COVID

To Whom It May Concern:

I'm writing in response to doctors in Alaska that are being chastised and possibly have their medical licenses taken away for honoring their hippocratic oath and doing all they can for treating their patients with COVID.

We have medications on the market that should be tried to help treat patients with COVID. Doctors research and discuss with each other medications that have worked for various illnesses. Medications that are no more harmful than taking an aspirin. Everyone has the right to decide with their doctor what treatments to take for their illnesses. This isn't a case of a bunch of rogue doctors intentionally trying to harm their patients.

The COVID shots are not the end all be all. It has been proven that they don't prevent the virus. Scientists don't truly know all the effects of the shot, short term or long term that it can have on people. They have not gone through the true scientific method of years of safety data to know whether they are truly safe. There are thousands upon thousands and counting of VAERS because of the shots. By suppressing a doctors ability to care for their patients with any means necessary is unethical, immoral, cruel, and just plain wrong. Patients along with their family members should be able to decide with their doctors how to best treat their illnesses with any medication on the market. By disregarding legitimate claims of medications being used to treat COVID that have worked is irresponsible.

Please allow all doctors to do their jobs and help their patients, rather than tying their hands.

Sincerely,
Sara Scoles

Subject: Persecution of real Alaskan doctors

I cannot believe you are even considering any kind of action against Alaskan doctors who are saving Covid patients that other doctors and hospitals have no interest in treating until patients are half dead and so ill they go to hospital and so often die.

There are PROVEN early treatments, by many doctors across America, by real doctors, heroes, who have acted to save their patients when the medical establishment offered ZERO treatment, and merely advised those sick with Covid to go home and quarantine... Then to come back to ER when they became so sick they were almost beyond any help.

Why did you people show ZERO interest in early treatment? Why did you not listen to doctors on the front line, who were successfully treating and curing Covid patients using safe, cheap and effective remedies like Hydroxychloroquine, Zinc and Vitamins C and D? Why are you persecuting REAL doctors who only want to save their patients?

Why do you continue to push a so-called 'vaccine' that not only fails to stop people getting the Covid virus, but fails to stop them spreading it? Why are you ignoring the increasing numbers of people in America dying and becoming very sick as a result of taking the Covid vaccine? Why are you ignoring the Science? Why are you ignoring the facts? Reality?

Please stop persecuting those great doctors who are keeping to their Oath and beyond 'first doing no harm' are actually risking their jobs and their medical licenses to do the right thing and save their patients.

These doctors are heroes and deserve far better than being treated the way the media abuse them. Anchorage Daily News... CNN... and the rest... They have their agenda... and it is NOT on the side of truth, reality, science or ordinary people.

These hero doctors deserve honor and praise, if not a medal, for their dedication to their patients and refusal to abandon them to the lies, half-truths and consistent lies from the media and the lies coming from the likes of CDC, Dr Fauci and Biden.

Please do your job, listen to your conscience, and reject any action against these brave Alaskan doctors. Remember that We the people, the ordinary people of Alaska, will remember your decision. Lives depend on it.

Subject: Right to try

If Alaskans are getting sick, and early non-invasive treatments are available to help keep them healthy, it is unconscionable to stand in the way of a person's health. If the medical board limits access to treatment, the medical board should be held liable for the outcome.

Threatening doctors with the possibility of revoking Alaskan doctors' licenses who practice early treatment of COVID-19 is not lawful. The Alaska Legislature passed legislation which gave Alaskans the "Right to Try." This was not exclusive to cancer patients, but includes any medical treatments your doctor prescribes. This medical board is not above the law.

Subject: Outpatient treatment for COVID-19 in Alaska

Dear Medical Board,

It has come to my attention that the upcoming meeting on November 19, 2021 will explore the possibility of revoking Alaskan doctors' licenses who practice early treatment of COVID-19. The Alaska Legislature passed legislation which gave Alaskans the "Right to Try." This was not exclusive to cancer patients, but includes any medical treatments that an Alaskan doctor prescribes. The relationship between a patient and a doctor is sacred and the Alaska State Medical board should have no jurisdiction

over this relationship, especially when the CDC has failed to provide effective protocols for early outpatient treatment.

I am writing the board to ask you to consider early outpatient treatment of COVID-19 infection including vitamin supplementation for optimization of the immune system, monoclonal antibody treatment and repurposed FDA approved medications. Please allow Alaskan doctors the right to prescribe medications which are safe and have been shown to be effective in decreasing the risk of serious life-threatening outcomes related to COVID-19 infections. Ivermectin and hydroxychloroquine, when administered at proper doses, are effective and safe treatment options and are used worldwide. Despite the main stream media's best efforts to discredit ivermectin, the CDC itself lists the drug as an integral part of its program for U.S. bound refugees. It also recommends it as a presumptive therapy for all refugees originating from the Middle East, North Africa and Latin America.

Dr. Farr has used early treatment for over 720 Alaskas who have suffered from COVID-19 and has a 99.8% success rate in preventing serious outcomes. If the Alaska State Medical Board takes action against Alaskan doctors, who advocate early treatment, rest assured you will have a substantial outcry across Alaska and lives will be lost.

Thank you for your consideration in this matter.

Respectfully,

Quentin Lange

Subject: Covid-19 protocol

I am writing in support of Alaskan doctors who provide a different protocol from the current pharmaceutical, government and media driven standard.
No disease is one size fits all and the treatments shouldn't be either.
Health treatment decisions are between people and their doctors, and having government involved in mandating treatment protocols should be considered practicing medicine without a license on government's part. Suppressing treatment alternatives equates to mandating protocol, and suppressing treatment alternatives at the request of other doctors seems sketchy, at best.
I believe that encouraging 2nd or even 3rd opinions and having options in regards to anything creates a much healthier and educated population.

Subject: Medical Board Quarterly Meeting Testimony

Good morning -

According to the "Alaska Watchman" and other sources, I have been made aware of a very disturbing possibility of the Alaska Medical Board examining and possibly removing the license to practice medicine from some local doctors practicing alternative medicine. This in my opinion endangers not just those successfully treating patients with COVID-19, but also those successfully treating other patients using other alternative treatments for other ailments.

There have been many studies showing the success of early COVID-19 treatments:

<https://c19ivermectin.com>

Yet, the majority of the medical community discounts the evidence. Is it because of the funding from the Pharmaceutical companies, CDC, and FDA? \$38,000 for every patient on a ventilator? We know what the AMA is telling everyone; <https://www.ama-assn.org/delivering-care/public-health/what-fda-wants-doctors-tell-patients-asking-ivermectin>. Tell your patients to get the vaccine. Unfortunately, Dr. Fauci told everyone last week, the vaccines are not working as planned and now "trust us" you need a booster. The FDA and the Biden Administration has broken trust with Americans multiple times over the last 2 years. If the Alaska Medical Board chooses to limit the alternative care options, treatments will go underground and reduce the trust of the medical community EVEN MORE!

Must the care and treatment of humans be politicized like so many other subjects in our world today? Humans are dying. Every option MUST be considered, not hindered. The 2018 "Right to Try" Act (<https://www.fda.gov/patients/learn-about-expanded-access-and-other-treatment-options/right-try>) should be considered by the FDA for Ivermectin. Unfortunately, we are ALL aware of the new billionaires being created since the beginning of 2020 and Ivermectin will not add to them.

We are told over and over to "trust the science", but when the "science" inconveniently doesn't match the FDA or CDC rhetoric, it apparently cannot be trusted. Reports of successful use of Ivermectin are available from around the world.

Please reconsider your thoughts of hindering the work of these brave honorable doctors.

Respectfully,
C.J. Koan

Subject: Censuring Doctors

To the Alaska State Medical Board,

Doctors swear an oath to do no harm, but now a group of doctors are trying to stop others from treating their patients.

I believe this is blatantly harmful!

Personally, I critically think about what's best for my health. I do not judge others about what's best for them.

I believe what these doctors are trying to do would be a clear violation of my rights as a free citizen to determine between myself and my doctor what's best for me!

If you had chickenpox, I'm not giving you a chickenpox vaccine. If you've had measles, I'm not giving you a measles vaccine.

When you are immune, why unnecessarily increase your risk for other problems, especially for an experimental RNA gene therapy injection?

And if people are sick, you treat them.

We know this disease causes inflammation and blood clotting. Why not treat that?! Why just send people home and say, "Come back when you're on your death bed."?

The medicines they are trying to prevent them from using have been safely used for years, one even winning the Nobel Peace Prize.

Letting people suffer needlessly or die is a crime against humanity.

13k doctors signed a document trying to get the powers that be from stopping them from treating their patients.

But it's become like, if we label them, what they say doesn't matter. Cancel them. Never mind they have seen tons of patients.

Was Galileo wrong for saying the earth is not the center of the universe? Boom, you're a quack! That is not science.

There is enough evidence after all this time to see that these medications when given early have worked.

They are attacking these doctors, not the issue.

Please let these doctors do their jobs!

Sincerely,

Clara Torrison

Subject: Medical Board investigating COVID-19 misinformation from AK doctors

Dear Medical Board

Regarding the article in the Anchorage Daily News on November 13th, “Dozens of Alaska doctors are asking the State Medical Board to investigate physicians spreading COVID-19 misinformation” I want to make a few comments.

- I attended the 2nd half of the conference and I found it to be very informative. My reasons for attending were both personal and business related. I have followed this pandemic for my company and have done a lot of research of my own and I attend the ECHO Covid webinar on Wednesday from noon to 1 pm.
- I want to state that I am not an “antivaxer” and I am fully vaccinated. I chose to be vaccinated of my own accord based on the risk associated with my personal comorbidities. More than 90% of my family (wife, adult children and some of their under age 11 children) have been fully vaccinated.
- What we have learned since the vaccines were brought to AK in the spring of 2021 has me concerned and that is why I attended the conference:
 - **Vaccines are not working as advertised:**
 - It is a fact that vaccines drastically reduce cases, hospitalizations and deaths since they were implemented, no argument there from me.
 - We were told by the CDC that once you have been vaccinated, you could begin to live life as you had pre-Covid, that is, no masking, free to attend concerts, church and restaurants without any restrictions. Since that declaration the CDC has changed their position.
 - Vaccinated people can get the virus (in AK, Vaccine Breakthrough (VB) is approximately 29% of all cases since Jan. 1, 2021 and continues to rise every month)
 - Vaccinated people can be sick enough to be hospitalized (in AK, VB is approximately 15% of all hospitalizations since Jan. 1, 2021)
 - Vaccinated people can die from COVID (in AK, VB is approximately 15% of all deaths since Jan. 1, 2021)
 - Vaccines protect the people getting the shots from serious illness but they don’t stop the Delta virus from spreading to others.
 - The Pfizer, Moderna and J&J vaccines all lose efficacy within 4 to 6 months after the last shot.
 - These companies are now recommending booster shots after 6 months

The ADN article says that “misinformation” was being presented by the speakers which is a misrepresentation of what they actually spoke about. I did not find that to be the case. I would say that the information presented was backed by multiple studies by many prominent immunologists, doctors and health professionals with each of their names listed. They showed case studies of countries that have vaccination rates higher than the USA that are having significant issues with the Delta virus and the alternative methods that were used to combat the infections. All of the studies they presented had links to the actual reports so the audience could do their own research.

The speakers all stated that if you, as an adult, wanted to take the vaccine that it was up to you and your doctor to decide. The newspaper article totally misrepresented their statements. I never heard the speakers say to "not take the vaccine" for adults. They did say that they were not in favor of vaccinating children, and I agree with them.

The Alaska legislature passed the "Right to Try" law and I believe that this pandemic has shown that our vaccines are not working. We as patients have the right to get treatment from our doctor as we see fit. These prevention and treatment options have not shown to be harmful to the AK doctor's patients and they have the track record to prove it with the success of these treatments to their patients.

To have the Medical Board revoke the licenses of these AK doctors for speaking about or practicing "out of the mainstream" treatments without any other reason that you don't agree with them is outrageous. These doctors do not have a record of harming or hurting their patients in any way, so I don't know what the issue is here?

I urge you to not revoke the licenses of these AK doctors.

Sincerely,

Michael Ruiz

Subject: Considering punishing or revoking Dr. Far's medical license

To the Alaska Medical Board:

I heard the board is meeting this week re: Dr. Ilona Farr. I am not a patient of hers, but I respect her greatly for her intelligence and courage to prescribe Ivermectin to her patients.

A friend and I were lucky to have heard of Ivermectin early on -- an M.D. prescribed it so we both had it on hand to take if/when we got sick. This saved my friends' life when he feared covid would cause his death .. and it save me from a longer period of illness because I took it as a prophylactic.

If this board takes action against Alaskan doctors who advocate early treatment, more people will suffer and die unnecessarily. Harm is being done through suppressing information and access to the pharmaceuticals that have been re-purposed by M.D.'s across America who've found wonderful success in early treatment of Ivermectin, Vit D3, Vit C, Zinc, etc.

Subject:

November 15, 2021

To the Members of the Alaska Medical Board:

I am writing to you as a very concerned Alaskan Citizen in support of Dr. Nolte and Dr Farr and any other doctor in Alaska who has prescribed hydroxychloroquine and ivermectin for treatment of Covid. Where is the proof that any of their patients have died because of their prescribing these treatments? And if you look beyond Alaska and see in other states where Doctors have prescribed these treatments the results are overwhelmingly successful.

Yet those in the medical field that have an agenda to push vaccines, that are actually untested experimental drugs, give ambiguous statements of the harm these Doctors are promoting with "misinformation". The actual truth proves otherwise. I submit to you an article I found on the America's Frontline Doctors website entitled: "Answering doctor who recommends COVID-19 vaccine to his staff" posted by Caryn Lipson on September 20, 2021. You can read its entirety at:

[https://urldefense.com/v3/https://americasfrontlinedoctors.org/2/frontlinenews/answering-doctor-who-recommends-covid-19-vaccine-to-his-staff/!!J2_8gdp6gZQ!8CrSg!6s!5T3gXpUWCbpNbLRF-7ZCB_T1zFBefSR0uRz705ywWKzFHtM6Nihej7YPy-\\$](https://urldefense.com/v3/https://americasfrontlinedoctors.org/2/frontlinenews/answering-doctor-who-recommends-covid-19-vaccine-to-his-staff/!!J2_8gdp6gZQ!8CrSg!6s!5T3gXpUWCbpNbLRF-7ZCB_T1zFBefSR0uRz705ywWKzFHtM6Nihej7YPy-$)

I will quote one section of facts here from the article: (The highlighting is by me).

"The facts:

"Even as early as March 2020, there were medications to prevent and treat Covid-19. The NIH discovered that hydroxychloroquine (HCQ) was effective against SARS (a coronavirus very similar to Covid-19) in 2005.[3] In March 2020, Prof. Didier Raoult, in France, was already using hydroxychloroquine to successfully treat Covid patients.[4],[5],[6]

"HCQ was being used successfully by doctors in many countries as a late March 2020, survey of doctors in 30 countries shows.[7] At the same time, America's Front Line Doctors,[8] and others[9],[10] began speaking out about what they were seeing and how they were treating patients. One doctor even found that ventilation, though widely used, was the wrong approach and was killing patients instead of saving them.[11]

"There was no reason for patients to die of Covid-19, even in March 2020, since there were successful treatments available. Today, there are more prophylaxis and treatment protocols that doctors are using to successfully preserve or recover their patients' health and keep them out of the hospital.[12]

"Encouraging, as well, are the CDC survival rates for Covid-19 patients. Survival rates by age range in the US as of September 30, 2020, were as follows: Ages 0-19: 99.997%, Ages 20-49: 99.98%, Ages 50-69: 99.5%, Ages 70+: 94.6%. The low fatality rates and successful treatment protocols mean that there should be no need for anyone to worry about dying from the coronavirus."

I know personally of a family of three here in Alaska that were diagnosed with Covid and took ivermectin and had successful recovery. Their biggest problem was that even though their doctor prescribed ivermectin, no pharmacy in Alaska would fill the prescription. They had to order it from an out of state pharmacy. This prolonged their healing, but once they received the medication they were quickly healed.

The bottom line is it would be a great injustice to revoke these Doctors' medical licenses for consciously prescribing what they knew would be the best remedy for their patients. You do not hear any of their patients protesting. You might want to consider the motives behind those who are protesting and asking for these Doctors' licenses.

I will leave you with one final thought, a quote from Benjamin Rush:

"Unless we put medical freedom into the Constitution, the time will come when medicine will organize into an undercover dictatorship to restrict the art of healing to one class of Men and deny equal

privileges to others; the Constitution of this republic should make special privilege for medical freedom as well as religious freedom.”

Please consider wisely the repercussions of your decision. The lives of many Alaskans will be on your hands should you deny them the right to Doctors that offer a different, but successful alternative to the treatment of Covid. After all, the adverse effects of these alternatives has proven to be far less than the adverse effects of these shots.

Sincerely
Sue Mann

Subject: Alternative Treatment for Covid

I Am sending this email in support of the few doctors that have found alternative treatments in dealing with Covid. They have had large success and have rarely lost any patients. The use of Ivermectin And Hydroxychloriquine is shunned by big pharma and the protocols set up at our hospitals. The hospitals get paid \$38,000. To have patients put on ventilators from the government .
Dr ilona Farr is facing the loss of her license because she puts her patients first and found huge success in treating with alternative treatment.

Please allow the residents of the state of Alaska the Medical Choice of alternative treatments

Sincerely

Candida Szabo

Subject: In support of Global Covid Alliance Dr.'s

Dear members of the Medical Board of AK,

I am pleading with you to use great caution and listen to your hearts now. You live in a country who fought for (and won) the freedom of speech and freedom of choice. I am tremendously grateful for the

local Dr.'s who took a stand in honor of these two liberties on Oct. 30th. They chose to host an event in Anchorage in an effort to raise awareness about scientifically backed data that contradicts the mainstream narrative on Covid-19 vaccines. That's all they did. They have committed no crime, unless freedom of speech has suddenly become one, and if that is the case, we are all in great danger. If we lose the capacity to hear both sides of a debate, freedom will be lost in this country. Did you personally attend or listen to their presentation? If so maybe you would begin to understand what their agenda is, which is only to inform and give people hope. Even if you don't believe them it is imperative that their right to freedom of speech is honored. I believe these Dr.'s are heroes. It takes tremendous courage to stand up and speak out against the establishment. Thank heaven a few brave souls do so from time to time in our world. I stand for the Global Covid Alliance/ Summit and for all the Dr.'s who chose to host them here in Alaska. Please stand with us as a Medical Board in honor of the freedoms that countless brave souls have fought and died for throughout our history as a nation. Please become part of the solution. Love, compassion, and open-hearted curiosity is the way. Lay down your judgements, lay down your fears and come back to love.

Warm Regards,

Kate Henry

Subject: Medical Freedom for Doctors

To whom it may concern:

I am extremely opposed to taking away medical licenses from providers who are willing to treat with ivermectin, hydroxychloroquine, or any other medication as off label use for COVID-19.

Since providers have pledged to care for their patients and taking the Hippocratic oath to do so. They should have the ability to generate a individualized treatment plan without any conflict specific to the patient's needs. We need to allow providers to treat patients with covid. The treatment really does work! I have seen first hand that it prevents people from being hospitalized and/or dying. If your family member or yourself were sick with Covid, would you not try everything to help them overcome this sickness?

I feel that limiting doctors authority to treat covid and take their license away for trying to help sick people is ethically wrong. Medications like ivermectin are used worldwide to treat covid. You can see in India, it was used and works! Now some countries are putting medical kits with these medications in them to treat Covid-19. Over a 100 members of Congress were treated with ivermectin for Covid-19. Look all this up!! Furthermore, the NIH has listed these controversial medications as treatments for Covid on their website. <https://www.covid19treatmentguidelines.nih.gov/tables/table-2e/>

Why would they do this if it didn't work? Yet remdesivir is ok to use in the hospitals for treatment and these other drugs are not. And isn't it also being used for off label use? Wasn't remdesivir formally used as a chemotherapeutic drug?

We should be allowing these drugs to be used like Nebraska has authorized. The Nebraska attorney general said, "physicians should be allowed to use off label ivermectin and hydroxychloriquine for Covid-19." (See link below)

https://ago.nebraska.gov/sites/ago.nebraska.gov/files/docs/opinions/21-017_0.pdf

Let's work together to help fight COVID-19 by treating patients early, thus keeping them out of the hospitals, and preventing ventilation and death. We should not be fighting almost each other but coming up with a plan to change Alaska's trajectory.

Sincerely,

MaLai Smith, RN

To: Board, Medical (CED sponsored) <medicalboard@alaska.gov>

Subject: Early Treatment of Covid-19 and revocation of Alaskan doctors' licenses

Dear Medical Board,

I am writing the board to ask you to consider early outpatient intervention of Covid-19 infection to include vitamin supplementation for optimization of the immune system, monoclonal antibody treatment and repurposed FDA approved medications. I encourage you to allow Alaskan doctors the right to prescribe medications which are safe and have been shown to be effective in decreasing the risk of serious life-threatening outcomes related to Covid-19 infection. Please also be mindful that the Alaska Legislature passed legislation which gave Alaskans the "Right to Try". This was not exclusive to cancer patients, but includes any medical treatments your doctor prescribes. This medical board is not above the law.

I understand much value on treatment guidelines is defined as "best practices", and those best practices guidelines put forth by the CDC. Unfortunately, the CDC has failed to provide protocols for early outpatient treatment of Covid-19 and has lost substantial credibility by making frequent contradicting changes in their policies. It is my opinion, that especially during a pandemic, "best practices" should be based on evidence from various sources, and not limited to narrow sources that have shown to fail many patients and hospitals.

Also, it has come to my attention that your scheduled meeting will explore the possibility of revoking the Alaskan doctors' licenses who practice the above mentioned early treatment of Covid-19. I request that this possibility be put to an end. These doctors in question are ethical, caring, and capable physicians. Dr. Farr and Drs. Nolte's treatment and survival rate of Covid-19 far surpasses that of any Alaskan hospital. Dr. Farr is our personal physician, and I feel she is extremely competent, and there is no basis to revoke her license to practice medicine. Furthermore, the relationship between a patient and physician is sacred and the medical board has no jurisdiction over this relationship.

In general, my observation is that the medical community has not demonstrated a desire to follow the science, but has behaved in a manner to strong arm all physicians to march to the drum beat of large pharmaceutical companies, and force everyone to get a MRNA vaccine. I encourage you to step outside of politics and respect that the science and evidence exists to support the use of Ivermectin and hydroxychloroquine. These drugs have been administered millions of times with no adverse side effects when used in proper doses. You may refer to the WHO website to view their guidelines, if you choose to follow the science.

In summary, it is my opinion that Alaskans everywhere desire to have the option of early treatment of Covid-19, which includes Ivermectin and hydroxychloroquine. Please understand Alaskans will fight unremittingly to protect our doctors' right to practice medicine in a manner that is consistent with the "Right To Try" law.

Thank you in advance for considering my letter,
Kim Kennedy
Anchorage resident

Subject: Support early treatment of COVID

Dear Medical Board:

When you design an airline, a building, a city a road, etc.- you have lots of people get together and brain storm this idea and make drawings and modify the drawing until you come to a solution. WHY is treating COVID done differently? Why has there not been a debate pro and cons on people who think this is the way to treat a covid patient. There needs to be a debate and stop hiding behind the wizard of oz curtain on the pro Fauci way (theory way) vs. the doctor who is in the trenches and physically researching ways and testing them out on patients when the theory doctor's way is NOT working. Would you want someone to put a boiler system in your house who only read the directions vs. a plumber who has put in boilers for the last 10 years. The boiler reader is the Fauci way. The 10-year plumber is the down in the trench way. Covid is a brand-new disease. Because it is brand new, there is no way unless someone has been hypnosis or bribe to say, you can only treat a patient this way, who has NO track record (theory only) to actually save a person's life vs. another doctor who has IMAGINATION and

COMMON HORSE SENSE to try different approaches to see what works when what others are doing has not been working. Doing the same thing that is not working is Insanity and the person must be under a Satanic spell. How incredibly stupid can people be to do the same procedure that does not work- does not help the patient and does not save a person's life. What it comes down to- who is actually saving a person's life- book knowledge vs. someone who is in the trenches and is saving lives. Yes you get suspicious when a theory-oriented doctor cannot heal a patient but an open-minded imaginative doctor can and this common horse sense healing doctor is following the Hippocratic Oath. You should be ashamed of yourself. You need to write on notebook paper 50 times- I will not be a jerk- like what the teacher made students do in elementary school (When i was growing up- if you talked - this is what the teacher made you do). Hold your horses. It will take more than 3 days to figure out a treatment that works. Give it time. This is a brand-new disease. The doctor in the trenches is doing the dirty work for you and figuring out how to save lives vs. the theory orientated killing doctor. This lunacy of hunting healing doctors has got stop. Where is it listed in the fish and game manual the month and days for hunting doctors. Did I skip over that section. You need to leave the church of Fauci and start following the Hippocratic Oath. Yes I support early treatment of COVID. Anyone who does not support early treatment, follows the Holocaust plain and simple. That is a no brainer. You do not even have to be a brain surgeon to know the answer to that question. I did not take the class in logic and ethics, but what I wrote should be decent enough to understand the different between good vs. evil. Right vs wrong. Theory vs. down in the trenches.

Sincerely,

Ruth Horneck

Dear Medical Board,

I am writing to ask you to uphold the doctor/patient relationship here in Alaska.

Medical science rejects the thought that there is "one treatment" for any illness. It is our privilege to explore numerous medical options at our disposal, which is part of what makes America a leader in the medical industry.

Please do not harness this American freedom with finite rules of engagement regarding early treatment of COVID-19.

Thank you for your consideration,
Jessica Flournoy

Subject: reviewing complaints about early treatment

Attn: Alaska State Medical Board

I am disturbed to read that 100 Alaska doctors are requesting you to "investigate" doctors who advocate early treatment and ivermectin for covid illness. I am beyond exasperated with this issue.

Will you also investigate those who are suggesting this idea?

We know that "covid" is a global criminal racketeering scheme. We know that doctors and politicians are being paid and bribed to support this garbage. We know there are over 4000 patents on corona viruses

and the plan for a global coronavirus vaccine goes back to the 1990s. All of the patent information is available for anyone to see. We know that Daszak and Fauci have committed fraud. We know that it is a crime to lie to Congress.

We know that any story that is built on a lie, is also a LIE.

We are watching you, to see what side of the scam you are on. Are you also being bribed to play along? We will see.

This is perhaps the biggest crime of all humanity, and it is beyond time for it to stop.

Support the doctors that are actually trying to help people. The rest belong in jail .

Please take the time to read the attached document, The Fauci Covid-19 Dossier

Thank you,

Jennifer Titus

Ivermectin for Prevention and Treatment of COVID-19 Infection: A Systematic Review, Meta-analysis, and Trial Sequential Analysis to Inform Clinical Guidelines

Andrew Bryant, MSc,^{1,*} Theresa A. Lawrie, MBBCh, PhD,² Therese Dowswell, PhD,² Edmund J. Fordham, PhD,² Scott Mitchell, MBChB, MRCS,³ Sarah R. Hill, PhD,¹ and Tony C. Tham, MD, FRCP⁴

This article has been [cited by](#) other articles in PMC.

Background:

Go to: ☺

Repurposed medicines may have a role against the SARS-CoV-2 virus. The antiparasitic ivermectin, with antiviral and anti-inflammatory properties, has now been tested in numerous clinical trials.

Areas of uncertainty:

We assessed the efficacy of ivermectin treatment in reducing mortality, in secondary outcomes, and in chemoprophylaxis, among people with, or at high risk of, COVID-19 infection.

Data sources:

We searched bibliographic databases up to April 25, 2021. Two review authors sifted for studies, extracted data, and assessed risk of bias. Meta-analyses were conducted and certainty of the evidence was assessed using the GRADE approach and additionally in trial sequential analyses for mortality. Twenty-four randomized controlled trials involving 3406 participants met review inclusion.

Therapeutic Advances:

Meta-analysis of 15 trials found that ivermectin reduced risk of death compared with no ivermectin (average risk ratio 0.38, 95% confidence interval 0.19–0.73; $n = 2438$; $I^2 = 49\%$; moderate-certainty evidence). This result was confirmed in a trial sequential analysis using the same DerSimonian-Laird method that underpinned the unadjusted analysis. This was also robust against a trial sequential analysis using the Biggerstaff-Tweedie method. Low-certainty evidence found that ivermectin prophylaxis reduced COVID-19 infection by an average 86% (95% confidence interval 79%–91%). Secondary outcomes provided less certain evidence. Low-certainty evidence suggested that there may be no benefit with ivermectin for “need for mechanical ventilation,” whereas effect estimates for “improvement” and “deterioration” clearly favored ivermectin use. Severe adverse events were rare among treatment trials and evidence of no difference was assessed as low certainty. Evidence on other secondary outcomes was very low certainty.

Conclusions:

Moderate-certainty evidence finds that large reductions in COVID-19 deaths are possible using ivermectin. Using ivermectin early in the clinical course may reduce numbers progressing to severe disease. The apparent safety and low cost suggest that ivermectin is likely to have a significant impact on the SARS-CoV-2 pandemic globally.

Subject: Medical Board Meeting regarding Doctors providing early intervention for Covid

I would like to express my opinion regarding the meeting to address complaints about Doctors treating and providing information about Covid early intervention.

Why on earth would any medical professional complain about other Doctors helping people and offering alternatives?

People are dying with standard of care treatments. Why won't the hospitals allow other options?

I personally know people who have died with standard of care. I know others who have survived by being treated with Ivermectin and early intervention.

I also don't understand why pharmacists are refusing to fill prescriptions for Ivermectin.

I believe the Doctors who complained about this, and the pharmacists and hospitals withholding Ivermectin, need to be held criminally liable.

And by the way, I have family members in other states who have been to take Ivermectin without side effects.

Please do not take action against Doctors who truly care about helping people. They should be celebrated!

Sincerely,

Laura Touya

Subject: COVID -19 - Letter from a patient of Dr Ilona Farr

Dear Alaska Medical Board,

My name is Deanna Park. I am a recent resident to Anchorage Alaska, and a new patient of Dr. Farr. I am not new to being sick unfortunately as I am immune suppressed - I have Lupus and Sjogrens disease.

As recent as Oct 31, 2021 I was diagnosed with COVID. I am writing to pledge my full support of Dr. Farr and her medical treatments and specifically her use of the ivermectin and hydroxychloroquine treatments. I was tested on the Oct 31, 2021 with symptoms ranging from fever, difficulty breathing, chills, headaches, body aches, dizziness, extreme tiredness. And after a long discussion via FaceTime with Dr. Farr about my illness and treatment options, I went on the ivermectin/hydroxy protocols. The very next day after taking all her prescribed medications, I felt so much better! I could finally sit up and

eat a small meal of soup and that was a big deal for me at the time! I know it was only because of her treatment of me that I felt so much better. And I continue to feel better every day.

I was in a very bad place before her medications and her fast action to get my prescriptions and get me on meds I know saved me from going to the hospital or maybe even a worse predicament.

I have managed my health issue since I was 15 years old as I've always been a advocate for my health and my own well being. As I said I have Lupus and Sjogrens, both auto-immune diseases. And I know, being a patient of Dr. Farr has been the biggest blessing because of her decisions as my doctor. The ivermectin and hydroxychloroquine together changed my whole world and allowed me to recover instead of suffer from COVID.

Please feel free to contact me if you have any questions or would like to discuss this matter further. I would be happy to discuss how I am doing and what a miracle Dr. Farr's treatment as been for me.

I hope you will consider my first hand experience, with Dr. Farr and the medications she prescribed. I am now a survivor of COVID and I know it's because of Dr. Ilona Farr.

My best,
Deanna Park

Subject: in support of medical liberty for Alaska

To the Medical Board of Alaska,

It has come to my attention that complaints have been issued against Dr. Farr and Dr. Nolte , perhaps others, in a despicable attempt to punish them for putting the treatment of their patients before political concerns.

Their well-documented early treatment using vitamin therapy and Ivermectin and/or Chloroquine drugs has been extremely successful in saving lives, and preventing hospitalizations.

Isn't this the whole point of the medical profession? Surely you will not put political agendas and financial compensations ahead of the lives of the men, women, and children of Alaska.

I also hope you will not only firmly support Drs. Farr and Nolte, but also lift the restrictions on Alaskan pharmacies for filling prescriptions for Ivermectin and Chloroquine drugs.

Please give great thought to this ruling. The Medical Board of Alaska can lead the way in opening up early treatment and successful suppression of Covid 19 in Alaska .

Thank you for your attention,

Leize P. Day

Subject: Early Covid Treatment Summit

Hello,

I am writing to express my gratitude to the brave men and women that held this summit. They have risked their livelihoods, much the same way others are being forced to, in order to explore and educate as to the other potential treatments of Covid. The CDC's main gripe with other treatments is that people are being hospitalized due to usage mistakes of alternative/early treatment options. They do not dispute their efficacy, rather they acknowledge it. So this summit was exactly what was needed so that people are not forced to acquire these early treatment methods via Internet research and black market acquisition strategies. Education is the key to keeping our community safe and healthy and that is exactly what was accomplished by the people and providers who both attended and presented at this summit.

Science is a field that thrives on questioning and communication. If science becomes an echo chamber or one size fits all application, then we are no longer adhering to the core principles of science.

I pray you don't strip these dedicated clinicians of their ability to continue their scientific pursuits and their ability to practice medicine and keep our community safe.

Thank you for your consideration,

Nick Mazzolini

Subject: Early treatment persecution

Medical Board,

It has become clear over the past two years that your dampening of available medical treatments is designed to kill Alaskans.

What other disease is treated with a protocol of "stay at home until you are so sick we have to take you to the E.R."?

None.

There can be only one explanation for this and the restrictions on drugs that may help.

Please reverse course. You are literally KILLING Alaskans.

Casey

Subject: Dozens of Alaska doctors are asking the State Medical Board to investigate physicians spreading COVID-19 misinformation

Members of the Medical Board,

Please stand against this attempt by left-leaning medical personnel to silence any dissenting voice. As fear dissipates and reason returns, the number of people who are buying into the narrative being pushed becomes smaller and smaller. In many communities in Alaska, COVID is no longer "a thing" outside of those who stand to benefit from it and the small number of those who follow based on political ideology or cowardice in the face of being ostracized from their peer group.

The medical providers who go against the agenda for the good of their patients do so courageously, knowing they could be targeted as soon as our leaders fail to stand for their independence. To disallow "misinformation" is to control the narrative in favor of those who stand to benefit from COVID. If they were given a voice and not silenced, I suspect the number of independent minded providers would greatly exceed that of those "demanding action".

Please recognize that "science" dictates looking at the number of those successfully treated. Those demanding persecution of providers who fail to toe the party line NEVER use the numbers of patients treated by the dissenting providers because they have been wildly successful. Instead they quote institutions like the CDC, which has lost all credibility in the eyes of average Americans.

Please take some affirmative stand in support of those who knowingly risk their own livelihood to do what is best for their patients in spite of threats from the leftist agenda.

Subject: Concerned patient

Hello, I am writing to the board in support of the numerous doctors in Alaska who have been involved in early treatment of Covid-19. Every one of them deserve our praise and support. They have been instrumental in treating and saving the lives of a multitude of Alaskans. In July this year, my wife Lara and I contracted Covid and became very ill. Within a few days we were so sick we could barely function. We were almost unable to get out of bed. We called the doctor who we had been seeing to get some help. The doctor, who I will not mention, did nothing to help. Instead we were told to just take Motrin and Tylenol. More than we'd ever taken at any one time, a borderline overdose amount. We were scared for our lives and about to go to the hospital when a friend of ours told us about Dr. Ilona Farr. We were seen via video call and after a few questions it was evident to Dr. Farr that we needed more than just OTC medicine. We were treated with Hydroxychloroquine, Ivermectin, and Azithromycin as well as a vitamin regiment. Within a few days, Lara and I were well on our way to full recovery and were able to resume our daily lives. Without the help of Dr. Farr and the FLCCC, we would have ended up in the hospital. There is much controversy surrounding the use of the widely known and available drugs Hydroxychloroquine and Ivermectin. Both have been proven many times over for successful treatment of Covid. Ivermectin is an award winning anti viral that has been around a long time. Hydroxychloroquine has even been supported by top government officials recently. There is a substantial amount of factual evidence all over the world supporting the effectiveness of these two medications. On the matter of the vaccines. I am not against vaccination, but it does not make logical sense to take a Covid vaccine when I have already gained natural immunity. The potential for unknown side effects and questionable efficacy make the risks outweigh the benefits. Dr. Farr did not tell me not to get vaccinated but, instead discussed with me all available options to include which vaccine she recommended if I decided for myself that that was the best course of action. It should be up to the individual to decide what medications and treatments should be taken. That can not be done when valid treatments are being withheld. Ivermectin is effective, inexpensive, and plentiful. When it is not being withheld. The medical doctors that are under scrutiny put their careers on the line in order to inform the public. Doctors do their job by providing information and recommendation, which is exactly what they have done. Why would they go to all the trouble just to spread misinformation and fear. It just would not make sense. I confidently stand with Dr. Farr and all the other doctors involved in the early treatment protocol that has helped myself, Lara, and thousands of Alaskans. Please consider what is best for the people in Alaska based on documented factual evidence. Thank you and God bless.

Subject: Public Comment for Alternative Treatment of COVID

Hello,

I live in Fairbanks. I was born and raised in Fairbanks. I am writing to offer my public testimony about my COVID experience.

I contracted COVID in August, 2021. I had a very high fever and was zapped of all energy, not being able to hold down food for about 5 days.

My friend in California overnighted me Hydroxychloroquine, which I began taking on the 6th day. She sent me 8 pills, which I took in the morning and the evening. On the 4th day, I began feeling better and was able to start eating again. I got out of bed and sat up for the first time in over 10 days! I also took, and continue to take, Quercetin and NAC, both purchased at Sunshine Health Foods, locally in Fairbanks. I am grateful to be healed and I am grateful to be healthy again.

I did not, nor will I ever, take the shot that is claiming to be a "vaccination".

People are still contracting COVID after taking the shot, and ending up in the hospital, so in my eyes, this method does not work.

I have antibodies that my body naturally created, and I am confident and comfortable with my choice to allow my body to produce the needed healing process, with a little help from the Hydroxychloroquine and Quercetin.

Ivermectin has been branded "the wonder drug" and has shown to be highly effective in other countries. I am wondering why other countries are having such great success with Ivermectin, while we are paying our hospitals to serve up deadly Remdesivir, shown to cause acute kidney failure within 5 days?

Ivermectin and Hydroxychloroquine should be considered the FIRST line of defense based on their safe track record and their high effectiveness.

Please support the right to "alternative" medication.

Hydroxychloroquine has been approved and used medicinally for 75 years!

Ivermectin has been approved and used medicinally since the late 1970's.

Studies show that Ivermectin is a highly effective medicine used throughout the world, with little to no negative side effects.

See :

1. Proceedings of the Japan Academy, Series B Physical and Biological Sciences (Feb 20, 2011)

2. Ivermectin" 25 years and still going strong (NIH, National Library of Medicine, Review in Int J Antimicrob Agents. 2008 Feb. Published Nov 26, 2007. pubmed.ncbi.nlm.nih.gov/18037274/)

3. Ivermectin 20 years on: maturation of a wonder drug (NIH, National Library of Medicine, Trends Parasitol. 2005 Nov.

Published Aug 26, 2005. pubmed.ncbi.nlm.nih.gov/16126457/)

With so much conflicting data, and so many hidden agendas, it seems prudent for the Medical Board in the State of Alaska to approve medicines shown to be effective against this world-wide COVID virus.

Please allow Doctors to be the educated professionals and allow society to choose for themselves which route they will take. Mandates only create tyranny and suspicion. Stop trying to control the citizens of this great State and allow the people to be independent and responsible for their own lives. Our lives belong to us, not to you. If we make a mistake, it is on our hands, not yours. Less Government control is needed, not more.

I make my plea and state my case in gratitude for your service and for your willingness to listen and consider your position as a public servant.

Sincerely,
Loa Carroll-Hubbard

Subject: Upcoming Board Meeting

It has come to my attention that your scheduled meeting will explore the possibility of revoking Alaskan doctors' licenses who practice early treatment of COVID-19. The Alaska Legislature passed legislation which gave Alaskans the "Right to Try." This was not exclusive to cancer patients, but includes any medical treatments your doctor prescribes. This medical board is not above the law. Dr. Ilona Farr has used early treatment for over 720 Alaskans suffering from COVID-19 infection with a 99.8% success rate in preventing serious outcomes. Her record is clear.

If this board takes action against Alaskan doctors who advocate early treatment, rest assured you will have a substantial outcry across Alaska and lives will be lost. The relationship between you and your doctor is sacred. The medical board has no jurisdiction over this personal choice. Why would the standard of care be dictated by a medical board instead of a medical doctor and their patient?

Alaskans everywhere desire to have the option of early treatment of COVID-19 which includes Ivermectin and Hydroxychloroquine. These drugs have been administered billions of times with no adverse side effects when used in proper doses. Ivermectin is actually on the list of most "essential medicines" on the WHO website, safe for elderly, children and nursing mothers. When there are no federal guidelines for early outpatient treatment it is obvious that the current recommendations for treatment are political and not patient-centered.

Unfortunately the CDC has failed to provide protocols for early outpatient treatment of COVID-19 and has lost substantial credibility by making frequently contradicting changes in their policies. It is my belief that especially during this COVID-19 pandemic, "best practices" should be based on evidence from various sources including institutional, worldwide and expert opinion. Furthermore under guidance from qualified healthcare professionals, use of repurposed FDA approved medications for treatment of COVID-19 should be considered.

Sincerely,

Jennifer Wilkinson

Subject: Sound medicine

To whom it may concern,

I am writing in regards to the terrible overreach taking place into the practices of our wonderful, Alaskan doctors.

Unless I am incorrect, part of the oath taken by doctors as they enter into their practice states that "I will prevent disease whenever I can, for prevention is preferable to cure." How can doctors be expected to do this when preventative medicines are being denied? How is a doctor supposed to prevent serious COVID complications when pharmacies are kept from selling vital medicine?

When I came down with covid, it was hard to find a pharmacy that would fulfill the prescriptions needed to keep me from having serious complications. Now, as I battle long covid, I had to deal with yet more red tape in order to get the Ivermectin needed to help me improve (which, by the way, it has helped me improve tremendously). Is not science always changing and improving? Are we so old fashioned as to deny a known treatment simply because it has a different, older origin? Why not see the evidence and do what works to save lives?

As a patient of Dr. Farr, a phenomenal doctor, I feel very qualified to emphasize the importance of allowing doctors to do their job without overreaching interference. She doesn't force anyone to take treatment they don't want, she merely presents options for treatment and encourages independent thinking and research when it comes to choosing the correct course. If there is no underlying, corrupt political motivation behind stopping effective treatment, why would anyone try to stop a doctor from having the tools they need to continue this good work?

I support allowing doctors to do their jobs, patients being able to make educated decisions, and authority staying in their place.

Allow prevention; allow effective treatment.

Sincerely,
Kayla Hogate

Subject: Letter submission to board by MD's trying to silence other MD's for alternate covid treatments

I am a concerned citizen writing in regards to a letter supposedly signed by several MD's in Anchorage asking this board to censure and punish any physician who dares to offer an opinion different than the mainstream medicine dictated by big pharm and the federal government.

I am not an anti-vaccine nut, and have in fact had covid before vaccines were available, and then got the shots when they did become available. However, this demand by petulant doctors asking for retribution against some of Alaska's MD's who may offer off use medications to patients who will otherwise accept no treatment is beyond belief.

As far as I know, this is America, and the constitutional amendments still apply. This includes any willing informed participant in any medical trial or medical treatment.

This board should automatically reject this insulting request by the morons stupid enough to have signed this letter, and should also publish the letter with all signatures so the population of Alaska is given a chance to avoid these idiots for medical treatment in the future.

Sincerely, Don Crane

Subject: Re: Drs. Farr & Nolte

Medical Board:

I do not support the Alaska Medical Board taking action against Dr. Farr and Drs. Nolte.

I am NOT: a medical professional, a friend of the doctors in question, a patient of the doctors, anti-vaxx, or a summit attendee. I am: a 50+ year resident of Alaska, a Covid survivor pre-VAX roll out, and concerned with encouraging the freedom of medical options.

From my layman's point of view this pandemic has created a crisis of division. The vaccine, a positive development, does not appear to be a complete answer. I am required to submit to multiple boosters, but can still become infected or pass it on. The vaccine is referred to as, "experimental" with no pharmaceutical liability. Thus, it is an incomplete solution.

The State of Alaska has supported the medical profession with the, "right to try" legislation. These doctors have honored the Hippocratic Oath by upholding the doctor patient relationship to explore all medical options.

At this point in the pandemic to take action against these doctors is based solely upon an opinion. By withholding action against these doctors does not mean that you support their approach. It means that you are encouraging the medical profession to continue to explore all options available in this battle.

Thank you for the opportunity to be heard.

Subject: Covid-19 treatment

Dear Medical Board,

I am writing to support Dr. Farr and Drs. Nolte in their attempt to keep Alaskans alive and healthy with their prescribed early treatments for Covid-19. They use FDA approved drugs and supplements that have helped patients stay out of the hospital and recover quickly from the virus. Thankfully two of my family members received this treatment with results of rapid recovery and restored health. Dr. Farr has helped hundreds of patients with this treatment.

The CDC has no guidelines for early treatment except wait until you need to be hospitalized. What other illness is treated like this?

The medications in question, ivermectin and hydroxychloroquin are used worldwide by billions with great success in treating the Covid-19 virus. Ivermectin is listed on the WHO website on the list of “essential medicines”. It is unconscionable that many pharmacies will not dispense these to Covid-19 patients and the hospitals will not administer them even when the patient’s doctor has ordered it.

These doctors are saving lives in our community! Please support their efforts to help us through this virus!

Respectfully,
Irene Miller

Subject: Written support for Covid treatments

Alaska State Medical Board,

I am writing to you in support of continuing to use and promote early treatments than have been shown both scientifically and anecdotally to significantly reduce the impact of COVID-19 on our community. The recommendation of doing nothing until a person is so sick they have to be admitted to the hospital for LIFE SAVING treatment instead of early treatment with one or several proven treatments is absurd at the least and more along the lines of negligent and harmful. These treatments, listed below with studies to back them up, are proven to be as safe and effective (possibly more so) than any of the "recommended" medications and preventatives including Remdesiver and vaccination. Restricting them is criminal behavior. Tactics of slandering these treatments as "horse medication" when we all know that ivermectin is a valid and thoroughly tested human medication in addition to having veterinary uses is nothing short of ignorant and certainly doesn't justify not using them(it is also one of the purest forms of true misinformation we have seen). The argument that non recommended treatments haven't been studied enough falls short since the recommended treatments also haven't been studied enough and don't appear to be very safe or effective in the studies we do have.

As we know Covid vaccination alone does not prevent illness, spread or even death from this disease. See study:

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8481107/>

<https://www.cnn.com/2021/07/30/cdc-study-shows-74percent-of-people-infected-in-massachusetts-covid-outbreak-were-fully-vaccinated.html>

We also know that despite no evidence of drugs like Remdesivir having any positive effects and possible negative effect they are still being used and pushed to the detriment of many, see studies:

<https://www.who.int/news-room/feature-stories/detail/who-recommends-against-the-use-of-remdesivir-in-covid-19-patients>

<https://jamanetwork.com/journals/jamanetworkopen/fullarticle/2781959>

We do have several treatments that can be used at the early stage of illness and possibly later as well, these treatments are known and proven to be safe and effective for many things and also at preventing hospitalizations and deaths from Covid-19. Ignoring their effectiveness and preventing

patients from receiving them as treatment is costing the state lives and resources. Here are some of these treatments:

Ivermectin :

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7550891/>

<https://ivmmeta.com/>

zinc:

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7395818/>

azithromycin:

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7290142/>

vitamin D:

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8339450/>

There are more treatments and more studies that firmly reinforce what I am stating to you today. I strongly recommend you act in the best interest of the residents of Alaska and all of Humanity by not closing the door to effective treatments to this pandemic or limiting Doctors in their ability to help their patients.

Thank you,

Subject: Early Treatment of Covid

To Alaska Medical Board

Recently I flew from Idaho to my home in Soldotna, AK to take care of my 80 year old mom who had covid. Thankfully she had early treatment with ivermectin and she recovered quickly. Drugs are repurposed often and it is smart to save money and lives. Ivermectin is safe and there are countless doctors, practitioners and even governments giving early treatment of this drug. They are brave and doing no harm to their patients. Doing harm is giving no treatment or waiting to treat until the patient needs remdisavir which is proven to shut down body systems one by one.

Fear is the virus, truth is the cure.

Subject: Support of COVID-19 Early Treatment

Dear Medical Board,

I have been made aware of the fact that you are attempting to take away the medical license of those medical providers who encourage and prescribe Ivermectin and hydroxychloroquine treatment for COVID-19.

Why would the standard of care be dictated by medical board instead of a medical doctor and their patient?

The relationship between a doctor and a patient is sacred and private.

When there are no federal guidelines for early outpatient treatment, it is obvious that the current recommendations for treatment are political and not patient-centered.

When used in proper doses, Ivermectin and Hydroxychloroquine have been used millions of times with no adverse side effects. Proven safe for men, women, children, the young and old, and pregnant women.

Even if you believed these drugs were of no benefit, the fact that they are safe and pose no risk to the patient, the choice should be left between a doctor and his/her patient.

As long as a doctor is upholding, honoring, and respecting the oath they took to "do no harm" they should be left to serve their patients as they see fit.

If the Alaska Medical Board proceeds with this action against medical professionals they will expose themselves to a substantial outcry across the great state of Alaska.

They will also show they think they are above the law and have no respect or concern for the Alaskans they serve.

The next question would be; who, exactly, are they serving?

I am a fourth generation Alaskan who loves her state and her people.

I am asking this state medical board to stand out and serve Alaskans, save lives, and not bow down to the "best practices" put forth by the CDC.

Practices that are literally killing people!

Thank you!

Subject: Support for Covid alternatives

To the Members of the Alaska Medical Board-

It is disheartening to see that doctors who have had good success with treatment of Covid using preventative vitamin therapy and early treatment, including the use of Ivermectin, are being attacked. Is the goal to save lives or is to protect the profits of the pharmaceutical industrial complex? If a treatment works why would it be restricted? Why wouldn't pharmacies in Alaska fill orders for

Ivermectin and the Choloquine drugs? Why would hospital staff refuse to try these early interventions? Why are patients and their families not given the right to choice?

This is wrong. Please do not take away the medical licenses of Drs. Farr and Nolte. Are the doctors calling for this jealous of their success? Shouldn't everyone work together to help patients and not squabble about methods? If something works, let them use it. This seems very mean-spirited, vindictive, irresponsible, and is definitely not looking out for the patient's welfare.

I personally use alternative medicine regularly and it has helped me more than most conventional therapies. I am glad for my Carpal Tunnel Surgery and for the help we got for my daughter's broken arm, but for my long-term conditions, herbs, vitamins, chiropractics, regular exercise, prayer- these have all been major components of my health quest. To remove proven, effective doctors and treatments to comply with the mainstream media's sensationalist narratives and partisan, political voices will result in avoidable deaths instead of protecting public health.

I urge you to vote to keep Drs. Farr and Nolte's Alaska Medical licenses in place (and any others who are working to save lives by using alternative treatments to the official pharmaceutical lobbyists' narrative). Does the medical profession care more about making ill-gotten money or actually saving lives?

Thank You.

Sincerely,

Lori Wilson-Ortega

Subject: RE: November 19, 2021 Board Meeting and Medical Tyranny /Persecution

To whom it may concern,

Thank you for the opportunity to voice my opposition of the 100 doctors that are advocating for medical tyranny by attempting to ban early COVID treatment by qualified Physicians.

These health care discussions and choices are protected and private between the care providers and their patients, period. These hero Physicians focused on early interventions are those that are focused on patient care, honoring their oath.

It is absolutely unconscionable that pharmacies are refusing to fill qualified Physicians orders for proven, life saving medications. The pharmacies and their employees withholding these medications will be held accountable when the time comes.

These early interventions are what stopped this illness in it's tracks when my husband had it last March, thankfully within 48 hours of beginning this treatment protocol he was significantly improved and nearly back to normal. We can attest to the fact this treatment protocol absolutely works and saves lives.

Do not allow this group advocating for medical tyranny to make this any more political.

Please protect the rights and freedoms of the people to make their own health care decisions with the help of the health care provider of their choice.

In addition, please release the document and list of those physicians that signed it to the public prior to your November 19th meeting.

Sincerely,
T. Wagster

Subject: Doctor Patient Relationships

To whom it may concern,

Please do not get in the middle of the doctor patient relationship. Standard of care is between the doctor and their patient. Do not block doctors from giving Early Treatment. Do not block doctors from using off label drugs. 30% of drugs today are used off label.

Look at studies yourself. There are well over 60 showing efficacy of off label drugs.

Let the docs be docs please.

Stop blocking the pharmacies from being able to prescribe.

Stop evaluating as a mass. Each situation is the unique case between doctor and patient.

Please take the time to read the studies

Subject: COVID treatment

Dear Medical Board

Alaskans everywhere desire to have the option of early treatment of COVID-19 which includes Ivermectin and Hydroxychloroquine. These drugs have been administered billions of times with no

adverse side effects when used in proper doses. Ivermectin is actually on the list of most “essential medicines” on the WHO website, safe for elderly, children and nursing mothers. When there are no federal guidelines for early outpatient treatment it is obvious that the current recommendations for treatment are political and not patient-centered.

Best regards

Andreas Schoenenberger

Subject: Public Comment for Friday, November 19th Quarterly Meeting - Please Document

Importance: High

Dear Members of the Alaska Medical Board,

I ask you to present and read this email as a documented public comment at your next quarterly meeting on Friday, November 19th. My name is Rhoda Myers. I live in the Mat-Su Valley. My professional field is in social work, where I have worked with a large variety of clients, including the elderly, individuals with disabilities, resettled refugees and victims of human trafficking, homeless families and individuals, and US Veterans. I am writing you today out of serious concerns regarding the petition crafted by MeriJeanne Moore, which urges the Alaska Medical Board to investigate several Alaskan medical doctors who attended the Early Treatment Summit for Covid.

The fact that this petition exists and has made its way to your desk does not surprise me. There will always be those who disagree with opposing viewpoints and feel it is their responsibility to somehow lead the charge against them, doing whatever necessary to silence and bury them. However, the fact that this petition would even remotely be considered as something to be seriously discussed or investigated, does indeed greatly trouble not only myself, but thousands of other Alaskans – many of them working in professional fields with the public as well. If you could hear the buzz going on right now within our communities regarding this, you would know how deeply troubled Alaskans are. When government, science, or the medical industry seeks to eliminate the relationship between a patient and their doctor, there is grave concern, and it is time for the public to take a strong stand against it.

If there are those in the medical profession who do not want to prescribe or support the use of Ivermectin, Hydroxychloroquine, vitamins, etc. for their patients – then so be it. Those patients should be free to work with those providers and come up with a plan that they feel comfortable with. No one on this “side of the fence” seeks to eliminate that right for either those patients or providers. HOWEVER, those professional medical providers who DO feel there have been substantive enough studies, reports, and patient examples to show the early treatment of covid using medications such as those just mentioned above and wish to work with their patients (who are strongly requesting prescriptions for such), SHOULD NOT be demonized by public slander, mocking, name calling, investigation, and ostracizing! Neither should those patients continue to be segregated, humiliated, and condemned. This has got to stop. YOU have the power to end this type of division right here and right now. Alaskans are trusting in each of YOU to do just that by refusing to subject these esteemed medical doctors, who have served our communities with dedication and professionalism, to investigation or punishment for simply standing up for what they believe is right, true, and ethical. Dr. MeriJeanne Moore, and those medical doctors who have signed the petition, cannot simply eradicate all those who disagree with them. This is not 1940’s Germany. America is still a free country the last I checked. Americans still have the choice to work with their medical providers in PRIVATE, without fear of retribution or public shame. This entire

issue is throwing HIPPA right out of the window. Do you all support HIPPA or not? It would be one thing if these medical providers were prescribing something illegal and poison to purposefully kill their patients. It is quite another to simply prescribe medications that are tried and true, having been used for decades with safety and success. Additionally, medications showing irrefutable improvement among patients with Covid. Medications that their patients are BEGGING for. Medications and treatments that are unfairly being withheld from the sick. Medications and treatments that, quite honestly, people are dying without.

I can tell you from personal and professional experience over the last two years, people are terrified. They are struggling with mental and emotional distress that has escalated significantly over the last 24 months. Families are being divided over these arguments and the choices that the individual members are making. They are literally petrified about what some medical doctors and hospitals are doing – how they are making huge control and power grabs, refusing patients a choice in their own healthcare. Alaskans are staying as far away from the hospitals as they can, until it is almost too late. Why? Because they hear the stories of how doctors and hospital administrators are absolutely refusing the use of Ivermectin and other early treatment options. They are terrified to go in and be just another number given Remdesivir and then thrown on a ventilator. They know the large number of peoples' outcomes with that kind of protocol. They want the choice to utilize other early treatment options. What is the harm in this? There is none. Give Alaskans a choice. We shouldn't have to ask you for that. Alaskans already have a choice... it is simply at risk of being stolen by those who cannot be satisfied with the fact that ALL people have a choice. PLEASE allow medical doctors to prescribe early treatment medications and therapies WITHOUT the fear of being stigmatized and punished! PLEASE allow Alaskans a voice and choice in their personal medical care – whether that is inside, or outside of, a hospital setting. STOP this type of medical overreach that Dr. MeriJeanne Moore is leading. It is shameful and astounding that Alaskans even need to stop what they are doing to voice their concerns about this. People are busy working and trying to stay afloat right now. The last thing they need is to be having to write or call in to defend their BASIC human rights in this country.

We ask you to not entertain this investigation at all. To do so is to publicly state that these medical doctors are doing something wrong or dirty. It is to silently show support and give accreditation to what the petitioners are asking. Stop fueling the fire of division in our state. Stop allowing this kind of slander and shaming. These medical doctors have done nothing wrong. Alaskans stand with them and will continue to do so, voicing our support and defending them at all costs. We will not stand idly by and watch this type of overreach creep into our state without a battle. Not here. Not in Alaska. Not in our communities. Not in our healthcare. Not to our amazing medical providers who have sustained and helped us when we desperately needed them. Never.

My husband is alive because we were able to do early treatment and homecare.

If you look at journal entries from other countries, you will see peer reviewed studies that show early treatment with a variety of strategies including off-label use of various drugs such as ivermectin and hydroxychloroquine in combination with other drugs have proven to decrease hospitalization and mortality.

Thank you for taking the time to review my letter.

Subject: CDC Guidelines Involving a Doctor Patient Relationship

It has come to my attention that your scheduled meeting will explore the possibility of revoking Alaskan doctors' licenses who practice early treatment of Covid-19. The Alaska Legislature passed legislation which gave Alaskans the "Right to Try". This was not exclusive to cancer patients, but includes any medical treatments your doctor prescribes. This medical treatment should be between a patient and their doctor. There is never a treatment of anything that "one fits all" and should not be considered by a suitable board member.

Subject: Support of Patient Autonomy

I am mailing as I am simply astonished there are some within the medical field who are attempting to silence those whose treatments they do not necessarily agree with.

What is happening in our society today is completely outrageous. Hospitals refusing to administer lifesaving drugs and treatments when requested by patients or ordered by their physicians especially those with COVID.

It is astounding how so many are quick to write a script for Humira, Eliquis, Latuda, Chantix, Viagra, etc. yet fail to promote a healthy lifestyle. Why not promote not smoking, eating a healthy balanced diet, regular exercise, maintaining a healthy body weight, getting enough sleep along with taking the proper vitamins and minerals.

It is unethical to attempt to punish those who are promoting early interventions and those who are successfully treating their patients especially regarding COVID. It has been proven that early treatment and prevention, are the solution to reducing hospitalization numbers and deaths. This practice needs to be accepted and encouraged and made a priority.

Vitamin D is a nutrient your body needs as it regulates many other cellular functions in your body. Its anti-inflammatory, antioxidant and neuroprotective properties support immune health, muscle function and brain cell activity.

Vitamin C is needed for the body to develop and function properly. It plays an important role in immune function.

Zinc helps your immune system and metabolism function.

Ivermectin is an FDA approved anti-parasitic agent which has been found to inhibit severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) replication in vitro and

Hydroxychloroquine and Chloroquine which are both FDA approved, are old drugs used against malaria, rheumatism, inflammation in the joints, lupus, among others. These drugs showed positive results in preliminary scientific research for treatment of the severe acute respiratory syndrome coronavirus (SARS-CoV-2).

The list of alternate supplements and treatments are vast and it is up to an individual and their health care provider to determine what is best suited for them. To believe there are health care professionals who are being professionally persecuted for their concerns and treatment of their patients simply because it may differ from the “norm” is simply wrong.

I have personally benefited and continue to benefit from alternative forms of treatments. Those who have treated and continue to treat myself and my family I firmly believe recognize their moral and ethical obligation to place our needs as patients before their own. Furthermore patient autonomy is in the forefront of their decision making and they treat myself and my family with the utmost respect and humanity. I believe those who are actively trying to villainize, professionally discredit and persecute others in their field should do the same along with treating their colleagues and themselves with similar respect in order to strive for wellness and be in a position to treat others. If unable then I believe their behavior is equally as unethical and harmful as to what they are claiming.

To be clear I am voicing my concern over the overreach which seems to be taking place regarding our patient autonomy. Patient autonomy, is right of patients to make decisions about their medical care without their health care provider trying to influence the decision. Patient autonomy does allow for health care providers to educate the patient but does not allow the health care provider to make the decision for the patient. We as patients get to figure out what doctor's style matches our own in order to receive the kind of care we are comfortable with. This needs to be protected. I stand with those who recognize and support our personal autonomy and believe the board should as well.

Kristina Murray

Subject: November 19th meeting

To Whom it May Concern,

Since when in America is it wrong to question or have a different opinion? I feel what is happening in our medical field is very dangerous and unethical.

If safe is the paramount concern for humanity, why are effective treatments against COVID being withheld. The current form of "approved treatment" isn't working and is extremely dangerous and unethical. Forcing people to do or take things they neither want or need is wrong.

I support Dr. Farr and her colleagues who are dedicated to helping people with early treatment options to COVID. They are saving lives with long proven medications with positive results and no side effects.

Why is the Alaska Medical Board going against their oath? Doesn't your oath say you will prevent disease whenever possible, for PREVENTION is preferable to cure.

Remember Dr. Semmelweis. Please allow our doctor's to continue their preventive and effective treatments.

Thank you,
Elaine Helling

Subject: SUPPORT of Covid prophylaxis and early treatment protocols

November 16, 2021

TO: Alaska Medical Board
FROM: Susan Snow; Anchorage resident
RE: Support of Covid Prophylaxis and Early Treatment Protocols

We find that the available data does not justify filing disciplinary actions against physicians simply because they prescribe ivermectin (or hydroxychloroquine) to prevent or treat COVID-19. – Doug Peterson, NE AG; 10/21

I urge the Alaska Medical Board to disregard the letter of complaint from the group of doctors protesting Covid prophylaxis and early treatment protocols followed by another group of doctors. This is unprofessional on the complainant's part in several ways as it seeks to: preclude the doctor/patient relationship and stifle the patient's ability to make free and personal choices. If the end result is to prevent Alaskan deaths - then the personal experiences of the prophylaxis and early treatment prescribing doctors should be impartially reviewed. Otherwise - the only conclusion that can be made is that Alaskan's deaths do not matter to the Alaska Medical Board.

The Fifth U.S. Circuit Court of Appeals has affirmed the stay on the Covid vaccine mandate citing:

The mandate is a one-size-fits-all sledgehammer that makes hardly any attempt to account for differences in workers....

The same could be said of current Covid hospital-only treatments. It is unconscionable that the best one can be told upon receiving a Covid positive diagnosis is to go home, isolate and hope to not see you at the hospital! This ignores the potential of prophylaxis and early treatments. The exception to this being the monoclonal antibody treatments which are not available to everyone.

It has always been my view that it should be a doctor's objective to keep their patients out of the hospital. Through Covid prophylaxis and early treatment protocols - family practice doctors have the potential to do this. And with this - the potential to minimize local hospital ER and ICU overcrowding due to Covid. This effort should be commended instead of vilified.

Smarter people than I have researched, evaluated, reviewed and wrote on the issue of ivermectin being used in both Covid prophylaxis and early treatments. One such person is Nebraska's Attorney General, Doug Peterson. His entire opinion (dated October 14, 2021) is attached as a .pdf but may also be found at the below website. It is 48 pages long and contains links to data referenced within: <https://ago.nebraska.gov/opinions/prescription-ivermectin-or-hydroxychloroquine-label-medicines-prevention-or-treatment-covid>

To summarize and quote him, **"We find that the available data does not justify filing disciplinary actions against physicians simply because they prescribe ivermectin (or hydroxychloroquine) to prevent or treat COVID-19."**

Thank you.

Subject: In Support For

Hello,
I am writing to the board in support of the numerous doctors in Alaska who have been involved in early treatment of Covid-19. Every one of them deserve our praise and support. They have been instrumental in treating and saving the lives of a multitude of Alaskans. In July this year, my husband Eric and I contracted Covid and became very ill. Within a few days we were so sick we could barely function. We were almost unable to get out of bed. We called the doctor who we had been seeing to get some help. The doctor, who I will not mention, did nothing to help. Instead we were told to just take Motrin and Tylenol. More than we'd ever taken at any one time, a borderline overdose amount. We were scared for our lives and about to go to the hospital when a friend of ours told us about Dr. Ilona Farr. We were seen via video call and after a few questions it was evident to Dr. Farr that we needed more than just OTC medicine. We were treated with Hydroxychloroquine, Ivermectin, and Azithromycin as well as a vitamin regiment. Within a few days, Eric and I were well on our way to full recovery and were able to resume our daily lives. Without the help of Dr. Farr and the FLCCC, we would have ended up in the hospital. There is much controversy surrounding the use of the widely known and available drugs Hydroxychloroquine and Ivermectin. Both have been proven many times over for successful treatment of Covid. Ivermectin is an award winning anti viral that has been around a long time. Hydroxychloroquine has even been supported by top government officials recently. There is a substantial amount of factual evidence all over the world supporting the effectiveness of these two medications. On the matter of the vaccines. I am not against vaccination, but it does not make logical sense to take a Covid vaccine when I have already gained natural immunity. The potential for unknown side effects and questionable efficacy make the risks outweigh the benefits. Dr. Farr did not tell me not to get vaccinated but, instead discussed with me all available options to include which vaccine she recommended if I decided for myself that that was the best course of action. It should be up to the individual to decide what medications and treatments should be taken. That can not be done when valid treatments are being withheld. Ivermectin is effective, inexpensive, and plentiful. When it is not being withheld. The medical doctors that are under scrutiny put their careers on the line in order to inform the public. Doctors do their job by providing information and recommendation, which is exactly what they have done. Why would they go to all the trouble just to spread misinformation and fear. It just would not make sense. I confidently stand with Dr. Farr and all the other doctors involved in the early treatment protocol that has helped myself, Eric, and thousands of Alaskans. Please consider what is best for the people in Alaska based on documented factual evidence. I support all the Doctors that are trying to save peoples lives by using these protocols and treatments to keep people out of the hospital and saving their lives.

Thank you and Have a Blessed Day!

Lara Shultz <><

Subject: Possible Investigation

Good Morning,

It has come to my attention that your scheduled meeting this week will explore the possibility of revoking Alaskan doctors' licenses who practice early treatment of COVID-19. As I understand, The Alaska Legislature passed legislation some time ago which gave Alaskans the "Right to Try." This was not exclusive to cancer patients, but includes any medical treatments your doctor prescribes...including COVID-19.

Secondly, with regard to treatment of COVID-19 It has come to my attention that "best practices" is defined as the guidelines put forth by one institution, the CDC. Unfortunately the CDC has failed to provide protocols for early outpatient treatment of COVID-19 and has lost substantial credibility by making frequently contradicting changes in their policies. It is my belief that especially during this COVID-19 pandemic, "best practices" should be based on evidence from various sources including institutional, worldwide and expert opinion. Furthermore under guidance from qualified healthcare professionals, use of repurposed FDA approved medications for treatment of COVID-19 should be considered.

I cannot accept the possibility of punitive action against the physicians in question. What action did they actually take that directly caused injury or harm to any of their past patients? At what point did any of them commit action worthy of an investigation by the board?

I ask that you take these perspectives into consideration as you evaluate your next steps regarding this matter.

V/R,
Chris Widener

Subject: Doctor /Patient rights

To Whom It May Concern,

Any and all medical decisions are made between a provider and their patient. Patients choose alternative therapies all the time for everything from UTI's to various cancers to virus care. This is a free country, we have autonomy, our doctors have autonomy. Threatening medical provider licenses for educating themselves and others about varying interventions at varying intervals of this virus is wrong. How have medicine and science grown except for through trial and error? Why are there so many "off label" uses for prescription drugs except for trial and error? Many drugs state "mechanism if action is unknown", yet the target outcome is reached. The future of medicine is becoming scary, the people have a right to believe in and trust the medical industry. Use common sense and give these providers the autonomy and respect that they deserve.

Respectfully,

Matthew Armstrong

Subject: Revoking Medical Licenses Meeting

Dear Medical Board,

The current "best practice" is to send COVID-19 positive Alaskans home until their condition deteriorates to the extend that they must be admitted into the hospital.

During this time they are told to seek treatment from their physician.

It has come to my attention that Dr. Ilona Farr has used early treatment for over 720 Alaskans suffering from COVID-19 infection with a 99.8% success rate in preventing serious outcomes.

This is an amazing high rate of success!

Her record is excellent and not achieved by any other doctor in Alaska.

She is a true HERO for the hundreds of lives she saved!

I personally met Dr. Ilona Farr when I attended one of the CME she offered.
I was very impressed with her knowledge, compassion and empathy.
She is a true professional, a pride for the profession and a fortune for patients that have her as a physician.

I have learned that your scheduled meeting will explore the possibility of revoking Alaskan doctors' licenses who practice early treatment of COVID-19, including Dr Ilona Farr.
This reminds me of the KGB actions against those that are successful!

Instead to invite her and the other doctors that have been very successful with COVID early treatment to teach all the other doctors in family medicine how they treated their COVID patients, YOU chose to punish them?
Where is your understanding, your compassion and empathy for the people that died because they didn't have access to these doctors early treatment plan?

Is the medical board an instrument to punish those that save lives?

Is the medical board job to attack and intimidate successful doctors that save patients' lives with COVID early treatment?

Is the medical board job to put more people in hospitals, cause more deaths by revoking successful doctors' licenses?

The Alaska Legislature passed legislation which gave Alaskans the "Right to Try."

This was not exclusive to cancer patients, but includes any medical treatments your doctor prescribes.

The relationship between a patient and his/her doctor is sacred.

The medical board has no jurisdiction over patients personal choice.

The medical board is not qualified, can not dictate the "standard of care" for any patient. The patient has the liberty to choose the option that is best for him/her.

People in the Medical Board are appointed to do good not to cause harm and death by depriving patients access to early treatment from the doctors they trust.

If this board takes action against Alaskan doctors who advocate early treatment, rest assured you will have a substantial outcry across Alaska and lives will be lost.

You will be responsible for the death of innocent people that you deprived from access to early treatment.

This medical board is not above the law.

If this medical board is comprised of people that do not have understanding and appreciation for human life, then maybe is time for changes.

I hope you will see clearly this issue and take immediate and appropriate actions.

By doing so you will prevent the loss of precious lives of those people that now don't have access to early treatment because of your actions.

Apologize to Dr Ilona Farr and the other true doctors that saved lives with COVID early treatment.

Invite Dr. Farr and the other doctors that successfully used Covid early treatment to lecture on this subject so more doctors could be educated and learn from their excellent knowledge and medical experience.

Thank you for your time and consideration to this life and death matter.

Subject: Support for doctors trying to save covid patients

I am supporting the doctors and scientists that spoke at the October 30 event at Change Point Church. These people are trying to help people during this pandemic and it appears they are doing a good job of saving lives. It does not appear that the doctors complaining have the best interest of their patients in mind.

When there are alternatives available, why shouldn't the doctors and their patients have the right to make decisions for themselves, not be prevented from using treatments that have been proven effective and saved people from having to go into a hospital and be denied the treatment they and their doctors have asked for?

It's time for people to be able to be responsible for their decisions and keep administrators and politicians out of it.

Subject: Hospital Visitation Rights

My father, long-time Alaska resident Dan O'Barr Sr., is currently in extended care at St. Elias, part of the Providence family of hospitals, in Anchorage. Providence has instituted a blanket "no visitor" policy, which forbids my mother (and his wife of 57 years) from being at his bedside in this time of need. The medical professionals caring for him are unable to articulate any medically-necessary reason to bar visitation in this case. Indeed, there is no medical professional we can speak to with authority to decide, the nurses and doctors indicate this is a "business" decision. We appreciate all that these caring professionals are doing, but their hands are tied with regard to providing care. My father is mostly incapacitated at the moment, and this rule prevents him from having an advocate at his side. It is extremely taxing on my mother's emotional health. The lack of compassion, common sense, and basic human dignity displayed by Providence management is appalling. This would never be tolerated here in my current home of Ohio--is Alaska some backwoods place that isn't capable of offering the same standard of care found in the rest of the country? People are not machines, and it is inhumane to deny access to family caregivers, especially when someone is not fully capable of advocating for themselves. What good does it do to try to save his body, if you destroy his mind and my mother's emotions? I implore the board to pressure Providence and any other provider in your jurisdiction to do the right thing by their patients. Perhaps they need to be reminded "...that there is art to medicine as well as science, and that warmth, sympathy, and understanding may outweigh the surgeon's knife or the chemist's drug." If this doesn't resonate with Providence administration, then why would the board tolerate the company continuing to practice medicine in the state? It should not take a new law to force hospital administrators to behave ethically and follow with their [own mission statement](#), but I am happy to advocate for one if that's what it takes!

Sincerely,
Dan O'Barr Jr.

Subject: Your meeting about Early Medical Treatment

>

> Greetings Medical Board,

>

> It is reported that your public meeting on Friday, 11/19 2021 will evaluate if certain licensed Alaskan doctors may practice early treatment of Covid-19.

>

> Dr. Ilona Farr is one of many good doctors in our community who are integrating safe, effective, preventive medicine into their practices. She is well educated in experience, medical training, and scientific research and analysis. Dr. Farr has legal and ethical rights to prescribe early treatment for Covid-19.

>

> Why is she being questioned when no clear Federal guidelines for early outpatient treatment have been published?

>

> The CDC has failed to provide effective protocols for early outpatient treatment of COVID-19, while millions of American citizens suffer in fear, confusion, mental and physical anguish, and illness.

>

> Around 20 years ago the Alaska legislature passed legislation which lawfully gave Alaskans the right to try. This includes any medical treatments your trusted doctor prescribes.

>

> Please prevent this issue from becoming an ugly fight about medical freedom & right to choose verses a medical establishment refusing to accept and utilize safe scientifically researched and published early treatment protocols.

> I urge you to use your greatest wisdom to avoid a fight by promoting understanding and acceptance of others. Are you willing to suggest to our medical community that they apply their intelligence and compassion to unify, then together, create an Alaska Early Treatment Plan that serves well for all Alaskans?

>

> Respectfully,

> Pat Hayes

Subject: COVID treatment!

Good afternoon!

Alaska Medical Board,

My name is Veronica an Alaskan since 1985, married and a mother raising our six children in this beautiful frontier in Bird Creek 20 minutes South of Anchorage.

My family has survived Covid and Delta with this early onset of treatment protocol Vitamins C, D3, Zinc & HCQ. We're thankful we did not need the hospitalist's care. We've been following America's Frontline Doctors from the beginning of this nightmare of a journey we all find ourselves in. Our nightmare

started the day Hospitalist's denied Family/ Friends being present to advocate as supporters of their loved ones NEEDED as essential advocates when entering a healthcare system.

Our family supports all the medical HEROES Clinic Practitioners who have come out to speak and treat us with early onset of treatment for symptoms of this horrible disease, because they have a successful treatment plan and it works.

We have two friends who have needed extra help from the hospitalist's and they had started this early onset of treatment plan at home with their Primary Healthcare. When being admitted to the Hospitalist's they were both denied this treatment plan and they sadly passed on to life eternal.

The Hospitalist's treatment plan is to take a Tylenol and if that doesn't work we'll treat you with Remdesivir (a kidney killer) and hook you up to a ventilator. (90%+ don't survive after ventilator is used). My assessment is these numbers are not a successful treatment option.

My hope for giving testimony to you today is to help advocate to the hospitalist's healthcare professionals to be amendable and work with treatments that have a history of successful treatment for decades. To start implementing this treatment protocol immediately. We need to be a Unified frontline for fighting this nightmare disease. We can ALL agree that we want the most people to survive , thrive and have a longer healthy life.

Respectfully,

Veronica Lambertsen

November 16, 2021

Dear Medical Board

It has come to my attention that your scheduled meeting will explore the possibility of revoking Alaskan doctors' licenses who practice early treatment of COVID-19. I understand that one of the subject doctors is my doctor, John Nolte. I also understand that the Alaska Legislature passed legislation which gave Alaskans the "Right to Try." This was not exclusive to cancer patients, but includes any medical treatments your doctor prescribes. In my opinion, your censure of, or any action taken against John Nolte for his methods of early treatment of COVID-19 would probably be illegal,

certainly unethical, and to me unconscionable. Please consider your actions carefully in this matter.

Regards,

William de Schweinitz

Subject: Public hearing 11.19.21; Dr.Farr/Dr. Nolte

Thank you for your time.

I implore you to not take away the medical licenses of those who are practicing medicine against the mainstream propaganda of Big Pharma. It is illogical to shun the doctors who are having success treating Alaskans with SARS-CoV-2 albeit in a different manner than some see fit.

As Alaskans, and Americans, we have a constitutional right to freedom including choosing which doctor we trust in the practice of medicine. It is our right to be informed of the risks and benefits of such treatments and practices which then we ourselves can make informed decisions. Remove our choice and We The People will pipe up and demand better of those of you who sit high on the throne. This country is a Republic of the People and we will be heard.

DO NOT REMOVE DR. FARR OR DR. NOLTE.

Good day to you,

Melissa West

Subject: comment letter for dr. Farr and Dr. Nolte

please add this letter to the defense of dr. farr and dr. Nolte

November 15, 2021

Dear Alaska State Medical Board Members,

I am writing this letter in support of Dr's Farr and Noltes.

First, I would like to thank each of you for lending your years of education and sacrifice to serve our great state in such an important way, serving on the Alaska State Medical Board. You are critical to the practice of good medical ethics and excellent care in our state.

It seems to me, that one of the ways to validate the current medical literature is done best in a free and open society. That seems to be accomplished best when my Dr. is allowed individual medical discretion to read clinical, and other international data, then decide the best treatment aligned with the patients wishes. I sincerely believe that if Dr. Farr and Dr.'s Nolte were to be reprimanded for following their convictions, after carefully and extensively reviewing all the data, (especially important in an emerging and evolving pandemic) and taking the patient's desires into consideration, this action would lead to other excellent Doctors being uneasy, or even fearful, to follow their convictions and compromise their independence of making good judgements when independence is needed, especially in rural Alaska. I am also concerned that upcoming medical students, or even young Alaskans, may be discouraged from entering family practice medicine. The Dr's in question, once licensed, have all maintained an excellent rapport with the public at large and unwavering support within our community.

Finally, if you take action to remove Dr. Farr's license, or to censure her, for prescribing safe medication with low side effects and that did not harm any patients, as far as the reporting has stated, then you will effectively cause direct harm to me as one of Dr. Farr's current patients. She has and is currently helping oversee my rehab recovery, from a massive stroke, and I could not be more grateful for her help and medical expertise on this journey. Please consider and honor Dr. Farr's and Dr.'s Nolte many years of excellent practice, their current experience with Covid patients and the outcomes, and the many potentially effected current patients who love their Provider.

Thank you for your time taken to read and consider this letter.

Subject: Early Treatment of COVID-19

DEAR MEDICAL BOARD,

It has come to my attention that your scheduled meeting will explore the possibility of revoking Alaskan doctors' licenses who practice early treatment of COVID-19, including Dr. Ilona Farr, who has used early treatment for over 720 Alaskans suffering from COVID-19, with a 99.8% success rate in preventing serious outcomes. Ivermectin and Hydroxychloroquine are two examples of drugs administered countless times with no adverse side effects when used in proper doses. Ivermectin is on the WHO's website as an "essential medicine", safe for elderly, children and nursing mothers.

When there are no federal guidelines for early outpatient treatment it is obvious that the current recommendations for treatment are political and not patient-centered, as are the recommendations for censure of physicians who use time-honored medications used world-wide to help cure their patients. Keep politics out of medicine!

The Alaska Legislature passed legislation which gave Alaskans the "Right to Try." This was not exclusive to cancer patients, but includes any medical treatments your doctor prescribes. This medical board is not above the law.

November 15, 2021

Alaska State Medical Board

Nancy Konop

16320 Black Bear Circle Anchorage, AK 99516

907-244-7733

To whom it may concern:

In response to the recent article in the Anchorage Daily News by Annie Berman titled, "Dozens of Alaska doctors are asking the State Medical Board to investigate physicians spreading COVID-19 misinformation," I wanted to share a few of my personal insights regarding one of the physicians mentioned in the article, Dr. Ilona Farr.

Dr. Farr has been my primary care physician since 1995. When my son was born, she became our family physician. She has helped me and my family negotiate and

overcome several significant medical conditions including, cancer, orthopedic trauma, brain injury, immunology issues and numerous other conditions. Throughout this time, she has always provided accurate information; she counseled, informed, guided, referred and empowered us as we navigated the rather difficult medical choices that were available. The knowledge, commitment and energy she dedicated - and continues to devote - to the holistic care of not only my family, but to all of her patients has always far exceeded expectations.

Regarding the current, COVID-19 pandemic, Dr. Farr has been a strong advocate for vaccination. Given my pre-existing medical conditions, she invested hours of her own time, trying to assist me in getting the vaccine earlier than my actual age would permit me to be vaccinated. More recently, she counseled me, my husband and my son to get the booster shot as well. Applying my personal experience across her practice, I know she cares deeply about her patients and works diligently to heal them as well as empower them to help themselves to heal and then remain healthy.

Any potential action that would impede her ability to continue to provide excellent healthcare to not only my family but the Anchorage community at large, would be an egregious and detrimental loss.

Sincerely yours,

Nancy B. Konop

Subject: Second opinions.

To

Whom it may concern I am absolutely astonished and saddened that doctors are no longer allowed to have different opinions. There is a reason I choose the doctors I do over the ones I don't want anywhere near my family. My husband is a RRT and works with most of the doctors waging war against others with different opinions. And to be honest I don't agree with them, and the doctors I choose to see allow me that choice as it is my body, my family and my life! No one else has the right just because of a degree to choose for me what is right. If the board chooses to side with the doctors that want to take away others rights to varying options then they are taking away the science and ability of great doctors to do what is right for THEIR patients.

Thank you,
Megan Love.

Subject: Support for Dr. Farr and Dr. Nolte

To whom it may concern,

These great doctors are holding up their oath by trying to help their patients. Few doctors seem to be "practicing medicine" as it relates to covid, as many doctors are not even seeing patients that may

be affected by covid or are affected by covid. Dr. Farr and Dr. Nolte are "repurposing" medicines that are safe for humans according to the FDA and have proven to have some benefits related to covid symptoms, they are doing no harm and actually providing hope. None of their patients are complaining and are only grateful because they are doing so well. This is absolutely immoral that Dr. Farr and Dr. Nolte are even being questioned about the services they provide. Please do your moral part and keep Dr. Farr and Dr. Nolte's medical credentials with the State of Alaska.

Sincerely, Sarah Roberts

Subject: RE: State Medical Board regarding COVID treatment practices

To Whom It May Concern:

As citizens in a free nation and of the most free state, Alaska, we should be allowed to choose our doctors and treatments according to what works best for us, as individuals. What works for one person may not work for another. We all have different beliefs and should be allowed to see the doctor of our choice and to have access to a variety of treatment options for this very reason.

Traditional therapies and methods for chronic pain and other maladies I've experienced did not give me relief. However, when I sought out healthcare professionals that offered alternative treatments, I have had much greater results in my health and in my life.

Give us the right to choose - which is already ours inherently!

Thank you,
~Heather Bennett

Subject: Public comment to Alaska Medical Board

I am a retired RN with a 4-year degree writing in opposition to the petition afloat among doctors in Anchorage to remove the licenses of Dr. Iloana Farr and Dr. John Nolte for having prescribed the off label use of Ivermectin and Hydroxychlorquine for treatment of SARS CoV2 viral infection.

This petition is a shocking and in my view, cold-blooded stance for any physician to take given the Hippocratic Oath they all take to **do no harm**. Since mid 2020 there has been abundant evidence in medical practice from all over the US and other countries as to the efficacy of these drugs to treat SARS

CoV2 and PREVENT DEATH. Physicians have treated many thousands and lost very few to death while doing so. Dr. Farr's record is treatment of over 700 in Anchorage having lost only 1 who was NOT allowed the medication while hospitalized!

Intentionally ignoring such successful results and refusing to allow these effective treatments when they have long been proven extremely safe is what should be considered malpractice, not the success these doctors and many others like them have had. A team of international physicians in early 2020 are the ones who, while searching for existing medications that could be repurposed for treatment of SARS CoV2, were the first to present the efficacy of Ivermectin and Hydroxychloroquine. Dr. Pierre Kory presented their combined research results to a US Senate Committee pleading for the Senate to urge the FDA, CDC, and other controlling agencies to grant the use of these medications for off-label treatment of SARS CoV2.

How can an honest physician of any standing, much less a Medical Board be willing to bury such abundant evidence of efficacy when doing so literally sentences to potential death folks who then can't acquire such effective and prophylactic medications from their physician?! I am incredulous at the level of malpractice going on in the name of medicine.

Article 8.11 of your own Board Guidelines & Policies states:

8.11 Neglect of Patient

Physicians are free to choose whom they will serve. The physician should, however, respond to the best of his or her ability in cases of emergency where first-aid treatment is essential. Once having undertaken a case, the physician should not neglect the patient.

It IS NEGLECT of a patient if a physician is aware of an effective treatment and refuses to administer it to their patient to save their life or prevent potential death! This is not even subtle.

The W.H.O. years ago made all physicians responsible for the availability of these 2 medications when they were placed on the international list of ESSENTIAL MEDICATIONS. That means they are already deemed SAFE and ESSENTIAL. They are zinc ionophores enabling zinc into the cells preventing replication of this virus and over the course of the infections reducing viral load. EVERY physician is responsible to have done the research themselves. We are, after all, in a state of emergency response regarding SARS CoV2. Everyone knows that!

I speak from personal experience. My husband and I took Hydroxychloroquine years ago while we taught school in Yemen. It had no negative effect on us with constant long term use. We have both had SARS CoV2, likely D variant, and used these medications, which we acquired in advance by telemed, and at 73 and 69 (with diabetes) did well and have recovered fully. We are grateful for the efforts, research and sacrifice that made our care possible!

PLEASE, do what you can for the authorization of these proven and effective treatments for physicians in the State of Alaska. Stop the needless deaths. If you find no other reason, we have been given as a nation the RIGHT TO TRY and we deserve it in this SARS CoV2 climate.

DO NOT remove professional license to practice medicine from either Dr Farr or Dr Nolte or any others that a pack of doctors would attack in this manner. These doctors are administering the standard of care, and very successfully. What are the efficacy records with SARS CoV2 of the physicians signed onto the petition to remove the licenses of doctors Farr and Nolte? Can others claim that of 700+ patients they have only lost one????

ALSO DO NOT remove the right to practice from ANY alternative medicine practitioners in the State of Alaska. There are many for whom alternative treatments are the only thing keeping them alive or healthy. I heard a lady testify publicly that the treatment she receives from her alternative medical doctor is the ONLY treatment that has ever worked at all against her rare but fatal kidney disease. She testified that if her doctor can no longer practice she will surely die.

DO NO HARM! It would be harmful to remove license to practice from her doctor!

I thank you for hearing my complaint and requests!

Respectfully,

Subject: Early treatment for COVID

To the Alaska Medical Board,

Why is an early treatment that involves a 40 year proven efficacy Nobel prize winning drug, considered such a threat and offense to the medical board? If Ivermectin, when administered early upon onset of COVID keeps people out of the hospital; why would you oppose it being prescribed? Why would you punish doctors prescribing it. Why is the Vaccine considered the only acceptable remedy to this "pandemic"? Why are 2.5 million illegal immigrants that have already crossed our southern border this year during a pandemic not being test for COVID or being mandated to take the vaccine? Why are we being denied to choose for our own bodies?

Please see article about Ivermectin below.

Subject: COVID19 Early Treatment Thoughts

Dear Medical Board,

I write to you as an ICU nurse who has been working COVID wards, step down COVID wards, and occasionally ED since approximately March of 2020. I understand that you are under petition by Providence's Doctor Gonsette to take action against fellow doctors who are prescribing early treatment with Ivermectin and Hydroxychloroquine, among other protocols. As an ICU nurse, I have loyally cared for the patients MD Gonsette is understandably worried about and fatigued by, and in my years of experience I have not once had to care for a patient suffering from side effects of Ivermectin or Hydroxychloroquine. I have been appalled and discouraged, thoughts, by the lack of proper treatment protocols in hospital and out of hospital; leading to patients only being admitted upon the urgency of cytokine storming, when Remdesivir is not effective and may only cause negative side effects - such as kidney failure requiring CRRT (which most of us ICU nurses view as a death sentence when paired with intubation in this population). I myself have been exposed to COVID more times than I can count, and I credit my lack of severe infection to treatments I've taken of Ivermectin, Vitamin D, and other evidence based medications. Although these treatments are (unfortunately) not "mainstream" as MD Gonsette wrote, I urge you to consider that a medical practice run my "mainstream" thinkers will never truly reach its potential for healing and doing no harm - it is an echo chamber that shows no respect for the diversity of knowledge and experience required to treat this complex disease. We desperately need doctors such as Illona Farr, who spoke up during the COVID Early Treatment Summit if we are to bravely fight this, and protect our Alaskan community from further tragedy, fear, and unnecessary loss of life. While some may urge that prevention is the best medicine (in reference to the vaccine) I plead that we do not forget our due diligence to those already sick and suffering - whether in the hospital OR at home. Thank you for your time and consideration of this. Please consider reaching out to me if I may be of any service.

Respectfully,

To: Board, Medical (CED sponsored) <medicalboard@alaska.gov>

Subject: Investigation of Physicians using early COVID treatments.

Alaska State Medical Board Members,

Please support the independent practice of physicians who are utilizing all tools possible to help patients with early treatments of COVID. These physicians are not only speeding the recovery of these patients but reducing the hospital burden by keeping them out of the hospital. There have been no reports of over-prescribing or mis-prescribing by these providers and there have been no reports of negative outcomes from their practices. If this pandemic is truly a crisis, it demands the best critical thinkers to work through all options safely. This is at the heart of the art and practice of medicine. Do not tie their hands by preventing them from helping their patients. To do so will further erode the trust the public has in the medical profession.

Additionally, please speak out against the overreach of state pharmacists who have refused to fill prescriptions written by licensed physicians. Pharmacists are not trained nor licensed to diagnose or treat patients. This ability lies fully with the prescribing physician. Do not allow the political world to dictate how the medical community is to practice their art.

Have courage. Support your colleagues and patients.

Sincerely,
Cari S. Miller

Sent: Tuesday, November 16, 2021 1:54 PM
To: Board, Medical (CED sponsored) <medicalboard@alaska.gov>
Subject: FREE CHOICE IN MEDICAL TREATMENT

Dear Alaska Medical Board Members:

I am writing to express my concern for and support of free choice of treatments for patients and their doctors, as well as the accessibility of particular medicines for COVID.

Pharmacies should have no say, opinion, or determination in what medicines are provided to patients whose doctors, along with their patients, have determined a course of action to hasten the patient's recovery. The pharmacy's role should be only to fill a prescription (in the best of their ability to make that medicine available) that a medical doctor has deemed the appropriate treatment for a patient. They should have no influence or participation in a decision regarding the type or method of treatment for a patient. It is completely wrong for any pharmacy to refuse fulfillment of a valid prescription.

Prescriptions for Ivermectin and Hydroxychloroquine, for whatever use, including COVID, if prescribed by a doctor, should be fulfilled without question. Doctors and patients together should be able to decide a patient's treatment plan without interference from any outside source.

Additionally, patients should be the ultimate decision makers about their own treatment. Hospitals and doctors should be required to heed requests for the types of treatments patients request, especially if the patient is direly ill. If a patient is permanently restricted or dies after requesting/demanding a particular treatment, then the hospital or doctor who refused that treatment should be held responsible.

Dr. Farr and Drs. Nolte should not be punished for doing their jobs properly and attempting to give their patients the best care possible, even at great risk to their personal welfare and professional careers.

Do not let our medical system continue to become tainted and corrupt. Please uphold the concept and ideal that the medical system has always strove to maintain--that a patient and their doctor can determine a patient's best treatment and NOT others, who are outside of that patient's situation and who may have other ulterior motives for any treatment they may feel is appropriate.

Sincerely,

Inez Garner

Subject: Targeting of Doctors providing early treatment for Covid

Dear Medical Board,

What could possibly be wrong with early outpatient treatments by professional health care providers? People are being told to go home and come back to the hospital only when the Covid-19 infection has caused breathing difficulty.

Doctors have taken an oath to "First, do no harm" and that is violated in my opinion by the doctors that are not offering early outpatient Covid-19 care. Alaskan doctors who advocate and provide early treatment should be commended

for their help in keeping our hospitals from being overcrowded with ICU patients. How many more ICU cases would there have been without the early treatment care of doctors that didn't abandon their patients in a time of intervention

and needed care? We have been told from the beginning that overcrowded hospitals were the biggest concern to the community and yet the prevention measures that some are taking are being targeted by the hospitals and pharmacies.

Thank you for your time,
Trina Lovdahl

Subject: Covid care

For the life of me, I can't understand why there are any "grave concerns" about therapeutic treatment being offered to "us peasants" as treatment for Covid. It seems to me that any steps that may help in this "pandemic" should be taken. Especially since early treatment is proven to help reduce hospitalizations.

As far as I know, a Physician's first responsibility is to "Do no harm". I have yet to read of a case where it's been proven that therapeutic treatment has caused harm. If you have an example, please send it to me.

When the pandemic first hit, I started on a vitamin regime. I have been carrying on my life and had no problems. I am 77 years old and a bit out of shape, but would like to get an antibody test to see if I don't have as much protection as others that have had many vaccines. It seems to me that opening up antibody testing sites would inform people of their protective status.

Please consider your responsibilities to treat all people equally. and to allow for diverse opinions.

Thank you,
Katherine Hicks

Subject: Medical Freedom

Hello,

It has come to my attention that a retired editor of ADN has started a push towards the Alaska State Medical Board to enforce guidelines on what he mistakenly refers to as misinformation. I would refer to what the CDC, FDA, NIH, Fauci, etc., has been feeding us for the last 18 months as PROPAGANDA. I have read the studies that the CDC published to prove their position and they are FLAWED. I urge you to open your eyes to this. People are dying from the BIOWEAPONS that are inaccurately referred to as "vaccines". People are dying once they are admitted to the hospital from rigid treatment protocols which include remdesivir and vents, and don't include treatments that would keep them out of the hospitals such as HCQ and IVM. What happened to "Do No Harm?". It has gone completely out the window.

Well, not completely. There are a few BRAVE medical providers who stood above the fray. They saw beyond the propaganda and were able to recognize the truth. They took the time to do their own research as "letting people die" was not in their vocabulary. Several hundred people in Anchorage have quickly recovered from the dreaded "COVID19" and stayed far away from the hospitals, which have become death traps. Thank GOD for these providers! What is going on in our world where those who do the right thing are threatened with persecution? Do we not live in AMERICA? Everything that is allowed to happen in the hospitals anymore has greatly increased the PEOPLE'S DISTRUST of the medical industry.

Stop the medical tyranny! Please allow the providers that know the truth continue providing care. If you want to investigate any providers, I believe it makes more sense to investigate those who let patients die on their watch. Those who refused to try Ivermectin or hydroxychloroquine which have been shown to save lives. We need to review the deaths that are written off as COVID deaths. What was the real cause of all the deaths? The truth will set you free. Be on the right side of history.

Thanks for your time,
Shannon Wileman, Pharm.D.

Subject: Early treatment of Covid-19

Dear Medical Board,

It has come to my attention that your scheduled meeting will be to discuss the possibility of revoking Alaskan doctors' licenses who practice early treatment of COVID-19.

Please allow Alaskan doctors the right to prescribe medications which are safe and have been shown to be effective in decreasing the risk of very serious life threatening outcomes related to COVID-19. I know this from personal experience as my family has had COVID and without these early treatments, which worked wonderfully, I doubt the outcome would have been the same for all of us. I, with no doubt, believe that these early treatments are preventing people from ending up in the hospitals. Should this not be the main goal for everyone, especially the medical community? These doctors in questions are wonderful doctors and truly care about people so I ask you to please reconsider any negative actions you may be thinking of taking.

Thank you for your time,
Gloria Elsholz

Subject: Outpatient treatment for COVID-19 in Alaska

Dear Medical Board,

It has come to my attention that the upcoming meeting on November 19, 2021 will explore the possibility of revoking Alaskan doctors' licenses who practice early treatment of COVID-19. The Alaska Legislature passed legislation which gave Alaskans the "Right to Try." This was not exclusive to cancer patients but includes any medical treatments that an Alaskan doctor prescribes. The relationship between a patient and a doctor is sacred and the Alaska State Medical board should have no jurisdiction over this relationship, especially when the CDC has failed to provide effective protocols for early outpatient treatment.

I am writing the board to ask you to consider early outpatient treatment of COVID-19 infection including vitamin supplementation for optimization of the immune system, monoclonal antibody treatment and repurposed FDA approved medications. Please allow Alaskan doctors the right to prescribe medications which are safe and have been shown to be effective in decreasing the risk of serious life-threatening outcomes related to COVID-19 infections. Ivermectin and hydroxychloroquine, when administered at proper doses, are effective and safe treatment options and are used worldwide. Despite the mainstream media's best efforts to discredit ivermectin, the CDC itself lists the drug as an integral part of its program for U.S. bound refugees. It also recommends it as a presumptive therapy for all refugees originating from the Middle East, North Africa, and Latin America.

Dr. Farr has used early treatment for over 720 Alaskans who have suffered from COVID-19 and has a 99.8% success rate in preventing serious outcomes. If the Alaska State Medical Board takes action against Alaskan doctors, who advocate early treatment, rest assured you will have a substantial outcry across Alaska and lives will be lost.

I lost my father to COVID-19. If there was a possibility that the treatments Dr. Farr prescribes would have saved his life my daughter would grow up knowing her grandpa loved her. Unfortunately, I was

unaware of such treatments when he got sick. I have since been treated by Dr Farr for COVID-19, I am thankful that she was able to prescribe medications that kept me from being admitted to the hospital.

Thank you for your consideration in this matter.

Respectfully,

Lindsey Tompkins

Subject: Early intervention

To whom it may concern...hopefully ALL of you!

In every medical issue from abarticulation to zygote intrafallopian transfer, when a problem is discovered getting it fixed ASAP is pretty much the standard. Do self-breast exams and get mammograms yearly. Have a colonoscopy...now. Blurred or double-vision could mean anything from needing new glasses to a tumor. A cough could mean one inhaled their saliva or lung cancer.

Treating something EARLY is pushed by the medical professionals, and drug and insurance companies for EVERY LITTLE ISSUE. I know of people who, because they listened to and/or felt their bodies, found some serious problems -- and they're alive today -- because those problems were taken care of EARLY enough to be treated.

I don't understand why you, our state medical board, are listening to the CDC and Fauci instead of actually doing some footwork on your own to find out how other states and countries are faring. Is it laziness on your part? Or just going with the talking heads? Or do you receive some financial gain in all of this?

When we have an Alaskan physician who has treated her patients EARLY with ivermectin, hydroxychloroquine, vitamins, and monoclonal antibodies and had great success, I would think you might LISTEN to her and her patients!

Actually take a few hours of your precious time and listen to those who spoke at the Alaska Covid Alliance October 30, 2021. You just might learn something.

Stop being followers and be LEADERS!

Kathy Miller

As To all concerned;

Please know that it is truly troubling to think that anyone would consider any course of action which would curtail the work of these professionals to treat Covid 19 patients with therapies that reportedly work far better than the so called, "approved protocol."

Is it not the duty of the medical profession to work diligently towards the best outcomes for their patient, rather than blindly follow the edicts of those whose motives might possibly be called into question?

Not the mention the question of the right of the patient to seek what they feel is the best. Pursue of action for themselves?

I appreciate your honest consideration of these important matters.

Respectfully,

Bill Jones

Subject: Misinformation in regards to Covid treatment

Dear board members,

It has come to my attention that quite a few doctors, including Dr. Gonsette, have reached out to you in regards to supposed misinformation being spread about early Covid treatment.

Dr. Gonsette testified before the assembly a couple months ago with the same message. She stated that there is a lot of misinformation being spread by citizens and doctors and she asked to come to her/other doctors with questions about COVID/the vaccine. I have not gone to her personally but I have heard her testimony and long before that I listened to/read what was being broadcast to the public by Providence, Dr. Zink, our health department and other doctors.

Because what I have been hearing for over a year now did not make a lot of sense past the initial couple of months of the pandemic I did do exactly that - I went and got a second opinion (like Dr. Gonsette encouraged us to do). And a third, and a fourth, and a fifth I listened to doctors who went through medical training in the US just as Dr. Gonsette did. And they have a very different opinion about COVID and the vaccine.

But I did not stop there. Since this is a global pandemic I listened to / read doctors from all over the world and there are THOUSANDS who beg to differ with Dr. Gonsette, Dr. Zink, and any other doctor who claims the vaccine is the savior of everything. And you know what is common among all of those different voices? They are all being actively censored because the information they provide does not fit the narrative that you need to drive your agenda of fear and control.

Yes, I am not a doctor or even medically trained, but the doctors I have listened to/read ARE. So no, the doctors Dr. Gonsette is asking you to investigate are not spreading misinformation. They are spreading information that differs from Dr. Gonsette's and the other doctors who have contacted you and they hate it because it goes against their narrative of fear and control. THAT is the reason it is labeled "misinformation".

Instead of investigating the doctors that are actually helping people stay out of the hospital and recover much more quickly you might want to turn your attention to Dr. Gonsette and her fellow doctors that support her and investigate them for the following:

1) They continue to refuse even simple vitamins to patients. Unless there is an adverse interaction with a medication the patient is taking there is no reason not to administer vitamins.

2) They refuse to administer Ivermectin to patients, even when the patient's doctor is requesting it. Their argument for refusal: Ivermectin is not FDA approved. That is an outright lie. Ivermectin has been approved for use by the FDA a long time ago. What they really mean by that statement is that it has not been approved for treating Covid. And yet: Off-label use is a common and accepted practice. Here is what the FDA writes about off-label use:

Why might an approved drug be used for an unapproved use?

From the FDA perspective, once the FDA approves a drug, healthcare providers generally may prescribe the drug for an unapproved use when they judge that it is medically appropriate for their patient.

You may be asking yourself why your healthcare provider would want to prescribe a drug to treat a disease or medical condition that the drug is not approved for. One reason is that there might not be an approved drug to treat your disease or medical condition. Another is that you may have tried all approved treatments without seeing any benefits. In situations like these, you and your healthcare provider may talk about using an approved drug for an unapproved use to treat your disease or medical condition.

They still refuse to administer it. And by the way, Ivermectin has been proven to reduce the death rate of Covid by about 85%. Again, unless there are major known side effects with medications the patient is taking why would anybody not administer the medication as requested?

3) The "Right to try" is law in Alaska. If the patient is requesting a medication the doctors, like Dr. Gonsette, that are refusing to administer Ivermectin are breaking that law.

4) The doctors who refuse to administer Ivermectin and even vitamins are breaking their oath to "not play God" and "accept help when their knowledge is limited".

The vaccine has proven to be not nearly as effective as has been claimed. Ventilators and Remdesivir have turned out to not be nearly as effective as Dr. Gonsette and her colleagues claim. And yet they refuse everyone that wants to try something different the right to do so. THAT is what needs to be investigated.

Sincerely,

Irene Quednow

Subject: Unfair targeting of doctors providing Early Covid-19 Treatment

Dear Medical Board,

What could possibly be wrong with early outpatient treatments by professional health care providers? People are being told to go home and come back to the hospital only when the Covid-19 infection has caused breathing difficulty.

Doctors have taken an oath to "First, do no harm" and that is violated in my opinion by the doctors that are not offering early outpatient Covid-19 care. Alaskan doctors who advocate and provide early treatment should be commended

for their help in keeping our hospitals from being overcrowded with ICU patients. How many more ICU cases would there have been without the early treatment care of doctors that didn't abandon their patients in a time of intervention

and needed care? We have been told from the beginning that overcrowded hospitals were the biggest concern to the community and yet the prevention measures that some are taking are being targeted by the hospitals and pharmacies.

Furthermore, it's not surprising that many are fearful of entering our hospitals, follow the money seems to be the case here, instead of "First, do no harm".

Thank you for your time,
Trina Lovdahl

Subject: Please Don't Destroy the Hypocratic oath

To whom it may concern,

Protecting the population against unsafe physicians is a good reason for your board. Please do not let your power be used to further a political agenda by some physicians, to damage other doctors who are caring for their patients with success and using established medicines.

Everyone wants to have a doctor that cares for their needs. Every body is different.

The right to be informed of medicines and procedures, and to choose, is essential to life. Ivermectin is recognized by the National Institute of Health as a sound medicine. See below

A five-day course of ivermectin for the treatment of COVID-19 may reduce the duration of illness pubmed.ncbi.nlm.nih.gov/33278625/

What happens between a man, woman, and a child and their doctor, is their own business. It is wrong for any other doctors to interfere, with political interests. Especially if, the doctor in question has a record of helping patients heal and be well cared for.

The "best practices" referred to, are controversial themselves. Death, and permanent injury has resulted to patients who agreed to go along with the "best practices" that are, according to the CDC,

experimental, and the CDC has a bank to collect the data of those cases.

<https://www.cdc.gov/vaccinesafety/ensuringsafety/monitoring/vaers/reportingaes.html>

Please don't destroy the Hypocratic Oath, by giving credence to political warfare within the medical community. We should be able to trust the doctors to act in the best interest of their patients.

Thank you for time and consideration,

Julia Tenison

Subject: Regarding Dr. Ilona Farr and Dr. Jon Nolte

Dear Members of the Alaska Medical Board,

Thank you for all you do to ensure our citizens are safe by looking into legitimate concerns regarding our physician conduct and licenses. You have protected us from doctors who are involved in the abuse of prescriptions and drugs, received DUI violations and involved with child exploitation. These are Legitimate violations of a physician's oath to, "Do No Harm".

I am writing you today to ask that you, our Medical Board, consider this Oath to, "Do No Harm" to our communities in Alaska as you weigh in on the topic of Early Treatments for Covid 19. Suspending the licenses of Dr. Farr and Dr. Nolte would violate this oath and hurt our families and further strain our hospital systems that have had to transition to "Crisis Standards of Care" this year.

There is a lot of information out there with scientific articles, various studies, expert testimony about the importance and efficacy of early Covid treatments including nutritional and supplemental support as well as repurposed drug use of monoclonal antibodies, Ivermectin, and Hydroxychloroquine.

Instead of sending you more of this information which you could find readily if you would but ask, I would like to use myself as a case study. I am a 40+ year old immune compromised nurse who got Covid this year. My family friends and physicians were very worried about me. I ended up at the hospital several times and once by ambulance. My fevers were as high as 102.9 F and I was able to get early monoclonal antibodies as well as Ivermectin. Although Dr. Farr's office was full, she took the time to call me after work and arrange a telehealth visit the next day. Dr. Farr reviewed my extensive list of medication's and allergies before giving me informed consent about and prescribing me Ivermectin as well as telling me to not take Hydroxychloroquine due to a concerning interaction with my other meds. Because of the interventions Dr. Farr arranged for me and the early nutritional supplementation I was on, I only missed two weeks of work and was able to go back to my nursing job on the front lines to help relieve some of the pressure from our current hospital strain. Of note this is the first time in the last 10 years that I have not been hospitalized due to a viral or bacterial infection with a high fever. I average four days in the hospital each time.

Bottom line, I believe Early COVID-19 treatment interventions work. If nothing else, when has it ever been wrong to encourage our citizens to be as healthy as possible, exercise and to increase nutrition or add in supplements if their diets are nutritionally poor? Are we afraid that if our patients are too healthy we will be out of business? Dr. Farr and Dr. Nolte should be commended for taking care of our community in the early phases of their COVID-19 infections and for fielding the hundreds of calls they receive from people who are concerned that they "may have Covid" and don't know what to do. Can you imagine how our ERs would look and how strained our hospitals would be with all of these patients arriving at our doors.

Again I thank you for taking the time to legitimately review the conduct of our doctors who are violating our trust. However, going after doctors Farr and Nolte for their Early Treatment of Covid Is NOT a Legitimate pursuit for the precious time of our Medical Board of Alaska. I urge you to take a stand for every Alaskan and dismiss this case with prejudice.

Respectfully,

An Alaskan Nurse with over 15 years of experience

Subject: covid

Dr medical Board

Concerning Dr Farr has had a fantastic success rate in preventing serious problems with Covid patients.

My Dr is tied in to Providence, but I would guess Dr Farr success rate is much higher than Providence.

It would be a big mistake on your part to take away the license of any Dr in Alaska that advocates for early treatment.

It seems the Providence Dr are encouraged to tell the patients to wait till they are really sick and then come into the hospital. It would be like telling someone with a broken leg to wait till gangrene sets in.

Subject: Let Doctors be Doctors

Dear Medical Board,

It has come to my attention that "best practices" is defined as the guidelines put forth by one institution, the CDC. Unfortunately the CDC has failed to provide protocols for early outpatient treatment of COVID-19 and has lost substantial credibility by making frequently contradicting changes in their policies. It is my belief that especially during this COVID-19 pandemic, "best practices" should be based on evidence from various sources including institutional, worldwide and expert opinion. Furthermore under guidance from qualified healthcare professionals, use of repurposed FDA approved medications for treatment of COVID-19 should be considered.

Subject: Mandates and early treatment for covid.

To whom it may concern,

I have been a nurse for almost 30 years and have never seen the lack of knowledge applied as much as it is with this covid 19 virus. There are many virologists and immunologists that are speaking out and not being heard or listened to because of our lack of leadership in the upper levels of government in the United States. If you ask any immunologist, there needs to be a certain group that will develop immune response to a virus and that it's called herd immunity. There is a huge herd immunity that has already developed in our USA population and that doesn't need to be ignored. These covid 19 vaccine mandates are unconstitutional and should not be allowed. It has been proven over and over in other countries that early treatment is the best method of treatment and also the use of Ivermectin and Hydroxychloroquine have been proven to work on this virus in the lab and in use in populations like India. They have allowed the mass of people to be infected and to build up this herd immunity. Please support doctors in Alaska that are willing to try this cheap and effective treatment. Allow the pharmacies freedom to fill these prescriptions! Please stop the covid 19 vaccine mandates!!!

Sincerely,

Barb Jackson, RN

Subject: Support of Doctor Farr

To whom this may concern. I'm just writing to voice my confusion as to why we the public are not being allowed to get the medicines we need to help fight the Covid 19 virus? I have been one of the lucky ones who have not gotten the virus but know many whom have. My 41 year old son was very sick with Covid 19 and could barely get out of bed for 14 days. He was given Ivermectin and was on the mend the next day. My 66 year old sister ended up getting the Delta Variant and she also took Ivermectin and felt better immediately.

I know if I end up with the Virus, I will be wanting this Ivermectin drug or the Chloroquine drug.

Please let they drugs be available and leave the doctors alone who want to prescribe them. Dr. Farr is a great person and amazing doctor. She is dedicated to healing her patients and has a great track record for getting her patients through this awful virus and she should be allowed to continue doing so. I think doctors and patients deserve the right to be able to choose. Thanks for listening, Marcia Brown

Subject: November 19, 2021 Board Meeting

Good Day Alaska Medical Board Members,

In looking over the agenda for Friday's Board meeting, I didn't see this item listed, but an article in the Anchorage Daily News has brought to my attention an effort by an Anchorage psychiatrist, Dr. MeriJeanne Moore, to prompt the Alaska Medical Board to investigate certain Alaska physicians for spreading "misinformation".

The misinformation referenced by Dr. Moore apparently was presented at an event billed as the "Alaska Early Treatment Medical Summit".

I did not attend this event, and I saw nothing in the ADN article indicating Dr. Moore attended the event. I'm left wondering who is actually spreading the "misinformation".

Surely, engaging in dialog to further our understanding of issues related to the treatment and prevention of disease is encouraged in our country? I can only hope that Dr. Moore is interested in finding successful prevention and treatment for patients and that she's not just trying to silence the free exchange of ideas.

I encourage the Board to address legitimate agenda items and avoid entanglement in a web of "cancel culture".

Thank you for your time,

Rod Wheelles

Subject: Fwd: Alaska Medical Board

Greetings,

Alaska Medical Board Members,

My name is Frank Kapelari, I have been a resident of Anchorage since July 1982. I had a severe case of Covid-19 in September and using

Early Treatment Protocols I was cured, total duration of 2 weeks from onset to fully recovered, not to mention I am 65 yrs. old with coronary artery disease. There is great survivor success for those being treated with Early Treatment Protocols ,

There was an article written recently with the attempt to discredit Dr. Ilona Farr and Dr. John Nolte . To even suggest that a Medical Board

would revoke The Medical License of any doctor who is trying so hard save a person's life during this pandemic and only receiving criticism

for their efforts is absurd. Treatments that are considered unproven are another subject that should be reviewed , Ivermectin gets a fair amount

of negative comments yet it seems to have been approved by the NIH or at least it is under evaluation, and it is approved in some states for early treatment. (find attached 3 pages NIH documentation)

There will be many lessons learned before this pandemic ends , if it does. now is not the time to disqualify anyone who can save a life. Please keep all our doctors working, lives are depending on it.

Sincerely

Frank Kapelari

Subject: Medical Tyranny For Profit

We have personally, experience Medical Kidnapping & Tyranny in Alaska, but the State of Alaska is not immune to Medical Tyranny, but Alaska's largest hospital are definitely taking the lead, even more since COVID. We are with understanding the Alaska Medical Board scheduled meeting will explore the possibility of revoking Alaskan doctors licenses, who practice early treatment of COVID-19. The Alaska Legislature passed legislation which gave Alaskans the right to choose their own doctor, medical agent, and the medical treatment they want to receive. It is called Medical Health Care Directive (POA for Health) but so many Alaskans Health Care Directive are simply being ignored by the Hospitals. The Laws are there, but are being ignored.

The Alaska Medical Board is not above the Law, so maybe the Board should pay serious attention to the out cry of Alaskans who are loosing their loved ones to this Medical Tyranny. Please listen to their cries for help, so the members of the Medical Board all have clean hands before Our Heavenly Father, Jehovah. We all have to be accountable some day to Our Heavenly Father, for we can not hide from the Eyes of God. We ask that you listen to these doctors who are saving life , and not even consider revoking their license for doing only GOOD.

Subject: Allow Doctors to freely treat their Patients

Please see my attached letter regarding countering recent complaints against doctors treating CoVid patients.

Attention: Members of the Alaskan Medical board. 11/16/2021

After nearly two years of trying to manage Covid cases in our State, it is astonishing that our International, National, and/or State medical establishments have not supported or been willing to explore a variety of treatment options for the virus. Instead, research time and money has been focused on a coerced and prize winning (\$49K for a lucky Alaskan resident) roll out of now mandated non-durable vaccines that still maintain untimely safety concerns. Furthermore there is no long term plan with how virus variants and perpetual booster shots will be managed for future out breaks.

Breakthrough cases, hospitalizations and death still occur among the vaccinated and numerous adverse events have been reported in the VAERS system. It is notable also that there have been more deaths caused from this vaccine than total deaths combined among 30 vaccines developed over the past 70 years. Additionally, there were clear testimonials from vax injured people at a hearing in Washington DC. hosted by Wisconsin Senator Ron Johnson in late October. Sadly, no representative from the CDC, NIH, or FDA was reportedly present despite invitation. This hearing was taken down from YouTube within a couple of weeks for "violating YouTube's Community Guidelines". This is a common yet unfortunate act of social media outlets who are controlling community narratives for the vaccine and against optional treatment plans. Given such evidences, in addition to trying to perfect a vaccine, doctors need to be treating CoVid cases in a free and timely fashion without dictates from empowered entities, media outlets, insurance companies, bureaucrats, and hospital administrators. All of whom are not on the front line with CoVid patients anyway. It is widely known that CoVid is a bi-phasal disease, whereby if treated early (5-7 days) viral loading and replication can be controlled. This then inhibits the severity of symptoms in the 2nd phase-- an over-reaction

of the body's cytokine storm / immune response, hence attacking bodily organs and/or causing consequential viral shedding. Most doctors should be fully aware of this and many have been successfully treating patients early in phase 1 with a variety of natural-pathic and re-purposed drugs that already maintain records of safety, dosage and side effect data. These doctors are more interested in treating and saving their patients' lives rather than following our medical establishments' limited directives of vaccinate, 'wear a mask, isolate, but when/if lips turn blue, go to the hospital for treatments that are likely going to help you die'. This is not a multi-layered approach to fully treating and sincerely helping patients. We need to pull out all the tools possibly available and apply them per patients' needs and rights.

I understand this board is being asked to question the wisdom and practice of certain medical providers, namely Dr. Farr and Drs. Nolte, and possibly restrain them from serving their patients. If this board is NOT interested in allowing providers the freedom to serve their patients as they care to be served, allow hospitals to let people die and care less that providers maintain their true Hippocratic oath, then continue on with their demands and let people be ill and hospitalized or die of CoVid without question. Otherwise please help counter such irresponsibility and stay muted to the nonsensical complaints against those who are truly trying to help their patients.

Finally, be mindful that while the U.S. maintains 4.5% of the world's population it represents 25% of the international CoVid deaths. Somehow and somewhere within the government systems our medical establishments, social media outlets, and appointed journalist are responsible for these deaths as they try to silence, de-platform, and unlicense doctors and true science. As a medical board for the State of Alaska, please do not be part of these bad actions and applaud those who are sincerely and successfully treating and saving their patients from CoVid and other illnesses.

Best Regards and Thank You for acknowledging my input,

Rhonda Hubbard

Subject: November 19th hearing.

To whom this concerns,

Please consider the facts. Please look at the real flesh and blood proof right here in Alaska. Early treatment is saving lives.

My neighbors were very, very sick with covid. Rather young, in their 40s. The wife decided to take ivermectin, the husband was afraid to. Due to mass misinformation.

My neighbor got better and is still alive. Doing good.

She brought her husband to the hospital. They would not help him. He wasn't vaccinated. He got sicker and sicker. By the time he was willing to try the ivermectin, it was too late for him. He couldn't keep anything down. He died.

Please consider the numbers and knowledge of those who have received early treatment and recovered.

Cheap and at home early treatment is saving Alaskans.

Good truthful information (with early treatment) could save more.

Please consider that Dr. Ilona Farr has a track record of successful early treatment with many grateful patients.

Sincerely,

Early treated, covid recovered Alaskan,

W.Sternhagen

Subject: Medical Freedom testimony

Dear Medical Board members,

Please let Alaska doctors continue their ability to provide lifesaving early treatment for Covid-19 patients. These treatments have proven to be very effective in Alaska, the United States, and multiple countries around the world. There is no reason to limit Alaskans' options for treating Covid-19. We should be using all available treatments to help people recover from Covid-19. Thank you for your consideration of my testimony.

Subject: In support of Dr. Farr and Dr. Nolte

Alaska medical board,

I'm in support of the doctors and the treatments they're helping their patients with including but not limited to Ivermectin and Hydroxychloriquine. I can't imagine where my husband would've been without this treatment after getting Covid. He had been vaccinated earlier in the year and still managed to get it and a rather bad case of it.

As I'm in support of helping people in whatever manner the doctors deem necessary, I would hate to see them disbarred from practicing in Alaska. Please reconsider this hasty action.

Thank you, Mrs. Kim Gaines

Subject: Freedom to treat Covid!

To whom it may concern,

My name is Joni Tanner. I am an Anchorage resident these past 20 plus years.

In August my husband got severely ill with Covid Delta variant. He came down with a sever fever August 2nd and it continued through ten days of quarantine without any improvement. In fact he was becoming much worse and loosing the ability to speak reason, breath, and eat or drink. He felt like he was dying. I know several people who have been hospitalized with Covid and who all dies in there so I was not about to send him there to die in isolation. I had been taking care of him and in a desperate

attempt to keep him out of the hospital I called Dr Farr's office. I had heard that she was one of the only Dr's in Anchorage willing to treat Covid patients with life saving Ivermectin and Hydroxychloroquine plus antibiotics.. a triple threat to this disease. As soon as he took the first doses he began to improve and came off all fever reducers and began to breath better and his heart stopped hurting so badly.. he had been having atabknv heart pain for at least 4 days and fevers between 102-105 constantly and his oxygen levels were in the 80's... All I can say is THANK GOD for this brave doctor! She saved my husbands' life! I have not one single doubt that my husband would have passed away and soon had it not been for Dr Farr. Recently my husband got to hear Dr Farr speak and he began to weep just overwhelmed with gratitude because he knows she saved his life!

She deserves a Purple Heart for all she is doing for the souls of Anchorage!

I am so outraged that she and Dr's Nolte are under siege for being willing to help heal people! My god! What has this country come to? These Doctors have served their patients for decades and decades with outstanding reputations! And there is a safe, affordable and effective treatment of this virus and this treatment is being blocked and censored and restricted and PEOPLE ARE DYING! Blood is on so many hands right now and I hope and pray this medical board will stand up for life and true freedom that once inspired you as American Dr's!

Keep politics in check and stop bullying good doctors who are following their consciences.

We the people WILL NOT TAKE THIS SITTING DOWN!

If you are a medical doctor who restricts early treatment many people will continue to die of a treatable disease! My husband would have been one of those numbers! We have 6 children.. they would be fatherless. Can you honestly justify your actions? You took an oath to "do no harm". He or she who knows the good they should do and refuses to do it guilty of harm. Please please do the right thing. Be brave. We are loosing our freedom and we are killing our own people! Stop this madness!

Sincerely
Joni Tanner

To: Board, Medical (CED sponsored) <medicalboard@alaska.gov>
Subject: Best Practices/Covid (Friday meeting)

To whom it may concern:

History will write what the true 'best practices' for Covid are later in the months and years to come.

What we have now is a response from the majority of Drs. in Anchorage saying that you treat the symptoms you have and go to the ER if you cant breathe. Really?

Preemptively, I sought advice from my primary care provider to be prepared if I were to get Covid. She said she would not write a prescription for Hydroxxy and a Zpack which was seeing so much success throughout the lower 48 from Drs. that were actually treating many more people than we were seeing up here with Covid and she said 'Providence ER is seeing real good success with steroids and antibiotics' for anything more serious.

Without any good solid advice from our local and statewide medical people, (other than masking, distancing, and sanitizing) I began researching and reading studies about vitamins and what the national medical people were learning about this virus, including reading the 2005 NIH published article of SARS 1 and Chloroquine effectiveness on that virus. Then it got political.....and a war began, which is awful in the middle of a crisis.

As fate would have it, our household got Covid. We quarantined and felt good about being able to take care of each other. As prepared as we thought we were, I ended up driving my friend to the ER when her breathing became labored. They X-rayed her lungs, put her on oxygen, and had her call me for a pick up a couple of hours later. Her only prescription was an albuterol pump thing to inhale every 4 hrs as needed. They told her her airways were inflamed, but gave her nothing for that inflammation. Needless to say, she was struggling by morning. Phone calls to her 'home care nurse' were frustrating and we got the runaround for hours trying to get her to speak to a Dr. to get a prescription for steroids for her little pump thing or pills to take orally. Her primary Dr did not return calls. Hours later they finally said they would not prescribe any type of steroids for home use and that she would have to be in the hospital to receive that treatment....inevitably that is where she ended up.....for 5-6 days and a \$250K hospital bill. This is "best practices?" I guess it may be by someone else's standards.

Some third world countries are doing better with their Covid statistics than America by using both Hydroxy and Imervectin. They are safe and people do not die from taking them. They have an incredible safety record. The only problem with them is that they are 'off patent' and dirt cheap.....which makes them political.

It is unbelievable that local Pharmacies are refusing to fill prescriptions from Drs. That Alaskans need to order from Canada without a prescription to get possibly lifesaving medicine because an Alaskan Pharmacy will not fill a prescription? Please explain the 'best practices' part again. They can be bought over the counter in many countries and here we have them specifically refusing to fill a prescription. Hmmm

History will judge us all. Please be on the right side. Empower the public to use the wise guidance from these Drs. that are under fire. Nutrition, vitamins, and meds if necessary to be able to act quickly before the virus ravishes the body.

We are supposed to ALL be in this together.

I do not personally know either of the 2 Doctors that are being disparaged but I sure wish I hadbefore we went through the 'Accepted 'Best Practices' Covid nightmare in Anchorage.

Sincerely,
Mary Anne Wivholm

Subject: Letter for Board Meeting

November 16, 2021

Dear Alaska State Medical Board,

I write this letter in response to the article in the Anchorage Daily News regarding physicians in Alaska writing a letter to the medical board asking to investigate physicians “spreading COVID-19 misinformation”.

I am not a physician or a scientist but I am a critical thinker. I have researched the COVID-19 pandemic since it began in early 2020. From the beginning, I questioned why physicians were not treating the virus from the onset of symptoms. I found after a few months that there were physicians treating patients with zinc, a zinc ionophore (quercetin, hydroxychloroquine, ivermectin, etc.), vitamins D and C. Unfortunately, the CDC and the FDA decided that was not the way to treat the virus, but to wait until the patient could no longer breathe and was admitted to the hospital. This was very confusing to me as I assumed that physicians would want to ensure their patient did not reach that stage and treat early on in the disease.

I watched the summit of the Alaska Covid Alliance in which the said letter is in response. I praise the doctors and scientists who spoke and attended the summit as they are the ones who like me, thought it best to treat from the onset of the virus to prevent hospitalizations and deaths. I especially want to thank Dr. Ilona Farr for her presentation as I am sure she knew she would be vilified by other physicians who have decided to not dig into the research and cases of thousands of practitioners who have chosen to be proactive and not reactive to the virus, and therefore have saved thousands of lives.

I have read studies on the protocols physicians are using that include ivermectin, hydroxychloroquine, zinc, vitamins D and C, and other medications that work together. I follow a prophylactic protocol myself and can say that it played a part in myself not contracting the virus from my husband who brought it back from a Fairbanks moose hunting trip. He contracted it on the airplane or in the airport, while I will say, wearing a mask the entire time. I took care of him during his experience that was short lived as he too was following the protocol. I believe the vitamins and quercetin we were taking inhibited the virus from replicating at the high rate of the Delta variant.

The NIH has changed their recommendation for the use of ivermectin for treating Covid from “against” to “neutral” in September of this year. Surely they have realized that it works, or at least does not harm the patient. The NIH also did a study on zinc ionophores to treat COVID and found they had a positive outcome. The paper is found on the NIH website.

I doubt any of any or most of the physicians signing the letter have done the amount of research that I have, read the studies on the effectiveness of the many COVID protocols, let alone have tried them for any of their patients. If a physician truly lived up to the motto “first do not harm”, they would at least have reviewed the plethora of research and try it on their patients. Neither hydroxychloroquine or ivermectin are dangerous drugs. Both have been prescribed billions of times around the world and have a proven track record of safety. Why not at least try it? You would think physicians would want to heal their patient before they were hospitalized.

The term “misinformation” is being thrown around like fall leaves in a hurricane. It’s used to cancel any information they do not want known because the information does not fit the narrative of the mainstream media, the FDA, the CDC, and others who want to keep the fear alive, and keep ordinary Americans like myself

in the dark. Frankly I am appalled by physicians who have chosen to not do their own research and blindly follow the CDC gods guidelines, in which none of them have been on the front lines actually treating patients with Covid.

I am asking each individual board member to watch the Alaska COVID Alliance Summit that is found on their website, read the protocols, studies, and white papers found on the COVID19criticalcare.com (FLCCC) and the AmericasFrontlineDoctors.org websites, as well as other well known scientists research.

I support the physicians who are treating their patients from the onset of the virus and implore the board to allow physicians to do their job and treat their patients as they see fit, not to bow to the physicians who have chosen to ignore research and tried and true medical protocols.

I thank God that there are physicians like Drs. Farr and Nolte, along with thousands of others around the world, that have chosen to think outside the CDC box and treat their patients from the onset. I often wonder how many thousands of lives would have been saved if more had stepped up and not worried about the persecution they might face for being proactive and putting their patients first over a government organization that they themselves have given well documented "misinformation".

Sincerely,

Sher Zinn

Subject: Testimony for November 19th meeting

Dear Medical Board,

I am writing regarding the request by several local physicians to investigate their colleagues who contributed to or participated in the Early Treatment Summit in Anchorage last month. As a lifelong Alaskan of nearly 60 years and a long-term patient of Hillside Family Medicine I am deeply concerned about this request for numerous reasons; however I want to be brief so I will just share my experience. For months - before the Early Treatment Summit - I have been taking many of the supplements that were suggested (Vitamins C and D, Zinc and Quercetin) while my husband has not. My unvaccinated husband as well as several of our vaccinated family members contracted Covid in October while I did not. My husband, **the only unvaccinated** member, had mild symptoms and recovered quicker than our vaccinated relatives. The difference was he was prescribed ivermectin, which he took. Ivermectin works - period. I have seen it's effectiveness over and over as both vaccinated and unvaccinated family, friends and acquaintances have battled Covid. I do not understand the continued push for vaccines and boosters that have not proven successful at preventing or spreading Covid while ignoring safe medications that have been around for decades and have proven effective against Covid. Please allow Alaskan doctors the *right to try* by using their expertise and experience to treat and care for their patients on an individualized basis - whether it's prescribing alternative medications effective against Covid or another form of treatment.

Respectfully,
Janet Birky

Re: Sound Medical Information and Ilona J. H. Farr, M.D.

Dear Board Members:

I am concerned about some accusations and aspersions being made against my friend Ilona Farr, M.D. Although we joke that our political leanings and religious inclinations are quite different, I support and celebrate her tireless and selfless efforts to prevent and treat Covid-19 in Alaska. My support is in a personal not a professional capacity.

I recently read the article by Mr. Pat Dougherty in the "Anchorage Daily News" titled "Alaska's medical board needs to act on misinformation." He does not provide any evidence of any training, background or experience to be opining on the issues in the article. He does not appear qualified to practice medicine or to determine how medicine should be practiced in Alaska. He does not appear to recognize the scope of the First Amendment. This public health issue is guided if not governed by many laws and regulations.

His allegation is troubling: "What does the Alaska State Medical Board, which licenses and governs the conduct of all doctors in Alaska, have to say about doctors who give clearly inaccurate and possibly life-threatening misinformation to the public in order to promote their personal political or institutional agendas?" Ask the wrong question and you invariably get the wrong answer.

The right question is compelling: "What does the Alaska State Medical Board, which licenses and governs the conduct of all doctors in Alaska, have to say about doctors who give clearly accurate and possibly life-saving information to the public in order to promote the public health and welfare at a tremendous personal and professional cost to themselves?" The Alaska State Medical Board should commend

and encourage them to continue sacrificing and caring for the community.

2

Would you provide or make available for copying Mr. Dougherty's written complaints and other correspondence with the Board? The Alaska Public Records Act (APRA) includes laws designed to guarantee that the public has access to records of government bodies at all levels in the State of Alaska. The law is available at Alaska Statutes 40.25.110 - 40.25.125.

The current experimental mRNA treatments and the more traditional adenovirus vaccine were subject to incomplete and abbreviated FDA "emergency use authorization" (EUA) review. Under section 564 of the Federal Food, Drug, and Cosmetic Act, the FDA was required to determine that there are no "adequate, approved, and available" alternatives. [https://www.fda.gov/emergency-preparedness-and-](https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/emergency-use-authorization)

[response/mcm-legal-regulatory-and-policy-framework/emergency-use-authorization](https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/emergency-use-authorization)

Many health care professionals and informed citizens remain concerned that this review of alternative treatments was never adequately or honestly undertaken. The official "studies" were carefully and strategically titrated to avoid an honest evaluation of a proposed treatment protocol. The "studies" did not include the specific uses of the medicines and combinations of medicines prescribed by Dr. Farr and others. The FDA has redoubled its efforts to avoid and preclude honest testing of possible "adequate, approved, and available" alternatives to avoid jeopardizing the EUAs. In the face of government recalcitrance and indifference, courageous doctors and health care professionals must step in and take care of us.

In addition, after the sketchy EUA analysis, the actual tests to determine the "safety and efficacy" of the two treatments and the vaccine were limited in scope and duration before hasty emergency approvals. Something just does not seem right.

A senior bioethicist who heads a research team at the National Institute of Allergy and Infectious Diseases (NIAID) is taking the lead at the National Institutes of Health (NIH) in the debate over the ethics of COVID vaccine mandates. Dr. Matthew Memoli, the director of the Laboratory of Infectious Diseases at the NIH, will argue against vaccine mandates during a December 1 livestreamed roundtable session open to the public. "There's a lot of debate within the NIH about whether [a vaccine mandate] is appropriate," David Wendler, a senior NIH bioethicist in charge of planning the session, told the "Wall Street Journal" newspaper. "It's an important, hot topic," he noted. Dr. Memoli opposes mandates for the COVID vaccines authorized for emergency use in the United States and has chosen not to be vaccinated.¹

<https://www.wsj.com/articles/vaccine-mandate-debate-makes-it-to-top-federal-researchagency-11636286400>

Banishing citizens who test positive for Covid-19 back home to isolate and decline and inviting them to go to the hospital when it is usually too late to treat is

¹ Dr. Memoli is a likely candidate for the next edition of Profiles In Courage.

3

inappropriate. The current failed plan not surprisingly successfully fills the hospitals with patients and fills the public with unnecessary fear and dread. You are indeed on your own.

The State must embark on a policy of prevention and early treatment. The State should review and follow as appropriate some of the recommendations set forth by the health care professionals with Front Line Critical Covid Care (FLCCC) and other authorities. <https://covid19criticalcare.com/>. Dr. Farr is among the few health care

professionals trying to prevent and treat the Virus with something other than the current experimental creations.

The Right to Try Act is a federal law that allows patients to try treatment options.

<https://www.fda.gov/patients/learn-about-expanded-access-and-other-treatmentoptions/right-try> and <https://www.congress.gov/115/bills/s204/BILLS-115s204enr.pdf> As a general proposition, federal law pre-empts conflicting state law; this federal law preempts

conflicting Alaska state law. Federal law protects a citizen who seeks to access and use a generic equivalent of Stromectol. The patient's access and use should not be and cannot legally be prevented by someone who wants to use Alaska law to deny access and use.

There is not a "flu season" and a "non-flu season" in Alaska; there is a "non-sun season" and a "sun season" every year. If each person achieved at least 50 ng/mL of 25(OH) D3, the NIH notes that the mortality rate from Covid-19 would be close to zero (0). <https://pubmed.ncbi.nlm.nih.gov/34684596/> To aid in the prevention of Covid-19, why are there not billboards, PSAs and planes towing banners promoting the regular use of Vitamin D3 (a critical fat-soluble secosteroid) and Zinc during the winter months in Alaska? The current Chief Medical Officer in Alaska does not mention Vitamin D3 to the public. Again the duty and the task fall on Dr. Farr and others² who encourage and

² The undersigned made an effort to inform the public by sending a letter to the editor published on August 1:

Letter: Vitamin supplements

Vaccines are not enough. Take care of yourself. Vitamin D3 and zinc help sustain one's immune system. Discuss with your health care provider taking, say, 5000 IUs of Vitamin D3 and 50 mg of zinc regularly, along with a balanced diet and vigorous exercise after a night of restful sleep. Take zinc with a hint of copper and an ionophore to get the zinc into your cells.

Alaska should create a contest to craft a catchy slogan like the "slip, slop, slap and wrap" campaign in Australia that encourages kids and adults to protect themselves against the sun and skin cancer. However, Alaskans need to address a lack of sun, and thus a lack of vitamin D3. For inspiration, think of the catchy first poem recited by some attentive seven-year-olds to their occasionally inattentive parents: "Click it or ticket." How about: "Got D 'n' Z?"

4

promote the intake of Vitamin D3. Hippocrates of Kos himself noted that if your shadow is longer than you are tall during the peak of the day, the Sun is not providing bioavailable Vitamin D.

The Board should reassert the primacy of the physician-patient relationship in Alaska. A physician prescribes and a pharmacist provides. Pharmacists are not trained to and should not practice medicine without training and a proper license. When a patient presents a prescription from a physician to a pharmacist in Alaska, the pharmacist should confirm the identity of the individual and provide the medication without question. This time-honored policy and practice protects pharmacists by providing certainty and relieving them of some ineffable yearning to second-guess the settled decision of the physician and patient and thereby deny treatment without explanation or recourse. If a pharmacist assumes the role of a physician and refuses to fill a prescription, does the Alaska State Medical Board or the Alaska State Board of Pharmacy have jurisdiction?

The Board should carefully consider the sound legal and medical analysis by the Attorney General for the State of Nebraska in Opinion Number 21-017 titled the "Prescription of Ivermectin or Hydroxychloroquine as Off-Label Medicines for the Prevention or Treatment of Covid-19" dated October 15, 2021. The conclusion in the forty seven (47) page analysis supported by three hundred and four (304) footnotes is

as follows:

[W]e address only the off-label early treatment options discussed in this opinion and conclude that the available evidence suggests that they might work for some people. Allowing physicians to consider these early treatments will free them to evaluate additional tools that could save lives, keep patients out of hospitals, and provide relief for our already strained healthcare system.

https://ago.nebraska.gov/sites/ago.nebraska.gov/files/docs/opinions/21-017_0.pdf at page 47. The Board should make a formal request for an official legal opinion from the Attorney General for the State of Alaska before proceeding with any action. Firing employees or forcing them to resign because of their principles or religious convictions at a time of chronic worker shortage is ill advised and counterproductive. Intentionally destroying an economy is devastating not only to the economy of the state but also to the health and welfare of the citizens. Covid-19 has done as much debilitating psychological harm to the populace as the physical damage.
Steven J. Shamburek

There are some out there who assert if you do not accept all of their medical mandates and their one-size-fits-all treatment option, then they will take action so that you do not get any medical attention of any kind. They assert their unilateral right to apportion medical care. That is mad. That is insane. That is criminal. That is a sign that the fear has broken them. They need psychiatric medical care and must be prevented from denying medical care to others.

To promote some sense of emotional equilibrium, the Board should encourage citizens to read Rudyard Kipling's "If" before bed at night and then get a restful night of sleep. <https://www.poetryfoundation.org/poems/46473/if-->
- And, according to the FLCCC protocol, consider taking 6 mg of melatonin prophylactically. <https://covid19criticalcare.com/wp-content/uploads/2020/11/FLCCC-Alliance-I- MASKplus-Protocol-ENGLISH.pdf>

Law students are blessed to take a sexy course in "Administrative Law" ("Bureaucracy Law"). The undersigned's instructor - a world authority on the FDA - more than two score years ago ([https://en.wikipedia.org/wiki/Richard A. Merrill](https://en.wikipedia.org/wiki/Richard_A._Merrill)) might not agree with some or even any of these contentions, yet he always supported honest inquiry.

As a society, we need to transition from this Pandemic to a controlled Endemic as quickly and painlessly as possible. Dr. Farr is spreading clearly accurate and possibly life-saving information to the public. Dr. Farr is making heroic contributions to the prevention and treatment of Covid-19. Dr. Farr should and must be allowed and encouraged to continue practicing medicine in Alaska. Clio will look kindly on Ilona's kindness.

Thank you for your attention to this matter. Best wishes.

Keeping my head when all about
me are losing theirs and blaming it
on moi, I remain,

Steven J. Shapburek

CC: Ilona

"Men [and women] fear thought as they fear nothing else on earth - more than ruin, more even than death. Thought is subversive and revolutionary, destructive and terrible, thought is merciless to privilege, established institutions, and comfortable habits; thought is anarchic and lawless, indifferent to authority, careless of the well-tried wisdom of the ages. Thought looks into the pit of hell and is not afraid ... Thought is great and swift and free, the light of the world, and the chief glory of man [and women]." Bert Russell, Why Men Fight

Subject: Support for Dr. Nolte & Dr. Farr

November 16, 2021

To the Members of the Alaska Medical Board:

As an Alaskan Citizen for over 40 years I am writing to you in support of Dr. Nolte and Dr. Farr and any other doctor in Alaska who has prescribed Hydroxychloroquine and Ivermectin for treatment of Covid.

You say that these early treatments for Covid don't work but I ask you where is the proof that any of these doctors had patients died because of these treatments? There are doctors in other states that have prescribed these treatments and the results are overwhelmingly successful and I know of several individuals personally who have benefited from this early treatment of Hydroxychloroquine and Ivermectin, they avoided going to the local hospital and have recovered. They had a right to choose their course of treatment!

It has become obvious that those in the medical field have an agenda to push these vaccines, that are untested experimental drugs, with vague statements of the harm these doctors are promoting with "misinformation". The actual truth proves otherwise. To have a pharmacy refuse to fill a prescription for Ivermectin or Hydroxychloroquine from a medical doctor is wrong. When a patient has an established relationship with their medical doctor and together they work to provide the best course of treatment for Covid for that individual then what right does a pharmacy have in refusing to fill those prescriptions or for a hospital to refuse to administer those medicines? They don't have an established relationship with the patient. Together with their medical provider a patient should have the right to choose what course of treatment they want to follow. We don't live in a "one size fits all" society.

I am in full support of these two fine doctors or any other doctors in Alaska who give their patients a right to choose what alternate treatments for Covid is best for them.

Sincerely,
Stephanie Farrelly

Subject: EARLY TREATMENT FOR COVID-19

Hello,

I would like to voice my total support for the LIFE SAVING METHODS BEING USED by some amazing Doctors here in Alaska!

Dr. Ilona Farr is an amazing caring true to the Hippocratic Oath Doctor.

What does the Hippocratic Oath say?

First, do no harm.

The Hippocratic Oath is one of the oldest binding documents in history. Written in antiquity, its principles are held sacred by (SOME) doctors to this day: treat the sick to the best of one's ability, preserve patient privacy, teach the secrets of medicine to the next generation and so on.

I believe the prescribing of EARLY TREATMENT FOR COVID-19 represents those who follow the Hippocratic Oath and are the Very Best and Most Caring of all Doctors in Alaska and across the World. In America and in Alaska we as patients should be given all of the options possible and these rights should not be taken away due to a few trivial self righteous Political Socialist type's that call themselves physicians!

We have the Right to Try and we shouldn't be ordered by anyone to put an experimental jab or an outdated chemotherapy into our bodies without our consent!

It's absolutely atrocious what is going on at our local hospitals. People have actually died due to these stupid administrative mandates!

All associated should be totally ashamed and discredited!

Also, regarding PHARMACY!!!

Pharmacists should be allowed and NOT afraid to dispense lifesaving medications due to a Political Socialist self righteous Board of Pharmacy!!! Shame on all of you!!!

I truly hope and pray that all or some of you on the Medical Board are of an open mind to Early Treatment & all possible treatments for COVID-19 .

I believe my husband and myself are here today because of early treatment including monoclonal infusions after contracting COVID-19 in October 2021. I do credit Doctor Ilona Farr for seeing us online via Telemedicine and making this a CHOICE which were able to decide on.

Please don't take away our rights to choose our own options in this fight of this terrible Virus!!!

Respectfully,

Glenna G. & Merrill DeLon Edwards

Subject: Early covid treatment

I am a local ICU RN and I am appalled that any action would be taken against a Physician who has a proven track record of saving lives from this virus. I know from working in ICU the ability of the hospital to actually save lives from covid. More people die than survive. I have watched them one after the other wondering why in God's name we didn't treat these people earlier before they got so sick. My own physician told me not to bring my husband to the hospital unless he was short of breath, his lips were blue, or he was half dead!!!! NO, NO NO My years in ICU have taught me we treat early, not late. How many lives have been lost because there was a political will to cancel any early treatment for covid? Instead of ganging up on Dr. FARR, perhaps all of your Drs. could learn a think or two. I thought you took an oath to save lives? Try living up to it.
Stop the Insanity, Beth Cabiad CCRN

Subject: Support Dr's. Farr, Nolte, and other health-care workers.

Dear Sir/Madam,

Please do not strip the license of any physicians or health- care workers from doing their practice in Alaska. The medical board has lost site of their goals. I thought physicians took an oath to help people get well and not allow them to die if at all possible.

The CDC and NIH have their place but not when creditable doctors, scientists, and patients have proof that a medication works. Ivermectin and chloroquine to name two.

We are a right to try state.

The fact that the medical board and Fauci are determined to not allow these to be used for the good speaks out loudly they are politically connected. Connected to money, power, and authority over the people is unconstitutional.

Let the doctors practice.

Sincerely
S. Waynette Coleman

Subject: Disciplinary action against local doctors

Dr. Ilona Farr is my primary health care provider and she has done nothing wrong by prescribing Ivermectin for Covid-19 patients. I'm impressed that she is willing to see patients with Covid 19 even if they are not existing patients. It's my understanding that many primary care doctors won't treat Covid patients. Please don't interfere with her practice of medicine. Thank you.

Subject: Protect Alaska doctors by improving not limiting access to early care

To the Office of the State Medical Board:

This is a first for me, in 29 years as a Physical Therapist, I have never felt the need to draft a letter to the medical board. What I read in the Anchorage Daily news on Sunday motivated me. I find the "call to arms", for AK health care workers to unite in asking the board to discipline our colleagues who have been providing early outpatient care for Covid patients in Alaska distressing for three specific reasons.

1. Failure to provide early treatment in Covid has been strongly linked to increased mortality in this disease. All doctors have taken an oath to do no harm. Refusing to provide care and actively seeking to prevent others from using their clinical reasoning skills to treat the inflammation, fever, and blood clots that make this virus so dangerous to some individuals, is indeed harmful. Sending patients home until the disease escalates to the point that they need supplemental oxygen is nonsensical and utterly lacking in compassion for our fellow human beings.
2. I am concerned that many physicians are overworked and stressed to the point that they lack the energy and time to do a vigorous study of the developing research regarding the effectiveness of early outpatient treatment. I can think of no other reason to call for such harsh measures against doctors, who acting in good faith have not harmed a single patient, and have helped hundreds. I would suggest that rather than disciplining these doctors the board would use its power to facilitate better communication and information sharing between all Alaskan health care providers. This should look like a "meeting of the minds" a recurring "grand rounds" where treatment strategies and case studies are freely discussed among local providers, not a top-down strategy dictating a one size fits all model of care. I believe this would improve cooperation between disciplines, reduce the strain on our hospitals, reduce fear and emotion-based decision making and improve patient outcomes.
3. The third reason I find this attempted action distressing is personal and related to my own experiences after my husband and I contracted Covid. Knowing I have an autoimmune disease I proactively secured Ivermectin just in case I contracted the virus. After receiving a positive test result, I began the treatment as prescribed, following dosages found in NIH Covid 19 Treatment Guidelines Table 2e. and FLCCC early outpatient treatment guidelines, I recovered fully in 5 days. My husband who is relatively healthy continued to struggle and deteriorate. The lack of out-patient care for covid positive patients in Alaska led us to contract care from outside the state when my husband's O2 saturation dropped below ninety. Upon auscultation he had crackles in his L lung and decreased breath sounds in the bases of both lungs, within 5 days of beginning Ivermectin therapy his dyspnea was gone; his lungs were clear and he was able to

work in the yard. I believe all Alaskans deserve access to these potentially lifesaving therapies and have the "Right to Try" medications their doctors recommend.

It is not "harmful misinformation" to state the fact that a safe and effective outpatient treatment regimen for covid -19 exists. I will emphasize the approach is not an uncomplicated recipe to be followed without the oversight of skilled medical providers, treatment recommendations change based on stage of disease and patient presentation. Hence the reason it is vitally important that we listen to our AK providers who have been treating this at the community level and encourage others to join them. Please don't hesitate to call me directly if you have any questions regarding the information I've presented.

Most Sincerely,
Pamela Mooty, PT

Subject: Medical freedom

To the Alaska Medical Board,

I cannot believe I am having to write to a medical board to ask for the right to medical freedom. We have been dealing with COVID-19 for more than 20 months and great strides have been made with regards to learning what works and what doesn't work. I want to have the freedom to choose my method of treatment and not have a politician tell me what I may or may not use. In specific, I want the freedom for pharmacies to fill prescriptions for Ivermectin and Hydroxychloroquine. I want hospitals in the state of Alaska to be held accountable for this dictatorship that is holding patients hostage and either killing them outright or letting them die while ignoring the patient's requests. How have we fallen so far that human life is no longer valued, that we have no compassion, that we sell our souls to the

devil for a profit? I support Dr. Farr and her colleagues who choose life and medical integrity, who choose compassion, who are willing to look at the truth and proclaim it. Please, Medical Board, choose well and turn your focus on those who withhold life-saving assistance. Look at the numbers and see who has success. Ignore the dollar signs that tempt you to throw your integrity aside. Please stand for truth! Thank you for your time.

Subject: Drs. Ilona Farr and John Nolte

Greetings Alaska Medical Board Members,

I have been troubled by recent articles in the Alaska Daily News, Alaska Watchman, and reports on several other media outlets pertaining to a group of “medical professionals” advocating some type of investigation of Doctors Ilona Farr and John Nolte by your organization because of their involvement with the *The Early Treatment Summit for Covid*. Apparently some of these “medical professionals” say they have seen what tragically happens when people come in to the hospital with Covid-19.

Since the outbreak of Covid-19 last year (2020), my husband and I have been taking various vitamins and supplements to boost our immune system in case we got the Covid-19. In September 2021, my husband and I both got infected with the Covid-19. We survived the Covid-19 with no problems without any prescription medications. Luckily, my husband and I are pretty healthy, even though we are over 60 years of age. We just continued the vitamins and supplements we had been taking and used Mucinex (OTC) for chest congestion. We were told by our doctor that they had an agreement with the local pharmacies that they would not send everyone who had tested positive with Covid-19 with a prescription to treat the Covid-19 infection. They said they would only prescribe a treatment medication if our symptoms got worse. It is a shame that doctors are telling their patients to go home and deal with it as best they can without any type of medication that could help them get over the infection without much of a problem. Is this the “treatment” that Dr. Leslie Gonsette and the other 100+/- doctors want us to have. What kind of “treatment” is that? It isn’t. Dr. Farr and Dr. Nolte want people to be informed of the facts which we are not getting from Dr. Gonsette

and the other 100+/- doctors that signed the petition against Dr. Farr and Dr. Nolte. They want us to know that there are things we can do to build our immunity against Covid-19. They want us to know that there are alternative treatments to Covid-19. In fact, it's not "alternative," because our government and medical organizations having done anything about telling people how to treat Covid-19. They have only been saying you have to get vaccinated. Our government and medical organizations also want to claim there is not natural immunity once you get Covid-19. From my and my husband's own experience, they are wrong — we now have strong antibodies against Covid-19. We now have natural immunity.

Dr. Leslie Gonsette claims "that she has seen the deadly consequences of vaccine misinformation firsthand through the illness and deaths of unvaccinated patients diagnosed with COVID-19." She is quoted as saying, "It's very shocking to see that the very people that are supposed to care for our community are actually pushing this agenda and indirectly actually causing deaths." Does Dr. Gonsette know for a fact that these people whom she has seen firsthand were patients of Dr. Farr or Dr. Nolte? How does Dr. Gonsette know for a fact that these deaths she witnessed firsthand were indirectly a result of Dr. Farr or Dr. Nolte? Maybe these deaths and illnesses could have been avoided if people's doctors had treated them before their illness became too advanced to be successively treated. Maybe their doctors told them, "Yes, you are positive for Covid-19. Go home and don't come back unless your symptoms get worse." Is that proper medical treatment? At least Dr. Farr and Dr. Nolte are trying to provide information for us to go and research so that we, as free Americans, can go and make an informed decision on our health care and medical treatments.

When Covid-19 arrived in February 2020, I just happened to be taking a HAZWOPER refresher course. The category that my training was on just happed to be respiratory. I learned that OSHA said cloth and fabric masks do not work against the spread of aerosols. WHAT!? It said the only thing that stops aerosol spread is a respirator. WHAT!? If that's the case, why were (and are) our government leaders and medical organizations forcing us to wear cloth/fabric masks when in fact it does not stop the aerosol spread of Covid-19. If Covid-19 was

such a hazard and so deadly, why was OSHA not requiring all employers to provide their employees and guests to wear respirators?

Question is, who are the ones spreading mistruths? Maybe these doctors that do not want people to be informed should look in the mirror when it comes to speaking mistruths. Just saying!

If ivermectin and hydroxychloroquine do not work in the treatment of people infected with Covid-19, then why do I know people who have used those medications and were quickly recovered from Covid-19? It is, in fact, a lie to say they do not work and I believe it is a danger when medical personnel will not give their patients information that they can research to make an informed decision as to their own health and medical care.

The data presented at the Summit, which I have researched independently, has all proven to be factual. Again, I do not see how providing people with information and/or options related to important personal decisions is a problem or how it violates the Hippocratic Oath (to do no harm) that physicians should live and practice by. Alternatively, I can see an argument that could be made on grounds related to the Hippocratic Oath (to do no harm) against a physician who desires to deny people information and/or to punish/silence those physicians who are providing said information.

Therefore, it is my opinion that Dr. Farr and Dr. Nolte should not be punished for the claims set against them that are before this panel and they should be able to continue to speak their opinions as is their right granted them under the U.S. Constitution.

Thank you for allowing me the opportunity to state my opinion.

Subject: Dr. Farr and Drs. Nolte are HEROS!!!!!! - for Nov 19 Meeting

Dear AK Medical Board,

The fact that I must write this letter is already a testament to how medical tyranny has taken hold of this country, and specifically Alaska.

As a medical professional myself I am appalled that there are medical professionals who would go to these lengths to demonize excellent doctors who are out on the frontlines saving lives and KEEPING PEOPLE OUT OF THE HOSPITAL by providing effective, early treatment for Covid-19. This nonsense has got to stop. It's a witch hunt.

It is unfortunate that there are still medical leaders who really don't get it! They do not see how Dr. Fauci colluded with big tech to censor and deplatform doctors. These doctors are best in their fields and have been teaching us since 2020 how to end the pandemic with early treatment using readily available medications. The obstruction of these medical treatments has led to the deaths of hundreds of thousands of Americans, not the other way around.

I followed these protocols, which have also been published in medical journals and are backed by medical research showing their efficacy. With early treatment, I was hiking Alaska's mountains fully recovered by the time I was contacted to tell me my Covid test was positive. I've seen this over and over and over again in friends and family.

Unfortunately, we now have crazy things happening where people are being denied access to these lifesaving measures and, instead of interrupting viral replication in the first seven days, they then suffer from the extensive cytokine storm that follows. This is unnecessary and a travesty.

I understand some medical people are exhausted and have seen a lot of death, and are fearful. But Dr. Fauci created this mess and they would not be seeing death like this if early and aggressive treatments were readily available and easily accessible in Alaska. It is a travesty. The powers that be have aggressively done everything possible to obstruct vital medical information about these interventions that WORK.

We are Alaskans! I am interested in results, so if it works it works. I really could care less if the media tries to malign Ivermectin as horse dewormer. It works for Covid-19 period.

This tyranny has to stop. We all know the CDC, FDA and NIH are corrupted and there has been a breakdown in processes. I have pulled VAERS queries myself on vaccine injuries for 0-17 year olds and it made me feel like vomiting because it is so horrific. Children have 99.998% recovery from Covid-19 without treatment, and don't carry and spread the disease, yet as of 11/8/21...

- Twice as many deaths and permanent disabilities have been reported in children 0-17 years old from the Covid-19 injection in 2021 than the past ten years combined from polio vaccines.
- In 2021, there are 25x's more deaths, 50x's more permanent disabilities, and 130x's more adverse events in children 0-17 y/o reported from the Covid-19 injection than from polio vaccines.
- As of 11/8/2021, there are 23,189 adverse events reported in VAERS for children 0-17 years old after receiving the Covid-19 injection.

I personally did these queries myself. The nature of the adverse events were disgusting and any ONE of them should have been enough to stop the program! These injections are resulting in widespread injury, clotting and inflammation from spike proteins - like being flogged with Alaska's Devil's Club on the inside. This affects all vital organs ... brain, heart, lungs and virtually all body systems eyes, ears, nerves, muscles, GI, etc. Here's a list of just some of what I found in those 23,000 events in children 0-17:

- Death
- Blood clotting
- Brain swelling

- Brain bleeds
- Strokes (clots in brain)
- Seizures
- Amnesia, cognitive changes
- Heart Attacks
- Heart muscle inflammation (Myocarditis)
- Heart lining inflammation (Pericarditis)
- Lung inflammation & pain (Pleurisy)
- Pulmonary Embolism (lung clots)
- Difficulty breathing, Respiratory Failure
- Kidney Failure
- Multi-Organ Inflammatory Syndrome
- Guillain Barre Syndrome
- Paralysis
- Severe muscle spasms and tremors, muscle twitching
- Swelling
- Severe joint & muscle pain
- Severe skin reactions
- Anaphylactic Shock
- Blindness or visual disturbances
- Deafness or ringing in ears
- Menstrual disruption or hemorrhaging
- Diabetes

Look it up yourself! STOP INJECTING KIDS!!!

This is criminal, and on top of it, people who are suffering with vaccine injury have been disregarded, censored, and attacked and there are already over 18,000 deaths from the injection. Where the heck did informed consent go?

Don't even get me started. I have durable, long-lasting and broad spectrum natural immunity yet you all sit back and allow us to be treated like social outcasts. This attack on great doctors is just another symptom of medical tyranny.

Please stand up for what is right! Take courage. Once Dr. Mengele Fauci is indicted for criminal activity, this delusion will break and all of you will be found complicit in crimes against humanity, particularly the children, if you do NOT do what is right! It is absolutely sick what is already in the data that FDA and CDC are in charge of. Of course they know what is going on. They are liars. They are the ones killing people with their "recommendations". The public knows this. It's the medical people that can't wake up and swallow the red pill and take a hard look at what has and is happening.

Dr. Farr and the Noltes are HEROS, HEROS, HEROS! Don't you dare discipline them, suspend, or revoke their license. Don't you dare. We will never forgive an egregious witch hunt like that and will not tolerate the absurd and heinous attack on our medical freedom!

Regards,
Robyn Bjork, Medical Specialist

Subject: FW: Alternative Covid-19 treatments by local doctors

Dear Medical Board:

We would like to make written comment in opposition to any action taken against any doctor or medical person trying to help a patient with alternative treatment for Covid-19. We do not understand your reasoning for having this scheduled meeting this week pertaining to possibly revoking Alaskan doctor's licenses who practice early treatment for Covid-19. This is a blatant witch hunt in our Great State of Alaska.

Alaska is a "Right to Try" State, we should have our rights for options of early treatment of Covid-19 with Ivermectin, Hydroxychloroquine and Azithromycin. Also the early on-set of Covid, administering of the Monoclonal Antibody Treatment with only one treatment center in Anchorage for the entire state.

We respectfully ask that you reach beyond the government protocol and open up to what these alternative treatments have accomplished and have to offer in saving lives. This is a reason why you as doctors have taken an oath to examine what is before you.

Thank you,

Harry and Jean Holt

Subject: STOP THE WITCH HUNT!

DEAR ANGRY ALASKA STATE MEDICAL BOARD,

I DO NOT SUPPORT YOUR REVENGEFUL, ANGRY "WITCH HUNT" ON ALASKA DOCTORS (DR. IONA FARR AND DR. NOTLE ALONG WITH OTHERS) WHO HAVE SAVED COUNTLESS LIVES OF PEOPLE WITH COVID, BECAUSE THEY PRESCRIBE THE IVERMECTIN COCKTAIL!! "THIS IS NOT A VERY NICE THING TO DO."

THE IVERMECTIN COCKTAIL SAVED MY LIFE!!

I AM ASSUMING THE **ANGRY DOCTORS** AND THE **ANGRY STATE MEDICAL BOARD** ARE ANGRY BECAUSE A LOT OF ALASKANS ARE CHOOSING TO FIND A DOCTOR WHO WILL TREAT EARLY COVID SYMPTOMS (IVERMECTIN COCKTAIL), TO SAVE THEIR LIFE RATHER THAN CHOOSING A DOCTOR WHO **WILL NOT TREAT** EARLY COVID SYMPTOMS AND LET THEM DIE! THE RESULT? **DOCTOR'S ARE LOSING MONEY...LOTS OF MONEY...**

I **COMMEND** THE ALASKA DOCTORS WHO ARE SAVING PEOPLES LIVES FROM COVID BY USING THE IVERMECTIN COCKTAIL. THESE ARE DOCTORS **WHO DON'T CARE** ABOUT MAKING \$415,000.00 FOR EACH COVID PATIENT THEY ADMIT TO A HOSPITAL TO LET THEM DIE.

DID YOU KNOW CONNECTICUT HOSPITALS OFFER IVERMECTIN?!!! (YES, **IVY LEAGUE DOCTORS!**)

DOCTORS IN ALASKA MAKE \$415,00.00 FOR EACH SICK COVID PATIENT THAT IS ADMITTED TO THE HOSPITAL IN ALASKA. THE **HOSPITALS** ALSO MAKE A LOT OF MONEY. PATIENT'S ALMOST ALWAYS DIE IN THE HOSPITAL. PATIENTS ARE **WORTH MORE DEAD** THAN ALIVE IN THE HOSPITAL!!!

IT IS THE HOSPITAL ADMINISTRATORS THAT ARE REFUSING DOCTORS FROM USING IVERMECTIN IN THE HOSPITALS. **THEY ARE DEPRIVING CRITICALLY ILL PATIENTS OF LIFE SAVING TREATMENT! THIS IS CRIMINAL!** THIS MUST BE ADDRESSED. THEY ARE NOT DOCTORS!!

A COVID VACCINATION IS ALSO IMPORTANT, BUT ONLY WHEN WE HAVE A SAFER COVID-19 VACCINE, LIKE THE "NOVAVACC." IT SHOULD BE AVAILABLE SOON. THE NOVAVACC IS MADE MORE LIKE OUR TRADITIONAL VACCINES, LIKE THE FLU SHOT. THIS IS WHAT THE AMERICAN PEOPLE WANT.

INTERESTING....

PFIZER'S NEW ANTI-VIRAL COVID TREATMENT IS IVERMECTIN!!!! (WHAT DOES THAT TELL YOU? MAYBE, FOLLOW THE MONEY?????)

ANOTHER BIG PROBLEM – PHARMACIES REFUSING A DOCTOR'S PRESCRIPTION TO FILL IVERMECTIN. ARE YOU AWARE THAT **ALL CORPORATE PHARMACY CHAINS** WANT TO **KNOW IF A PHARMACIST IS REFUSING TO FILL PRESCRIPTIONS?** THIS IS ILLEGAL, PRACTICING MEDICINE WITHOUT A MEDICAL LICENSE AND **CORPORATE LAWYERS KNOW THIS!!** :-)

SO, WHAT IS HAPPENING NOW? LOT'S OF LAWSUITS BEING FILED!!!!

--ATTORNEYS ARE NOW SUING HOSPITALS OVER "THE RIGHT TO TRY"

--DOCTOR'S ARE NOW SUING HOSPITALS THAT PREVENT THEM FROM USING HIGHLY EFFECTIVE COVID-19 TREATMENTS TO CRITICALLY ILL, TERMINALLY ILL COVID PATIENTS! **THESE ARE DOCTORS THAT HONOR THE HIPPOCRATIC OATH.**

DR. PAUL MARIK, IS ONE OF THE MOST HIGHLY PUBLISHED CRITICAL CARE PHYSICIANS IN THE "WORLD" AND THE DIRECTOR OF THE ICU AT SENTARA NORFOLK GENERAL HOSPITAL IN VIRGINIA, **FILED A LAWSUIT RECENTLY** IN THE CIRCUIT COURT IN THE CITY OF NORFOLK, VIRGINIA.

THE COMPLAINT states that Sentara Healthcare is "preventing terminally ill COVID patients from exercising their right to choose and to receive safe, potentially life-saving treatment determined to be appropriate for them by their attending physician." Under Virginia law, every patient has the right to receive treatment deemed appropriate for them by their attending physician, and terminally ill patients have the right to try investigational medicines that their treating physician recommends. Through its arbitrary prohibition of the COVID-19 treatment protocol developed by Dr. Marik and his colleagues, states Sentara Norfolk General Hospital is **violating the law** and unjustly depriving critically ill patients of lifesaving treatment.

“This case is about doctors, having the ability to honor their Hippocratic Oath, to follow evidence-based medicine, and to treat our patients the best we know how. Corporations and faceless bureaucrats should not be allowed to interfere with doctor-patient decisions, especially when it can result in harm or death.” according to Paul Marik, MD, chief, Division of Pulmonary & Critical Care Medicine, Eastern Virginia Medical School, who practices in the Sentara Norfolk General Hospital. “I refuse to watch another patient die from COVID-19 knowing that I was not allowed to give them proven treatments that could have saved their life.”

The Hippocratic Oath

According to a 1989 survey, barely half of U.S. medical schools used any form of the Hippocratic Oath and only 2% used the original.

Today’s doctors face a number of important ethical issues that are not included in the Hippocratic Oath. For example, it makes no mention of:

- Honoring patient’s preferences
- Sharing medical information with patients
- Avoiding conflicts of interest, such as profiting by ordering **UNNECESARY tests or treatments**
- Protecting patients who enroll in research studies
- Treating all patients equally, regardless of the ability to pay, social class, education, race, or suspicion of criminality
- Avoiding the practice of medicine while impaired (due to physical or psychological disease).

HOW MANY DOCTORS IN ALASKA UPHOLD SPECIFIC MEDICAL ETHICAL STANDARDS?
I KNOW FOR SURE DR. IIONA FARR AND DR. NICK NOLTE UPHOLD THE HIPPOCRATIC OATH, SPECIFIC ETHICAL STANDARDS.

THE DOCTORS WHO DO NOT UPHOLD THE HIPPOCRATIC OATH ARE THE ANGRY DOCTORS AND THE ANGRY MEDICAL BOARD WHO ARE CONDUCTING A WITCH HUNT TO PUNISH DR. IIONA FARR, DR. NICK NOLTE AND OTHER MEDICAL DOCTORS WHO PRESCRIBE THE IVERMECTIN COCKTAIL TO SAVE PEOPLE’S LIVES FROM COVID. STOP THE WITCH HUNT NOW!

Subject: Early treatment

The track record of doctors providing early treatment of covid through the use of ivermectin, zinc, hydroxychloroquine, and many other helpful drugs has proven very safe with no deaths (none caused by their prescribed regiments) according to the records I have read from state to state. Obviously I can't read them all by myself, but the records so far have shown huge success. Meanwhile, the health centers providing no early treatment and refusing to use these treatments have a track record of many covid deaths and have become infamous for not only mistreating their patients, but also close relatives of the patients.

Even the famous doctor Robert Malone, the pioneer of mRNA technology used to produce these covid vaccines, has publicly supported the successful studies and even uses ivermectin for his own health on top of the vaccines he has taken for covid. He urges doctors to provide these vital early treatments to patients instead of turning them away until they have become deathly ill. He also warns there has not

been enough research to show these vaccines are safe for children and suggests these only be used for adults currently.

Patients have a right to choose alternative treatments with FDA approved drugs for themselves. Any attempt to bar citizens from this right will only show how uncaring and corrupt our medical institutions have become. Please treat our good doctors who provide early treatment with the same respect you would want to be treated with and allow them to continue their life-saving endeavors.

Respectfully,
Tara

Subject: Proposed Investigation Regarding Information on Covid-19

To whom it may concern:

It is my understanding that doctors are being challenged and even potentially having their licenses revoked for not falling into line with treatment protocols pushed by big pharma. From the research that I have done recommended treatments and the "vaccines" have not been scientifically tested to a level that proves that they work and do not harm patients. From the NIH website Remdesivir that is a recommend treatment has been associated with high numbers of acute renal failure
- <https://pubmed.ncbi.nlm.nih.gov/33340409/>

Other options that have shown positive results and have been around for years; proven safe to give to people are being overlooked and doctors persecuted for having a different opinion and giving their patients options for treatment.

It is my right as a patient to make decisions regarding my healthcare and treatment; not be forced into taking drugs that have not been proven safe or effective in the treatment of a virus. If I were to need prescribed medicine to treat Covid-19 I would much rather go with an option that is proven not to cause organ failure.

To go after doctors following their hippocratic oaths to provide safe healthcare and not just blindly following untested and unproven drugs is egregious and unethical.

Please listen to my plea to not condemn doctors that are looking for options. Nothing has been proven to treat this virus 100%; not even the so-called "vaccines" that are still being tested on humans because of an emergency order.

Thank you,
Brian

Subject: Thoughts to consider about the COVID situation

Dear folks-

Attached are my comments and thoughts about the present situation with "COVID misinformation."

Sincerely,
Joan Priestley, MD

Joan Priestley, MD to the members of the Medical Board-

Dear Medical Board members-

I have worked as a medical doctor in Alaska for the past 30 years. I am writing to express my great concern about recent efforts of citizens who are filing complaints against physicians, stating that these doctors are spreading "misinformation" regarding the COVID virus situation.

According to our local daily newspaper, more than 100 physicians have petitioned our Medical Board to investigate medical purveyors of "Covid misinformation." Many writers of complaints have accused particular doctors of spreading "misinformation" about COVID treatments. Yet, I have not found anyone who is willing to explain what statements, exactly, constitute "misinformation."

The people lodging complaints appear to be encouraging our Medical Board to issue sanctions against the "misinformation spreaders" in our ranks. Such sanctions could include suspension- and even revocation- of a doctor's license to practice medicine, for violating **AS 8.64.326** (*Grounds for Imposition of Disciplinary Sanctions*).

I am confident that you are all aware of the jurisdictional and procedural limitations that our legislature placed on the Medical Board about twenty five years ago, in **AS 08.64.326(8)(A)**. This statute states that:

The board may impose a sanction if the board finds after a hearing that a licensee . . . (8) has demonstrated (A) professional incompetence, gross negligence, or repeated negligent conduct; **the board may not base a finding of professional incompetence solely on the basis that a licensee's practice is unconventional or experimental, in the**

Joan Priestley letter about "Covid misinformation"

absence of demonstrable physical harm to a patient.
(Emphasis added).

Several effective (and even curative) early treatment protocols have been developed months ago, for people with symptomatic COVID infection. I encourage Board members to review the Frontline Covid Critical Care Alliance website- covid19criticalcare.com for a detailed explanation of various, successful combination drug and nutrient therapies.

The Critical Care Alliance has created protocols for early treatment, advanced disease treatment, hospital treatment, prophylactic (preventive) treatment, and even treatments for "Covid long haul" patients. America's Frontline Doctors is another very informative website. Closer to home, the AlaskaCovidAlliance.com recently held a one day conference on early treatments, and has posted a video of all the presentations on its website.

If doctors in Alaska choose to utilize these other, effective treatment protocols, are they spreading "misinformation," or are they just engaging in the practice of "unconventional or experimental medicine," that is protected by **AS 08.64.326(8)(A)**? Please advise.

Conversely, if a doctor refuses to prescribe these life saving protocols, and thereby allows a patient needlessly to die, is he or she engaging in an incompetent and negligent practice, that poses an immediate danger to the public health?

As a knowledgeable physician, do I have a duty to file a complaint to the Medical Board, against such a fellow MD? I am confident that your considered advice on this important matter would be most appreciated, by all medical doctors practicing in Alaska.

Joan Priestley letter about "Covid misinformation"

I am also especially concerned that Alaska Medical Board members may be thinking about imposing a blanket, prior restraint on non-commercial, professional speech, that is Constitutionally protected as a First Amendment right. Such action would clearly be beyond the scope of authority of our Medical Board members.

I have no doubt that you will be inundated with many shrill voices, during your meeting on November 19th. They will be clamoring for punishment to physicians who are guilty of publicizing positions that are contrary to the perspective espoused by the AMA, the FDA and the CDC. Please note that the cries of even 1,000 ignorant voices do not transform a lie into the truth.

In this context, the label of COVID “misinformation” seems to be a vague and even opaque “weasel word,” that can take on any meaning desired by a promoter. An opinion that is not lockstep aligned with the position of the CDC or other agencies is not automatically “misinformation.” Therefore, the medical community can greatly benefit, if you will precisely define what statements, exactly, constitute COVID “misinformation.”

Please refer to the attachments that I have included, with this comment to you. I am asking our Medical Board members to define and explain exactly what statements are “misinformation,” that we should avoid. If such minority positions are supported by peer-reviewed, published studies, will you still consider those factual statements to be “misinformation”? If so, why?

Over the last 21 months, I have personally read and archived hundreds, soon to be thousands, of peer-reviewed studies and other well-researched articles, about every aspect of this COVID pandemic. If I make public statements based on those references, could I actually be

Joan Priestley letter about “Covid misinformation”

accused by our Medical Board of “spreading misinformation”? Please advise.

Lastly, I wish to bring your attention to an unwarranted position taken by the Federation of State Medical Boards, in its recent press release about Covid “misinformation.” (Exhibit 1)

“[Physicians] have an ethical and professional responsibility to practice medicine in the best interests of their patients and must share information that is factual, scientifically grounded and consensus-driven for the betterment of public health.”
(Emphasis added)

“Consensus-driven”? Science is not a popularity contest. Scientific advancement has occurred mainly when independent researchers have courageously questioned and challenged the “consensus-driven” opinion- not when they bowed down to it.

In earlier times, the “consensus opinion” that dominated the “settled science” decreed that the earth was flat; it was the center of the only known universe; and the sun revolved around it. Galileo, Copernicus and Columbus all went against the prevailing “consensus opinion” of their day.

They were just lucky that they were not burned at the stake, for spreading their obvious heresies. Now, authorities are more genteel in the techniques that they use to quash dissent. Instead of burning flesh, only reputations and livelihoods are singed.

However, there are MANY unanswered questions concerning this pandemic:

Joan Priestley letter about “Covid misinformation”

1. The value of using universal masking- especially forcing children to wear masks all day long, (Exhibit 2)
2. Standing 6 feet apart,
3. Obsessive hand washing and counter cleaning, with caustic agents,
4. The impact of taking Vitamin D, zinc and other supplements,
5. Limiting gatherings,
6. Lockdowns of healthy people, (Exhibit 3)
7. Closing schools,
8. Using small plastic barriers everywhere,
9. The wisdom of vaccines for everyone, and especially vaccines in children- who are at virtually no risk of hospitalization or death from this disease (CDC stats show that the survival rate in this age group is **99.9997%**, or **1 death per 333,000** infections),
10. The sometimes severe and even fatal vaccine side effects,
11. Identifying people who are at high risk of damage from the vaccines,
12. The fact that vaccines do not seem to offer much protection against the new "Delta variant" of Covid 19, that is now causing 98% of infections in the US,
13. The fact that new Israeli and UK and Ireland studies show that the vast majority (**89%**) of severely ill and dead patients are fully vaccinated,
14. How fast does vaccine-acquired immunity really wane,
15. The protective effect of natural immunity,
16. Prophylactic treatments,
17. Early treatment with Hydroxychloroquine and especially Ivermectin- the real elephants in the room. (Exhibit 4)

As physicians, we need to have the freedom and confidence that we can debate these issues openly and honestly, and provide our considered professional opinions, without fear of undue censorship and other inappropriate, retaliatory measures by our governing agency.

Joan Priestley letter about "Covid misinformation"

That is the only useful strategy to advance our knowledge and understanding of innovative treatments for this ongoing, unprecedented situation.

Thank you for your consideration of my thoughts on this important topic.

Sincerely,

Joan Priestley, MD

Turney v. State, **936 P.2d 533**, 542 (Alaska 1997}.

"The Alaska Supreme Court held that three factors are to be considered in deciding whether a statute is unconstitutionally vague:

(1) whether it is 'so imprecisely drawn and overbroad that it 'chills' the exercise of [F]irst [A]mendment rights,' (2) whether it gives adequate notice of the conduct prohibited, and (3) whether imprecise language encourages arbitrary enforcement by allowing prosecuting authorities undue discretion to determine the scope of the statute's prohibitions."

FSMB: SPREADING COVID-19 VACCINE MISINFORMATION MAY PUT MEDICAL LICENSE AT RISK

WASHINGTON, D.C. (July 29, 2021) - The Federation of State Medical Boards' Board of Directors released the following statement in response to a dramatic increase in the dissemination of COVID-19 vaccine misinformation and disinformation by physicians and other health care professionals on social media platforms, online and in the media:

"Physicians who generate and spread COVID-19 vaccine misinformation or disinformation are risking disciplinary action by state medical boards, including the suspension or revocation

Exh 1

of their medical license. Due to their specialized knowledge and training, licensed physicians possess a high degree of public trust and therefore have a powerful platform in society, whether they recognize it or not.

They also have an ethical and professional responsibility to practice medicine in the best interests of their patients and must share information that is factual, scientifically grounded and consensus-driven for the betterment of public health. Spreading inaccurate COVID-19 vaccine information contradicts that responsibility, threatens to further erode public trust in the medical profession and puts all patients at risk."

For more information about how state medical boards and the FSMB are responding to the COVID-19 pandemic, visit FSMB's webpage dedicated to providing resources and information to states and the public about COVID-19.

About the Federation of State Medical Boards: The Federation of State Medical Boards (FSMB) is a national non-profit 501(c)(3) organization. It claims to represent the medical boards within the United States and its territories, that license and discipline allopathic and osteopathic physicians and, in some jurisdictions, other health care professionals.

The FSMB serves as the self-appointed voice for state medical boards, supporting them through education, assessment, research and advocacy while providing services and initiatives

To: Board, Medical (CED sponsored) <medicalboard@alaska.gov>

Subject: Drs. Farr and Nolte

To whom it may concern:

As an Alaskan physician, it is highly inappropriate even consider disciplinary actions against physicians who have done absolutely nothing wrong. This is a purely politically motivated issue. Who says the doctors that are making this complaint are correct? Look at how many lives have been saved by Drs. Farr and Nolte compared to how many lives have been lost by the CDC protocol that all the physicians at Providence and Regional following. They have no leg to stand on.

How can providing early treatment be dangerous? We do it in all areas of medicine. A huge percentage of medications prescribed today are off label use. It's the norm in medicine. I guarantee that the psychiatrist who wrote this complaint letter has written tons of off label use prescriptions for her patients. Prozac was initially approved for OCD only. Use for depression was off label. I'd look into that if you want something to do.

When did differences of opinions in medicine turn into this insanity? Do we kick residents out of their training program with disciplinary actions when there is a differing opinion in M&M meetings? No, we learn from each other.

I suggest you look into the zealots who raised this issue with the board rather than their intended targets.

I was the first physician of my sub-specialty to come to Alaska and I am the most experienced in Alaska. If you entertain this discipline request at all, you will start to see a mass exodus of highly trained physicians leaving Alaska. We have to be protected by our Board to be successful. We have enough issues with patients, we don't need to turn on each other.

Thank you,

Marc Beck MD
